1 INTRODUCTION

The United Nations Convention on the Law of the Sea (UNCLOS) was open for signature on December 10, 1982 in Montego Bay, Jamaica. Its Article 306 predicted that the Convention was subject to ratification.

The Republic of Angola acceded to the Convention and is signatory since December 10, 1982, and ratified it on December 5, 1990.

Being a signatory and ratifying the United Nations Convention on the Law of the Sea (UNCLOS), Angola established the Project of the Continental Shelf Submission of Angola (PEPCA) through the Interministerial Commission for Delimitation and Demarcation of Maritime Spaces of Angola (CIDDEMA).

Acknowledging the possibility of pacifically extending its sovereign rights over a submarine territory and with the support of the international community represented by the Member States of the United Nations, Angola spared no efforts to fulfill the requirements of UNCLOS. The project involved not only the preparation of a detailed Desktop Study to ensure the relevance of its continental shelf extension but also a specific oceanographic, geological and geophysical survey using vessels with state of the art technology; to obtain and systematically process the data onboard and coupled for further analysis and interpretation onshore.

The Project, initially, aimed to compile all pre-existent data on the Angolan continental margin for the preliminary understanding of its physiography, geology and geophysics in the context of the geological evolution of the South Atlantic and to evaluate the relevance of the Angolan continental shelf extension. Past data acquired using multi-channel seismic (from the database of the Angolan oil exploration company SONANGOL) and single-beam bathymetry, gravimetry and magnetometry values, and core data throughout the margin, were compiled.

The results of this compilation showed that indeed Angola had the right to extend its submarine territory, as well as the scarcity of systematic information on the continental margin of Angola, in the north and, mainly, in the south. It was found that the profiles contained in the public domain databases were not sufficient to provide an adequate

understanding of important parameters for the application of the Law of the Sea according to Article 76 of the *Scientific and Technical Guidelines* of the Commission on the Limits of the Continental Shelf (CLCS/11 - May, 1999). Moreover, the knowledge derived from the compilation of data on the continental margin was not enough for the full understanding of the geological processes acting on it. It became clear that specific additional surveys had to be done on the Angolan margin. Hence, came about the planning of geophysical surveys in order to fill the existing knowledge gaps and systematize, technically and temporally, data collection using state of the art positioning and geophysical systems, onboard a multipurpose geophysical ship and a geophysical ship for multichannel seismic acquisition. The multipurpose geophysical ship profiled 30,000 km operating five geophysical systems simultaneously; multi-beam bathymetry, single-channel seismic, high resolution bathymetry by a 3.5 kHz sub-bottom profiler, magnetometry and gravimetry. In addition, it performed seismic refraction data collection with sonobuoys.

The multi-channel seismic geophysical ship, on the other hand, obtained 15,000 km of deep penetration data throughout the entire continental margin of Angola.

The obtained dataset allowed an insight never before seen of the Angolan margin, showing rare peculiarities when considering other continental margins of the Atlantic. The Submission Report of the Government of Angola to the United Nations for the extension of the continental shelf is based on the integration of data from the geophysical survey with previously compiled data.

Initially presented in the Submission Report are the results of the compilation, acquisition and processing of the data that substantiated the interpretation. The physiography, geology and geophysics of the continental margin are explained through maps of bathymetry, geological and sedimentary processes, sediment thickness (isopachs), as well as gravity and magnetic geophysical maps.

The main outcome of the integrated analysis of all these data was the identification of large turbiditic complexes throughout the continental slope of Angola formed by canyons/channels connected to the mainland drainage systems and the occurrence of large deposits from submarine landslides and mass transport deposits (MTDs) induced by gravitational processes.

With the understanding of the margin morphology and the geological and geophysical processes that occurred, the base of the continental slope could be defined by

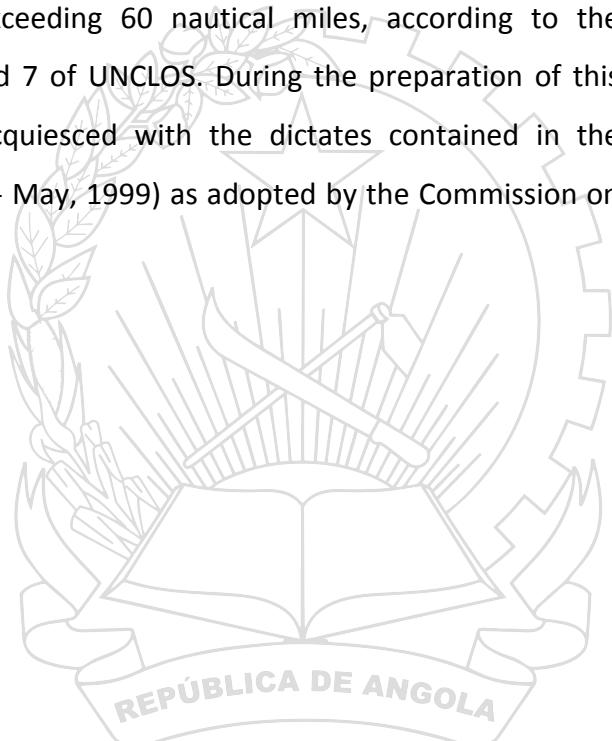

applying the General Rule. The other legal parameters of Article 76 could then be characterized, culminating in the formulation of the outer limit of the Legal Continental Shelf of Angola, comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea through the natural extension of its continental mass to the outer part of the continental margin as stipulated in Article 76 of UNCLOS.

The Main Body of the Submission Report summarizes the necessary information for the application of the Law of the Sea and is complemented by 08 (eight) annexes where a wide and detailed discussion of the matters is presented.

2 PROVISIONS OF ARTICLE 76

The establishment of the outer part of the continental margin of Angola where it extends beyond 200 nautical miles from the baseline, from which the Territorial Sea is measured, was made according to the provisions of Article 76, paragraphs 3, 4 (a) ii and 4 (b) of UNCLOS. The outer limit of the extended continental shelf was delineated with fixed points connected by straight lines not exceeding 60 nautical miles, according to the provisions of Article 76, paragraphs 5, 6 and 7 of UNCLOS. During the preparation of this Submission, the Government of Angola acquiesced with the dictates contained in the *Scientific and Technical Guidelines* (CLCS/11 - May, 1999) as adopted by the Commission on the Limits of the Continental Shelf.

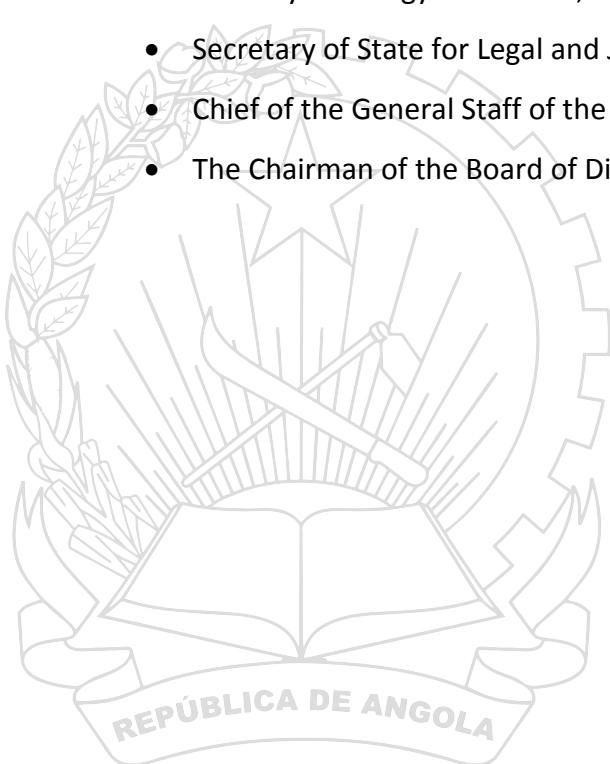

3 ANGOLAN INSTITUTIONS RESPONSIBLE FOR THE SUBMISSION PREPARATION

The Government of the Republic of Angola entrusted the Project for the Extension of the Continental Shelf of Angola to the Interministerial Commission for the Delimitation and Demarcation of Maritime Spaces of Angola (CIDDEMA) with the Ministry of National Defense of Angola as the Coordinator. The other Ministries that are part of the Interministerial Commission are:

- Ministry of Petroleum;
- Ministry of Foreign Affairs;
- Ministry of Interior;
- Ministry of Justice and Human Rights;
- Ministry of Transport;
- Ministry of Fisheries;
- Ministry of Geology and Mines;
- Ministry of Environment;
- Ministry of Energy and Water;
- Secretary of State for Legal and Judicial Affairs of the President;
- Chief of the General Staff of the Angolan Armed Forces;
- The Chairman of the Board of Directors of SONANGOL, EP.

4 PARTICIPATION OF MEMBERS OF THE COMMISSION ON THE LIMITS OF THE CONTINENTAL SHELF

Regarding the Submission, the Republic of Angola was advised by Mr. Galo Carrera Hurtado, member of the Commission on the Limits of the Continental Shelf of the United Nations.

5 ABSENCE OF DISPUTES

While there may be overlap of areas in the extension of land borders towards the sea of adjacent and opposite States to Angola in the north, this Submission Report was made without prejudice to the delimitation of these extensions from the concerned States and in accordance with paragraph 10 of Article 76 that reads: *"The provisions of this article are without prejudice to the question of delimitation of the continental shelf between States with opposite or adjacent coasts"*.

6 THE OUTER LIMIT OF THE EXTENDED CONTINENTAL SHELF

The data submitted by Angola in support of this Submission determine that the outer limit of the continental margin of Angola extends beyond the 200 nautical miles from the baseline, from which Territorial Sea is measured, in a wide area of 379,443.84 Km². **FIGURE 1** shows the total area of the extension beyond the 200 nautical miles claimed by the Government of Angola, as well as its outer limit. **FIGURE 2** shows a regional view of the entire Extended Continental Shelf submitted by the Republic of Angola.

The outer limit of the Extended Continental Shelf of Angola totals 417 fixed points, which form a set of segments connected by straight lines not exceeding a distance of 60 nautical miles between them.

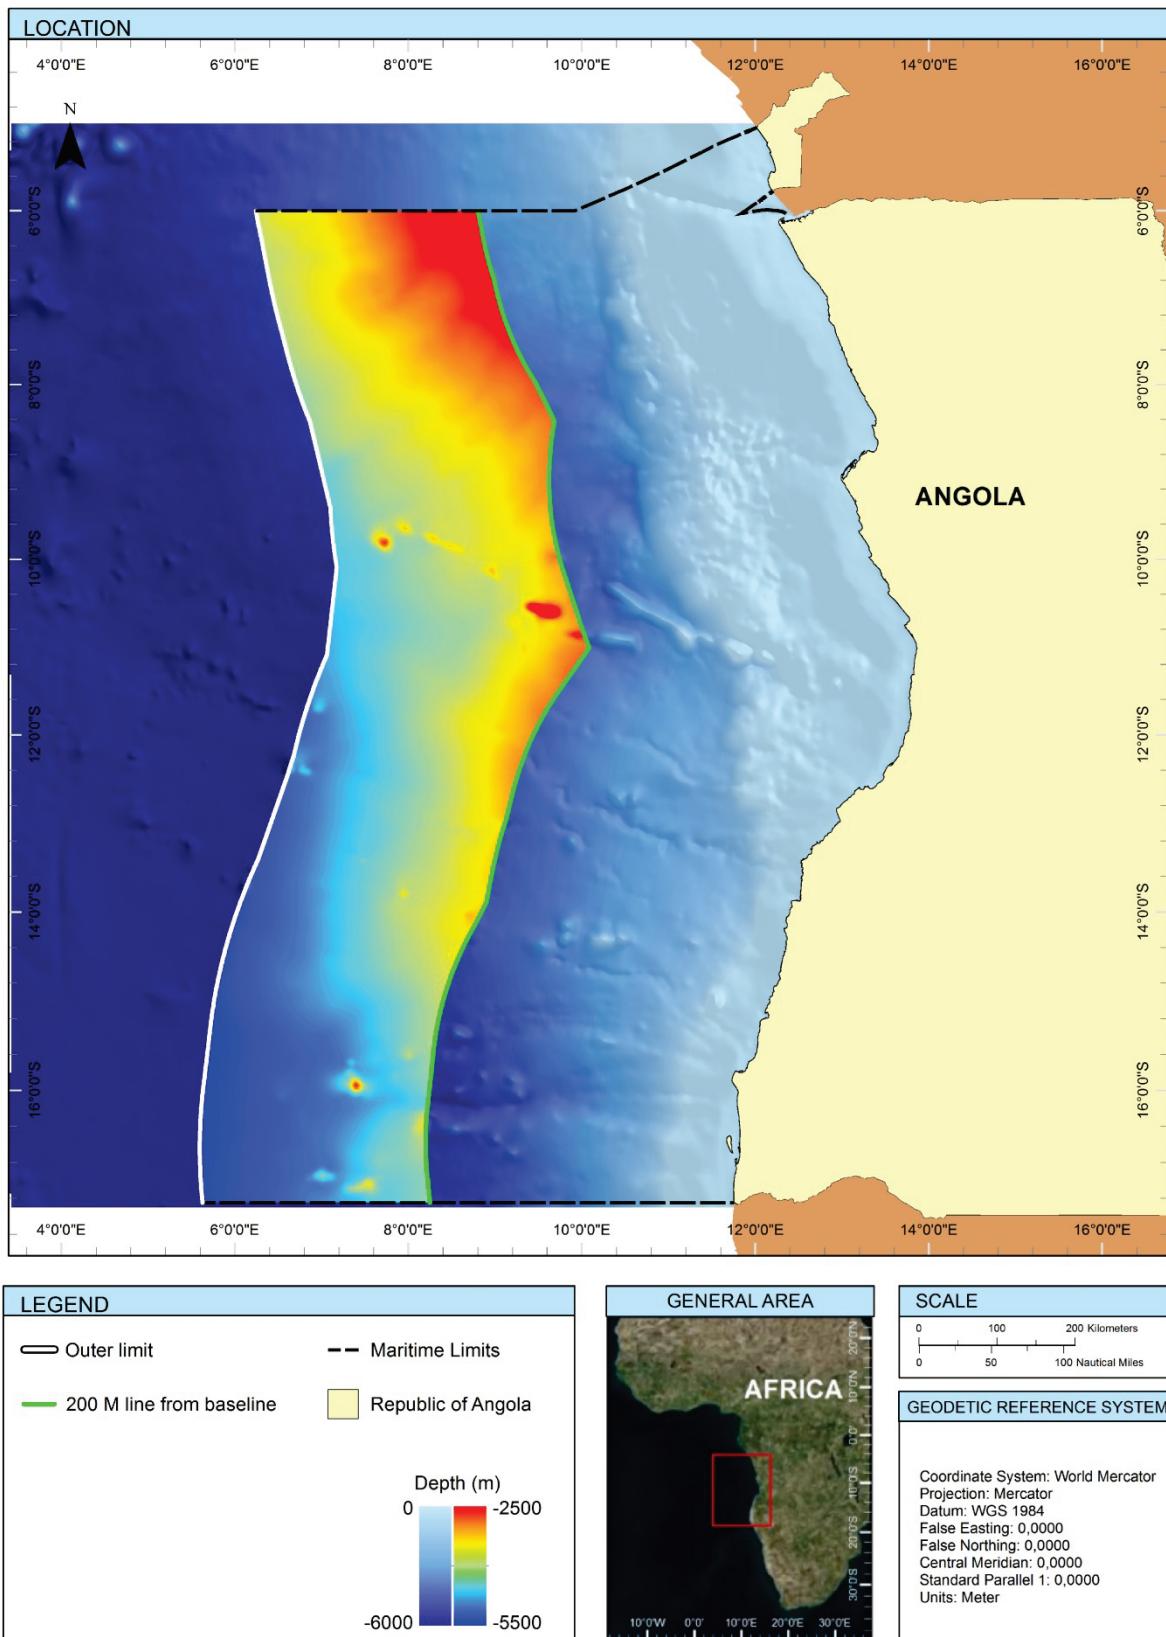

Figure 1: The outer limit and the extension of the Legal Continental Shelf of Angola.
Total area: 379,443.84 km².

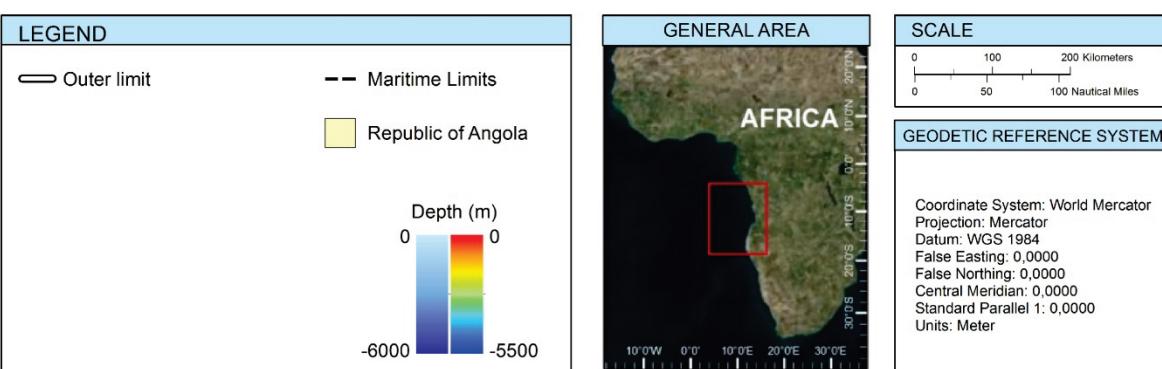

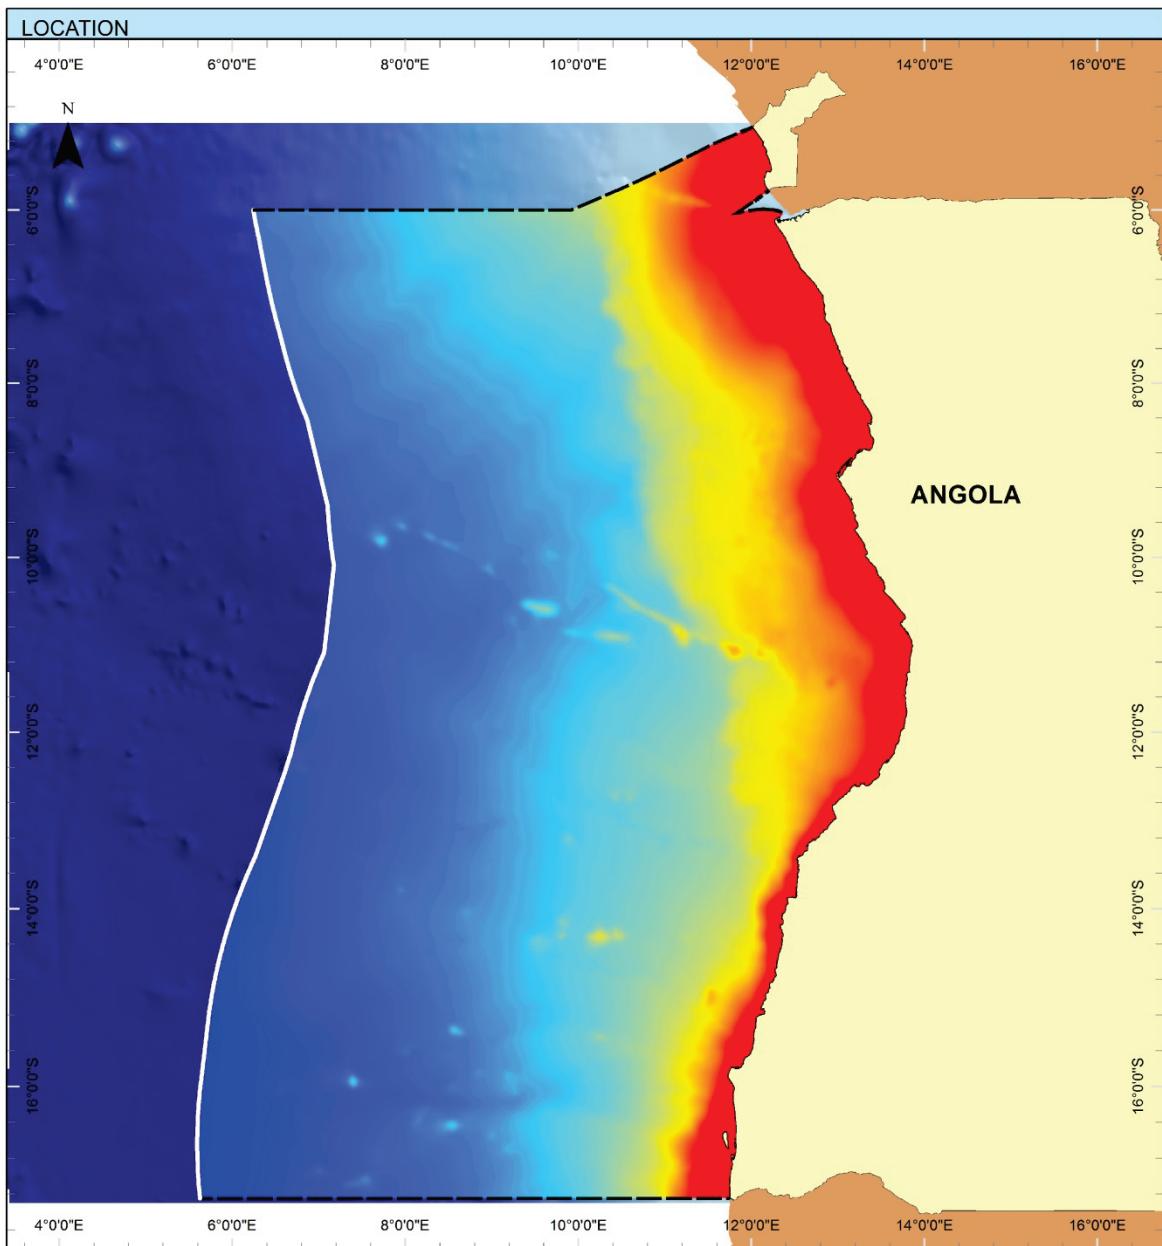

Figure 2: The Extended Continental Shelf of Angola. Total area: 919,834.79 km² (EEZ and the extension).

7 LIST OF THE OUTER LIMIT FIXED POINTS

TABLE 2 lists, through identifier numbers and position, the 417 fixed points that comprise the outer limit of the Extended Continental Shelf of Angola according to the provisions of Article 76 of UNCLOS. The distance in nautical miles from one fixed point to the previous is given in the far right column of the table. The position of the fixed points is given in latitudes and longitudes (decimal degrees, WGS 84) and Mercator projected coordinates (meters).

The geodetic reference system parameters used are listed below (**TABLE 1**):

Table 1: Geodetic reference system used in the Submission Report of Angola.

Geodetic datum	WGS-84	
Ellipsoid	WGS-84	
	Semi-major axis (a)	6,378,137.000 meters
	Semi-minor axis (b)	6,356,752.314 meters
	Inverse flattening (1/f)	298.2572236
	Eccentricity sq. (e^2)	0.006694380
Projection		
	Mercator (0N)	
	Origin latitude	00° 00' 00.000" North
	Origin longitude	00° 00' 00.000" East
	Origin false easting	0
	Origin false northing	0
	Scale factor	1
	Grid unit	Meters
