

COOK ISLANDS

Outer Limits of the Continental Shelf beyond 200M

- Fixed Points FOS+60M
- Fixed Points 350M
- Fixed Points 2500m+100M
- Fixed Point Cook Islands 200M
- Fixed Points Other States' 200M
- Straight Lines Connecting Fixed Points
- 350M Contour
- Foot of Slope + 60M
- 2500m + 100M
- 2500m Isobath (ETOPO1)
- Cook Islands EEZ
- Other States EEZ

ETOPO1 Bathymetry

1:3,000,000
Projection: Geographic
Datum: WGS 1984

1. This map was created using ESRI ArcGIS 9.3 and Geopac AS GIS software with spatially correct data referenced to the World Geodetic System 1984 Spheroid, Semimajor Axis: 6378137.000000, Semiminor Axis: 6356752.3142455, Inverse Flattening: 298.257224
2. The background gridded bathymetry is derived from ETOPO1, a public domain data set obtained from the National Oceanic and Atmospheric Administration's (NOAA) National Geodetic Data Center (NGDC).
3. The area of Cook Islands' extended continental shelf is depicted by the un-shaded area.
4. Depiction of 200m lines other than the submitting State is based on the best available data at the time of analysis and should not be taken to signify acceptance or endorsement by the Cook Islands of the validity of international law of another State's basepoints from which they are drawn.
5. The term, "extended continental shelf" is used to refer to that part of the continental shelf defined under Article 76 of the Convention that lies beyond 200M from the territorial sea baselines of the Cook Islands.
