

Empirical evidence on long-term global trends in income inequality

Joe Hasell

Oxford Martin Programme on Global Development

The Chartbook of Economic Inequality

- Sources of long-run distributional data

Household survey data (income, consumption)

– National data

– Harmonized collections:

- Povcal
- LIS
- SEDLAC
- EU-SILC
- 'All the Ginis'
- WIID/SWIID

Some more 'harmonized' than others!

- Povcal

Gini index, around 2015

- Global trend

- Regional trends

Trends in the average economic inequality within countries, by world region – 1988-2013

Source: The World Bank (2016) – Poverty and Shared Prosperity 2016: Taking on Inequality, Reformatted for OurWorldInData.org
Original data source: World Bank calculations based on data in Milanovic 2014; PovcalNet (online analysis tool).

- Global inequality

Decomposition of global inequality between and within countries, 1988–2013

- Top incomes

Global Bottom 50% and Top 1% income shares, 1980–2016

Source: WID.world (2017). See [wir2018.wid.world](#) for data series and notes.

- Top incomes

Income share of top 1 % vs Gini index

Source: Top income shares: World Inequality Database. Gini: PovcalNet (Russia & Brazil); LIS Key Figures (UK); Bourguignon 2016 (world).

- Absolute differences

Relative and absolute income increases across the global distribution, 1988–2008

(a) Relative increase

(b) Absolute increase

- Absolute differences

Data source: Lakner and Milanovic (2015) – *Global Income Distribution: From the Fall of the Berlin Wall to the Great Recession*, World Bank Economic Review.

'Other Asia' refers to Asia without India, China, Hong Kong, Israel, Japan, Korea, Singapore, and Taiwan.

'Developed countries' are the EU-27, Australia, Bermuda, Canada, Hong Kong, Iceland, Israel, Japan, Korea, New Zealand, Norway, Singapore, Switzerland, Taiwan, and the United States.

The categorisation of countries is stable over the entire time period 1988-2011.

The data visualization is available at [OurWorldinData.org](https://ourworldindata.org). There you find more visualizations on this topic.

- Extreme absolute poverty

Distribution of people between different poverty thresholds, World

Poverty thresholds are all in 'international dollars' at constant 2011 PPP prices. This means all figures account for cross-country differences in price levels, as well as for inflation. Estimates rely on a combination of income and consumption data (see sources for details).

Source: World Bank

Note: Estimates for high-income countries are included, but are not always comparable with those from other countries because of differences between income and consumption data.

- No single 'story'

Change in Gini index, 2005-2015 (Povcal)

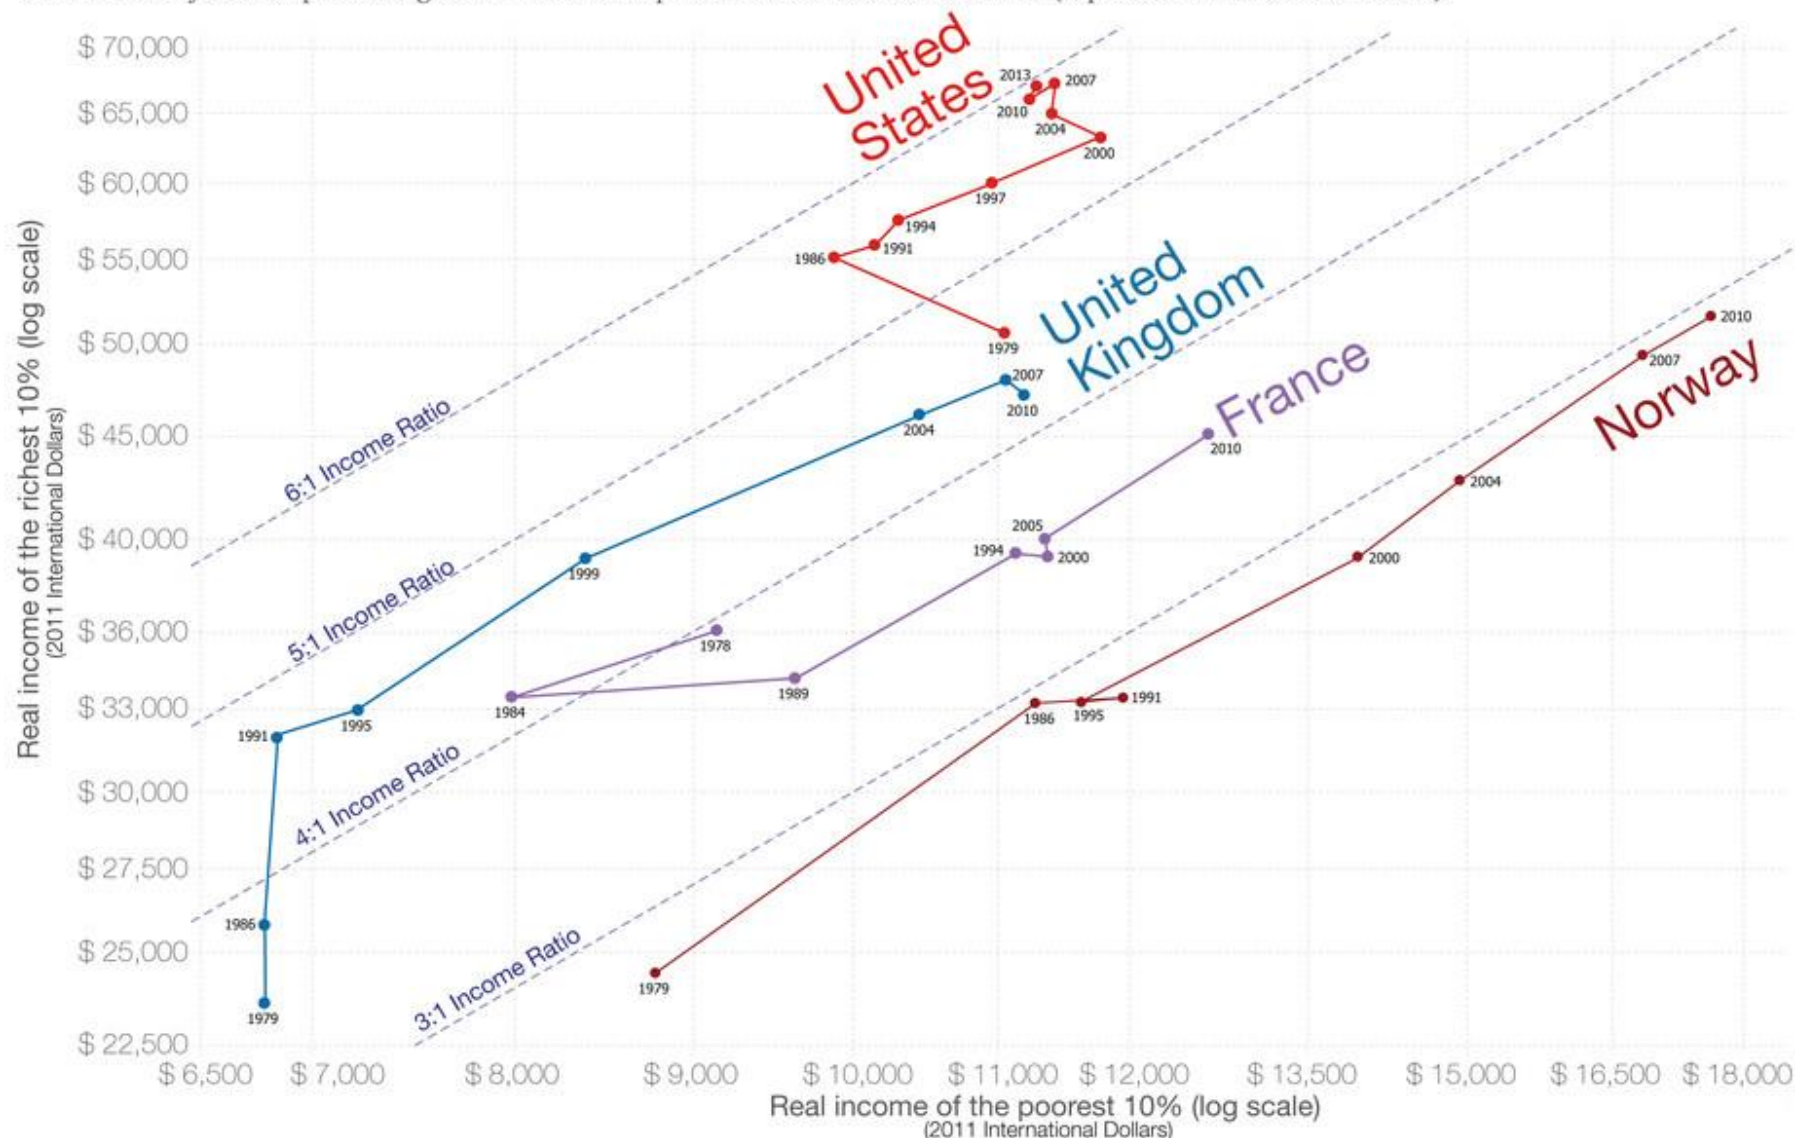

- No single 'story'

Gini index of disposable household income in Latin American countries (SEDLAC)

Income growth of the poorest 10% vs income growth of the richest 10%

Incomes are real disposable household incomes. Shown is the income cutoff between the richest and poorest 10% and the rest of the population. Incomes are adjusted for price changes over time and for price differences between countries (expressed in international dollars).

Data source: 'Incomes across the Distribution Database' by Stefan Thewissen, Brian Nolan, and Max Roser. Based on LIS data.

The data visualization is available at OurWorldinData.org. There you find the raw data and more visualizations on inequality and growth.

- Conclusions
 - To say something *global* => comparability issues
 - Missing top incomes from survey data
 - Within-country inequality ‘small’ in context of global inequality
.... but increasingly less so!
 - Different metrics => different perspectives
 - Top incomes shares
 - Absolute differences
 - Extreme poverty
 - Large degree of heterogeneity between countries:
‘Globalization’ doesn’t cut it
=> National policy counts
