United States.

The average number of children that would be born per woman if age-specific fertility rates of that period are used is known as the average completed family size or total fertility. The average number of children that would be born per woman if age-specific fertility rates of that period are used is known as the average completed family size or total fertility.

Contraceptive prevalence

Data pertain to all sexually active women in the reproductive age group, or to all married women of reproductive age, or to women who have had at least one birth, depending on the country.

A value of 100,000 live births in the less developed regions. In contrast, the maternal mortality ratio was 20 maternal deaths per 100,000 live births in the less developed regions. In contrast, the maternal mortality ratio was 20 maternal deaths per 100,000 live births in the less developed regions.

Grounds on which abortion is permitted

- To save the woman's life
- To preserve physical health
- Rape or incest
- Foetal impairment
- Mental disorder of necessity

Additional requirements may relate to the gestational limits within which abortion may be performed, and to the expectation that the woman will be informed of her medical condition and receive appropriate medical care. In some cases, the woman may be required to consent to an abortion or to undergo counselling. In addition, even when abortion is legally permitted, access to abortion services may be limited.

Five countries, abortion is not permitted. Abortion laws and policies are significantly more restrictive in the more developed regions than in the less developed regions of the world.

On request

Incest

Impairment

Division, United Nations Demographic Yearbook (various issues). The number of women aged 15-44 were derived from United Nations statistics. The number of women aged 15-44 were derived from United Nations statistics.

Interpretation. In the more developed regions, 88 per cent of countries permit abortion to preserve physical health, whereas fifteen per cent of countries in the less developed regions make abortion available on the same grounds.

Also, some countries may include spontaneous abortions in the number of reported abortions. In countries where abortion is restricted, official statistics are generally not available or highly incomplete. Information on the average completed family size and the contraceptive prevalence is generally not available or highly incomplete. Information on the average completed family size and the contraceptive prevalence is generally not available or highly incomplete.
