

Corrigendum to *Model-based Estimates and Projections of Family Planning Indicators 2015*

10 June 2015

Two corrections were made in the Excel file “Model-based estimates and projections: Countries” to rectify inadvertent errors in the file initially released online 21 May 2015:

1. Estimates and projections for the table on the number of women with an unmet need for modern methods included the wrong set of figures. These are now corrected.
2. Estimates and projections for the time period 2003-2030 were missing from the table on the number of modern method users. These are now included.
