World Population Monitoring

Adolescents and Youth

A Concise Report

United Nations
DESA

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which Members States of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

Note

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

The term “country” as used in the text of this publication also refers, as appropriate, to territories or areas.

The designations “more developed”, “less developed” and “least developed” for countries, areas or regions are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.
Preface

This report presents an overview of the demography of adolescents and youth, including a description of current and expected trends for that population: their experience in regard to marriage, childbearing and the use of contraception; challenges to their health and survival; and their participation in international migration. It also presents recommendations for action to ensure that young people have access to the services and guidance they need to make crucial life transitions safely and participate more fully and effectively in society. The recommended actions would also contribute to accelerating the achievement of the goals and objectives of the Programme of Action of the International Conference on Population and Development in regard to adolescents and youth.

This report was prepared by the Population Division of the Department of Economic and Social Affairs of the United Nations and presented to the Commission on Population and Development at its forty-fifth session, in April 2012.

On the basis of the deliberations, the Commission on Population and Development adopted resolution 2012/1 on “Adolescents and youth”. The full text of the resolution is presented in an annex to this report.

Introduction

1. Adolescence is the period of transition between childhood and adulthood. Adolescence is considered to begin with puberty, a process of physical, psychological and emotional development triggered by a cascade of endocrine changes that lead to sexual maturation and reproductive capability. In girls, a key marker of puberty is menarche — the first menstruation — but there is no such clear marker in boys. In girls, the mean age at menarche is between 12 and 13 years in developed countries,¹ and it is likely similar or higher in developing countries. In boys, signs of sexual maturation become evident at around 13 or 14 years of age. Among both girls and boys, the start of puberty can vary by four or five years around the mean. Although puberty generally lasts two to four years, there is no strict definition of when adolescence begins and ends. In many societies, adolescents and young people are expected to remain in school for long periods and legal provisions set the age of majority generally at age 18 or higher. Therefore, one approach to determining the period of adolescence would be to focus on persons aged 12 to 17 years.

2. Similarly, there is no established definition of youth. In preparing for the first International Youth Year in 1985, however, the report of the Advisory Committee for the International Youth Year (A/36/215, annex) noted the following: “A chronological definition of who is young, as opposed to who is a child or who is an adult, varies with each nation and culture. However, the United Nations, for statistical purposes, defines those persons between the ages of 15 and 24 as youth without prejudice to other definitions by Member States.” The use of 15 as the lower bound for youth, instead of 18, was indeed driven by statistical considerations, since data are very often available only in terms of age groups that span five years. In practice, studies on adolescents and youth have defined those groups flexibly. The main focus in the present report is on young people aged 12-24, but the term “adolescents and youth” will refer to varying age groups owing to data limitations.

3. Among the 1.6 billion persons aged 12-24 in 2012, 0.85 billion are aged 18-24. The overall number of adolescents and youth is expected to change little over the coming decade and, provided that fertility and mortality levels in developing countries continue to decline, may remain relatively stable over the rest of the century. The population aged 12-24 is still increasing rapidly in Africa, however, while it is declining, or will soon decline, in all other regions. Consequently, the proportion of the world’s adolescents

---

and youth living in Africa is expected to rise from 18 per cent in 2012 to 28 per cent by 2040, while the shares of all other regions will decline. The region comprising Asia and the Pacific is expected to experience the sharpest decline, from 61 per cent in 2012 to 52 per cent by 2040.

4. Most adolescents and youth live in a different world from that in which their parents grew up. Compared to young people 20 years ago, adolescents in 2012 are healthier and more likely to spend their adolescence in school, to postpone entry into the labour force and to delay marriage and childbearing. Because change is not happening at the same pace everywhere, however, there are also growing disparities among adolescents and youth within and across countries. In particular, young people who live in poverty face major disadvantages. They are more likely to work as children, to never attend school or to drop out of it, to engage in risky sexual behaviours and to marry and bear children early.

5. To reduce disparities among young people, it is urgent to focus on the services that can make major differences in their lives. Declining fertility and improvements in child health have increased demand for schooling. Ensuring universal primary education and expanding enrolment at the secondary level can yield many dividends, especially with regard to improving skills for productive employment, reducing risky behaviours and developing habits that can influence health for the rest of young people’s lives. To reap the greatest benefits from education, both its length and contents are important. More than ever before, young people need not only to be taught, but to be active participants in learning and to develop the behavioural skills that living in rapidly changing societies requires.

6. The adolescents and youth of today are central to realizing development that is sustainable and equitable. Greater investments in their education, health and labour market opportunities can shape the well-being of tomorrow’s adults and, in the process, ultimately narrow the gaps between countries with regard to human development. The present report provides a demographic overview of adolescents and youth, beginning with their numbers and share of the working-age population because the absolute and relative sizes of youth cohorts have consequences for the demands placed on public sector services and the supply of labour. The report also describes their family formation patterns, sexual and reproductive health, main causes of morbidity and mortality and selected aspects of migration, and presents recommendations to improve outcomes for adolescents and youth in those key population-related areas.
Chapter I

Trends in the population of adolescents and youth

7. Globally, the number of adolescents and young people is at an all-time high, but that number might not increase much more in coming decades if global fertility continues to decline. In 2012, the world had 1.6 billion persons aged 12-24, of which 721 million were adolescents aged 12-17 and 850 million were youth aged 18-24 (see table 1). Provided that global fertility and mortality continue to decline, the numbers in both age groups are projected to remain within narrow ranges during the rest of the century, varying between 721 million in 2015 and a peak of 762 million in 2030 in the case of adolescents, and between 835 million in 2020 and 884 million in 2065 in the case of youth. In 2040, the world is expected to have 755 million adolescents and 883 million youth.

2 All estimates presented in sect. II are derived from World Population Prospects: The 2010 Revision — Extended Dataset (United Nations publication, Sales No. 11.XIII.7), DVD.
8. The relative stability of global numbers of adolescents and youth masks important changes by region (see figure 1). Whereas in most regions the numbers of both adolescents and youth are expected to decline or change little over the coming decades, they will increase markedly in Africa (by 62 per cent and 70 per cent by 2040, respectively). As a result, Africa’s share of the world’s adolescents and youth will rise from 18 per cent in 2012 to 28 per cent in 2040, and could reach 41 per cent by 2100. The fast growth in the number of young people in Africa will likely have profound social and economic implications because it is occurring in places where the proportion of youth who are unemployed and the proportion of working youth who are poor are higher in comparison with adults.  

9. The population aged 12-24 is declining or will soon decline in all major regions except Africa. In developed countries the number of adolescents and youth is falling fast, at -1.4 per cent annually. Increases in fertility in recent years plus net migration gains at younger ages, however, will reduce the speed of decline and even lead to short periods of growth in the future. In Asia and the Pacific, the population aged 12-24 is declining at -0.6 per cent annually and reductions are projected over the foreseeable future. In Latin America and the Caribbean, the number of adolescents and youth is increasing slowly, at 0.2 per cent annually, but is projected to decline at an accelerating rate after 2015.

10. In sharp contrast, the population aged 12-24 in Africa is rising at 1.9 per cent annually and will continue to grow rapidly well beyond 2040 even if Africa’s fertility falls from 4.5 children per woman today to 3.1 children per woman by 2040. A slower fertility decline will produce a more rapid increase of that population.

11. The future stabilization of the number of adolescents and youth is not assured. Even small differences in future fertility can mean major changes in their numbers. For the population aged 10-24 to fluctuate between 1.8 billion and 1.9 billion over the rest of the century, global fertility must drop from 2.5 children per woman in 2010 to 2.0 in 2100. If future fertility were to remain at a rate of just 0.5 children per woman higher than those levels, the population aged 10-24 could rise to 2.3 billion in 2040 and 3.4 billion in 2100. If fertility were to drop faster and remain at a rate of about 0.5 children per woman lower than the path described above,

---

4. Data for different fertility projection variants are available only for five-year age groups.

the population aged 10-24 could decline to 1.5 billion by 2040 and to 0.9 billion by 2100 (see figure II).

Figure II
Population aged 10-24 according to three projection variants, 1950-2100

12. There is concern about the high proportion of young people in the population, yet globally that proportion peaked in 1985 at 26 per cent. As a share of the “working-age” population aged 12-64, they reached a maximum in 1975 at 39 per cent. That year, both Asia and the Pacific and Latin America and the Caribbean also saw their share of young people aged 12-24 among persons aged 12-64 peak, at 42 and 44 per cent respectively. In developed countries the maximum was reached in 1970 at 31 per cent. Even in Africa, the share of young people in the working-age population was highest in 2000, at 45 per cent. Today, the share of those aged 12-24 among persons aged 12-64 is decreasing in all regions and is expected to continue dropping, provided the reduction of fertility in developing countries continues (see figure III).
13. Currently, persons aged 12-24 still comprise a major share of the working-age population. That share is highest in Africa (43 per cent), followed by Asia and the Pacific and Latin America and the Caribbean (33 per cent in each) and by developed countries (23 per cent). By 2040, persons aged 12-24 are projected to constitute 27 per cent of the population aged 12-64 worldwide, with 35 per cent in Africa, 25 per cent in both Asia and the Pacific and Latin America and the Caribbean, and 23 per cent in developed countries.

14. Globally, males outnumber females among people aged 12-24, with 106 males for every 100 females. The proportion of males is lowest in Africa and in Latin America and the Caribbean, at 102, and highest in Asia and the Pacific at 109. In developed countries the proportion of males among young people is 105.
Chapter II
Marriage

15. Marriage is a major milestone on the path to adulthood. Historically, in most societies marriage marked the start of a couple’s reproductive life. Currently, societies vary considerably with respect to whether or not marriage coincides with the beginning of childbearing. In addition, consensual unions have been a common alternative to marriage in many societies and the date of their formation may not be as clear as that of formal marriage.

16. When life expectancy was low, many children died early in childhood and maternal mortality was high, societies encouraged early marriage to maximize the reproductive life of couples. Today, life expectancy is high by historical standards in all countries and the vast majority of children survive to adulthood. Moreover, the importance of providing a minimum period of schooling to all children is a universally shared goal. As the years of mandatory schooling increase and societies provide more options for young people to work and be productive, the aspirations of young people rise and they tend to postpone marriage. In addition, it is well established that bearing children too early in life carries greater risks for both mothers and children. Societies have acknowledged that it is better to postpone marriage until women and men reach adulthood by adopting laws setting a minimum age at marriage. Thus, among the 187 countries with information on the minimum legal age at marriage, 158 allow women to marry without parental consent at age 18 or higher and 180 allow men to marry without parental consent at age 18 or higher.

17. Although the majority of countries forbid women from marrying before age 18 without parental consent or the approval of a pertinent authority, there are 29 countries where marriage without such approval can occur earlier. Sixteen of those countries are in Asia and the Pacific, seven are in Africa and two are in the Caribbean, while the remaining four are developed countries. In seven of those countries, women as young as 15 can marry without parental consent. In addition, the laws of at least 146 countries allow women under 18 to marry provided their parents or a pertinent authority approve and in at least 27 of those countries the age at marriage can be lower than 15. In the case of men, 107 countries allow marriage before age 18 with the consent of parents or a pertinent authority.

18. In a number of countries a significant proportion of women marry at very young ages either because their laws allow early marriage with parental consent or because enforcement of the minimum legal age at marriage is
In some countries, laws might include exceptions for some ethnic or religious groups or forms of marriage. Data from recent surveys conducted in 80 countries indicate that in 23 of them at least 10 per cent of women aged 20-24 at the time of the interview had married before age 15. Among those countries, 16 were in Africa, 5 were in Asia and the Pacific and 2 were in Latin America and the Caribbean. The association, however, between the percentage of women marrying at young ages and the minimum age at marriage allowed with parental consent is weak (see figure IV). Even when the minimum age at marriage with parental consent was 15 or 16, several countries had a high proportion of young women who had married before age 15. Furthermore, in countries where no minimum age was stipulated for women marrying with parental consent, the percentage of young women married before age 15 varied markedly. This evidence suggests that legislative action is not sufficient to reduce the prevalence of early marriage among women. When parents allow or even promote the early marriage of their young daughters, delaying marriage hinges on changing the views of parents regarding the acceptability of early marriage and addressing the real or perceived benefits associated with it.

Figure IV
Percentage of women aged 20-24 who married before age 15 versus minimum legal age at marriage with parental consent, by region
19. When girls have access to education they are less likely to marry early. Thus, the higher the level of illiteracy among women aged 15-24, the higher the propensity to marry early. Furthermore, the percentage of women aged 20-24 who had married before age 15 tends to be higher in countries with a low proportion of girls completing primary education (see figure V) and, according to surveys, the propensity of women to marry early is higher among women with no education or primary education than among those with secondary education. When societies value the education of girls, marriages tend to be delayed.

Figure V
Percentage of women aged 20-24 who married before age 15 versus percentage of girls completing primary education, by region

20. Globally, the age at marriage has been increasing and, consequently, the proportion of young people who have ever been married has been decreasing (see table 2). In 1990, 18 per cent of women aged 15-19 had ever been married, but by 2005 only 15 per cent had. For men, the equivalent proportions were 4 per cent and 2 per cent, respectively. At ages 20-24, the proportion of ever-married young people declined from 60 per cent to 51 per cent among women and from 31 per cent to 23 per cent among men. Differences in the timing of marriage among regions are marked, especially for women. In 2005, the regions with the highest percentage of ever-married
women among those aged 15-19 were West and Middle Africa, at 33 per cent and 29 per cent, respectively, South Asia at 28 per cent, East Africa at 26 per cent and Central America at 20 per cent. In contrast, delayed marriage in developed countries has meant that even, among women 20-24, only 26 per cent have ever been married or have lived in a consensual union. The postponement of marriage is also common in Southern Africa and East Asia, where only 23 per cent and 37 per cent, respectively, of women aged 20-24 in 2005 had ever been married.

Chapter III

Childbearing and sexual activity among adolescents and youth

21. The start of marriage or a consensual union is generally related to the wish to procreate, therefore fertility levels among adolescents are closely associated with the percentage who are married or in union. Data for 82 countries, including 42 in Africa, show that adolescent birth rates rise with the percentage of ever-married women aged 15-19 (see figure VI). The adolescent birth rate has declined in all regions since 1990, but it is still high in Africa at 101 births per 1,000 women aged 15-19 in 2008, in South Asia at 77 births per 1,000 and in Latin America and the Caribbean at 73 births per 1,000. Globally, the adolescent birth rate was 56 births per 1,000 in 2008 — more than double that of developed countries, which was 24 births per 1,000.\textsuperscript{5}

Figure VI

Adolescent birth rate versus the percentage of ever-married women aged 15-19

\textsuperscript{5} World Population Prospects.
22. Young mothers account for important proportions of all births. In 2010, 12 per cent of the 135 million children born that year were born to women aged 15-19, and a further 32 per cent were born to women aged 20-24. In Africa and in Latin America and the Caribbean, 15 and 18 per cent, respectively, of all children were born to young mothers aged 15-19. In Asia and the Pacific and in Latin America and the Caribbean, 47 per cent of all children were born to women aged 15-24, and in Africa, the figure was 42 per cent. Young mothers’ share of all births was lower in developed countries, at 25 per cent.5

23. In many societies young people become sexually active before marriage. Data for 53 countries, including 31 in Africa, indicate that the share of women beginning sexual activity before marriage is large. Thus, the percentage of women aged 20-24 at the time of interview who reported having begun sexual activity before age 20 is generally higher than the percentage who married before age 20 (see figure VII), with the exception of a few countries in Asia. Because contraceptive use is low among adolescent women, early initiation of sexual activity, whether after marriage or before, is associated with higher levels of adolescent fertility (see figure VIII).

Figure VII

Percentage of women aged 20-24 who were sexually active before age 20 versus those who married before age 20

![Diagram showing percentage of women who were sexually active before age 20 compared to those who married before age 20, categorized by region: Africa, Asia and the Pacific, LAC, Developed countries.](image-url)
In many countries, sexual activity begins in early adolescence, before age 15, and males tend to start earlier than females. In the 82 countries reporting data (mainly in Africa and in Latin America and the Caribbean), the percentage of males aged 15-19 who became sexually active before age 15 surpasses that of females in 55 countries (see figure IX). In 27 of the countries considered, at least 15 per cent of adolescent females had become sexually active by age 15 and in 36 countries, at least 15 per cent of adolescent males had done so. Initiation of sexual activity in early adolescence has been linked to a higher likelihood that coercion or force was used than when sexual activity begins at older ages, and such coercive experiences are associated with a host of negative outcomes, such as risky sexual behaviours that heighten the likelihood of unintended pregnancy or sexually transmitted infections, including HIV, as well as mental health disorders, such as anxiety, depression and suicide.

Chapter IV

Family planning

25. Data on family planning among adolescents and youth is mostly limited to developing countries. The 64 recent surveys with relevant data are representative of 26 per cent of all women aged 15-24 globally, but they represent 43 per cent of young women in Africa, 27 per cent in Asia and 29 per cent in Latin America and the Caribbean. The present section is based mainly on the results of those surveys and, consequently, focuses mostly on developing countries.

26. About half of married young women wish to have children soon. Thus, among the currently married women aged 15-19 included in the 64 surveys, 56 per cent wish to have a child soon or are intentionally pregnant, 20 per cent are using contraception and 24 per cent do not wish to get pregnant but are not using any method of contraception, implying that their need for contraception is unmet. Among married women aged 20-24, 42 per cent are or wish to get pregnant, 37 per cent use contraception and 21 per cent have an unmet need for contraception.

27. In both Africa and Asia, the number of young women who are pregnant or wish to become pregnant is higher than the number using contraception. Thus, in 26 African countries and 11 Asian countries, out of the 64 countries reporting data, that pattern holds among married women aged 15-19, as it does in 20 countries in Africa and 3 in Asia among married women aged 20-24. In contrast, in all Latin American countries reporting data, more young married women are using contraception than are pregnant or wishing to become pregnant.

28. Contraceptive use among young married women is highest in Latin America and the Caribbean, where half of married women aged 15-19 use contraception (37 per cent use to space and 13 per cent use to limit) and 62 per cent of married women aged 20-24 use contraception (36 per cent use to space and 26 per cent use to limit) (see figure X). In both Africa and Asia, contraceptive use among married women aged 15-19 is considerably lower, at 12 per cent and 20 per cent, respectively. In both regions contraceptive prevalence nearly doubles by age 20-24, to reach 24 per cent in Africa and 38 per cent in Asia.

6 The estimates presented in sect. V were derived from the most recent demographic and health surveys conducted by Measure DHS, which refer mostly to data from 2005 or later. Available from www.measuredhs.com/data/STATcompiler.cfm.

Legend:
- **Black**: Using to space
- **Gray**: Need to space
- **Light Gray**: Using to limit
- **White**: Need to limit
29. In contrast to contraceptive prevalence, unmet need for contraception is similar in all regions and slightly higher among married women aged 15-19. For the latter, unmet need ranges from 22 per cent in Latin America and the Caribbean to 25 per cent in Asia. For women aged 20-24, unmet need is lowest in Latin America and the Caribbean at 17 per cent and highest in Africa at 25 per cent. Unmet need among young married women is especially high in Africa, where it is double the level of contraceptive use for those aged 15-19 and slightly higher than contraceptive use among those aged 20-24. In Asia, unmet need surpasses contraceptive use among married women aged 15-19.

30. Young married women aged 15-19 use contraception primarily to space births. Thus, 83 per cent of contraceptive users in that group wish to lengthen the intervals between births. As women reach the number of children they desire, more of them use contraception to limit family size; consequently, the proportion using contraception for limitation purposes increases with age while the proportion using it for spacing purposes diminishes. Among women aged 20-24, 42 per cent of contraceptive users wish to limit family size. The desire to limit family size is lowest in Africa, where just 17 per cent of contraceptive users aged 20-24 reported that objective. Use of contraception for limitation purposes is high in Asia, reaching 48 per cent among those aged 20-24, and in Latin America and the Caribbean, where 42 per cent of contraceptive users aged 20-24 wish to stop childbearing altogether and, remarkably, 25 per cent of those aged 15-19 wish the same.

31. Most young women having an unmet need for contraception also wish to space births rather than limit family size. Thus, 92 per cent of married women aged 15-19 in Africa and Asia with an unmet need for contraception want to delay the next pregnancy. The equivalent figure in Latin America and the Caribbean is 80 per cent.

32. Not only is there a significant unmet need for contraception among young women who are not using any method but, in addition, large proportions of contraceptive users still rely on traditional methods of contraception which are less effective than modern methods (see figure XI). In the 83 countries reporting data on the type of method used, 25 per cent of contraceptive users aged 15-19 rely on a traditional method, as do 19 per cent of those aged 20-24. In addition, in all developing regions, younger women are more likely to use traditional methods than those aged 20-24.

33. Demand for contraceptives is also significant among unmarried, sexually active young women, who have a greater interest in preventing pregnancy and are therefore more likely than married women to use contraception. Among the 62 countries reporting relevant data, in all but five countries contraceptive prevalence among sexually active unmarried women
aged 15-19 surpassed that of their married peers, and it did so among women aged 20-24 in all but 10. In 30 countries, however, including 22 in Africa, fewer than half of sexually active women aged 15-19 were using contraception, and in 17 countries, including 12 in Africa, the same held true for sexually active women aged 20-24. Overall, in the 62 countries considered, about 10 per cent of unmarried women aged 15-19 were sexually active and using contraception, and 27 per cent aged 20-24 were doing so. Although use of modern contraception was common, 23 per cent of the unmarried contraceptive users aged 15-19 and 16 per cent of those aged 20-24 relied on traditional methods and, in Africa, those figures rose to 29 per cent and 20 per cent, respectively.

Figure XI
Percentage of contraceptive users relying on traditional methods

34. In sum, many women aged 15-24 are already using contraception to delay or space pregnancies. At the same time, large numbers of young women still have an unmet need for contraception to space births and significant numbers rely on traditional methods, especially those living in Africa and those aged 15-19. Furthermore, a high proportion of unmarried young women are sexually active but not using contraception. The result is that more than 6 million unintended pregnancies occur annually in developing
countries and often end in unsafe abortion. Improving access to family planning for all adolescent and young women who need it is an effective strategy to reduce the number of unintended pregnancies and unsafe abortions. Governments have the responsibility to enable young people to have the means to build their families responsibly.

---

Chapter V

Health of adolescents and youth

35. Adolescence is generally the healthiest period in life, when human beings reach their peak in strength, speed, fitness and many cognitive abilities. Puberty is also a period, however, when major physiological changes occur and health risks with potentially life-threatening consequences become prominent. Adolescent behaviours with long-term implications for health include smoking, drinking and the use of illicit drugs. Eating and exercise habits also become set during this period of life. Reproductive maturity and the initiation of sexual activity expose young people to the risk of contracting sexually transmitted infections, including HIV. For adolescent women, early pregnancy and childbearing are associated with higher risks of morbidity and mortality, particularly in developing countries. For male adolescents and young men, the risks of injury increase, especially because they are more likely than young women to be involved in traffic accidents, violence or war. Puberty is also the time of onset of certain mental disorders that increase the risk of suicide. The result is a morbidity profile that changes markedly from early adolescence to young adulthood.

36. In most populations, mortality is lowest between ages 10 and 14. Globally, the death rate of males aged 10-14 is 86 per 100,000, and that of females 83 per 100,000 (see figure XII). After those ages, mortality increases markedly, but the increase is steeper for males than for females. Thus, the death rate among males aged 20-24 is 2.5 times higher than that of males aged 10-14, while for females the death rate of those aged 20-24 is 1.9 times higher than those aged 10-14.

37. Death rates among adolescents and youth are generally higher among males than among females, often by large margins. The exceptions are death rates among females aged 15-24 in Africa and 10-14 in South Asia. In Africa, high levels of maternal mortality and the prevalence of HIV/AIDS are largely responsible for maintaining the higher mortality of young women. In South Asia, the low status of women is the root cause of the relatively high mortality of adolescent and young women, leading to early marriage, early childbearing and insufficient access to health services. In the rest of Asia and the Pacific, in Latin America and the Caribbean and in developed

---

countries, mortality among females aged 15-24 is markedly lower than that of males. The high mortality of young males and its rapid rise with age owes much to the increasing death toll caused by injuries, including road traffic accidents, homicides and suicides.

38. The World Health Organization (WHO) classifies the causes of death into three groups. Group I includes infectious and parasitic diseases, respiratory infections and maternal and perinatal conditions. Group II encompasses non-communicable diseases, including neoplasms, or cancer; cardiovascular, respiratory and digestive diseases; diabetes, nutritional and endocrine disorders, and neuropsychiatric disorders. Group III includes all injuries, whether intentional or unintentional. The decline in mortality achieved since 1950 owes much to the success achieved in controlling the spread of communicable diseases and in treating them. Consequently, in most countries today, communicable diseases cause a low proportion of all deaths. Major exceptions are countries in sub-Saharan Africa and South Asia, where communicable diseases are still major causes of death. Because people aged 10-24 are less likely than older persons to die from non-communicable diseases, communicable diseases account for a high share of their deaths in both Africa and South Asia (see figure XIII). In Africa, communicable diseases, which include maternal causes and HIV/AIDS, are still the major killer of women aged 10-24, causing 70 per cent of their deaths and 44 per cent of the deaths of their male peers. In South Asia, communicable diseases cause 40 per cent of female deaths and 29 per cent of male deaths of those aged 10-24. Globally, 47 per cent of female deaths and 26 per cent of male deaths of those aged 10-24 are due to communicable diseases, including maternal causes.

39. Ninety per cent of maternal deaths of women aged 15-24 occur in Africa and South Asia. Early childbearing, high fertility and the lack of access to adequate maternal health services, including trained birth attendants, contribute to the high number of maternal deaths in those regions. In addition, maternal mortality and morbidity in adolescents is a major public health challenge in the majority of developing countries. Women aged 15-19 are twice as likely to die during pregnancy or childbirth than their peers aged 20-24. Recourse to abortion under unsafe conditions that endanger the lives of women is another major health concern. An estimated

---

9 The term “communicable diseases” is used here to refer to group I causes, while recognizing that many maternal and perinatal deaths are not due to infectious causes. The term “non-communicable diseases” refers here to all group II causes, even though some cancers, for example, have been shown to have infectious origins.
3 million unsafe abortions among women aged 15-19 occurred in 2008. Preventing them requires reducing the incidence of unintended pregnancies among adolescent women, especially by facilitating their access to modern contraception.

Group I

Group II

Group III
40. A major cause of death in Africa is HIV/AIDS. In 2008, Africa accounted for 83 per cent of deaths of those aged 10-24 caused by HIV/AIDS. The Joint United Nations Programme on HIV/AIDS (UNAIDS) estimates that 3.4 per cent of women aged 15-24 in Africa and 1.4 per cent of their male counterparts are living with HIV, but prevalence varies markedly among countries. In the highly affected countries of Botswana, Lesotho, South Africa and Swaziland, between 12 and 16 per cent of women aged 15-24 are living with HIV. Because the epidemic began in the 1980s or 1990s in most countries, children who acquired HIV from their mothers are among the adolescents and youth living with HIV today. With increasing usage of antiretroviral therapy, the number of perinatally infected children who survive to adolescence and young adulthood will grow. In general, however, most people acquire the disease through unprotected sexual intercourse.

41. Injuries are a major killer of young people and are a special threat for young men. Globally, injuries cause 51 per cent of male deaths and 28 per cent of female deaths of those aged 10-24. Injuries cause most deaths among males aged 10-24 in developed countries (73 per cent), Latin America and the Caribbean (72 per cent), and Asia (not including South Asia) and the Pacific (62 per cent), and they are also the major killer of females aged 10-24 in developed countries, causing 55 per cent of their deaths. In South Asia, injuries cause a higher percentage of deaths among young males than communicable diseases (45 per cent versus 29 per cent) and they are the second most important cause of death for females, accounting for 33 per cent of deaths of females aged 10-24. Even in Africa, 36 per cent of deaths of males aged 10-24 are caused by injuries.

42. Injuries are classified as intentional and unintentional. Intentional injuries include suicide and homicide, whether by violence or by war. Unintentional injuries comprise all accidents, including road traffic accidents, poisonings, drownings, fires and falls. Globally, the share of unintentional injuries among all injury deaths among those aged 10-24 is the same for males and females, at 63 per cent. Unintentional injuries account for the major share of deaths from injury among both young males and young females in all regions except Latin America and the Caribbean, where intentional injuries, mostly from violence, are the major killer of young men, accounting for 60 per cent of deaths from injury of males aged 10-24, with violence alone being responsible for 50 per cent. Violence kills five times more males than females among those aged 10-24, and 69 per cent of deaths from violence occur in Africa and Latin America and the Caribbean.

43. Road traffic accidents kill four times more males than females among those aged 10-24 and, globally, they account for 30 per cent of male deaths from injuries at those ages. The toll of road traffic accidents is particularly important among both young men and women in developed countries and among young men in Asia not including South Asia and the Pacific. Suicide, another important cause of death from injury among young people, is especially high in Asia, where 75 per cent of all suicides in the world occur. In South Asia, 40 per cent of all deaths from injuries among females aged 10-24 are suicides.

44. Given that the major causes of death among adolescents and youth vary considerably among regions and countries, a wide array of interventions must be considered to reduce mortality and morbidity at young ages. They are outlined in the recommendations included in section VIII below.
Chapter VI
International migration of youth

45. In 2010, the world had 214 million international migrants, of which 35 million were aged 10-24. As in the overall population, the proportion of people aged 10-24 in the migrant population has been decreasing. Furthermore, the migrant population’s share of adolescents and youth is smaller than that of the overall population — 17 per cent versus 26 per cent — indicating that the migrant population is older.

46. Half of the international migrants aged 10-24 live in developed countries, compared to 60 per cent of the total migrant population. By contrast, all developing regions have higher shares of the migrants aged 10-24 than their respective shares of the overall migrant population. The higher concentration of migrant adolescents and youth in developing regions also gives rise to younger migrant populations in those regions. That is, the share of migrants aged 10-24 among all migrants is higher in all developing regions, where it ranges from 19 per cent in Asia and the Pacific to 26 per cent in Africa, than in developed countries, where it is a low 14 per cent.

47. The proportion of females in the overall migrant population, at 49 per cent, is higher than the proportion of females among migrants aged 10-24, at 48.4 per cent. However, in the developing regions, young girls and women constitute a higher percentage of migrants aged 10-24 than they do among all international migrants. Thus, 52.5 per cent of migrants aged 10-24 in Africa are female, whereas females constitute 46.8 per cent of all international migrants in that region. In developed countries, the reverse holds true: the female share of the overall migrant population, at 51.5 per cent, is higher than that of migrants aged 10-24, which is 48.9 per cent.

48. Estimates of the net number of people aged 10-24 who moved from their countries of birth to other countries during the period from 2000 to 2010, and whose ages in 2010 ranged from 20 to just under 25 years, amounted to 6.9 million — 62 per cent of whom moved to developed countries. Compared to the period from 1990 to 2000, the size of that flow increased by 28 per cent during the period from 2000 to 2010. In addition, persons aged 15-24 who migrated also contributed to the net increase of migrants aged 25-29 in 2010, which amounted to 9.1 million.

49. Young people migrate for different reasons. Adolescents under 18 may migrate while accompanying their parents or to reunite with them. Young people may also migrate to study abroad. According to the United Nations Educational, Scientific and Cultural Organization, 2.8 million foreign stu-
dents were pursuing tertiary education abroad in 2008, 49 per cent of whom were in Europe, 22 per cent in North America, 15 per cent in Asia and 9 per cent in Oceania. Most of those students originated in developing countries, including 53 per cent in Asia, 12 per cent in Africa and 6 per cent in Latin America and the Caribbean. The 31 per cent originating in developed countries included 25 per cent from European countries and 3 per cent from Canada and the United States of America.

50. Although the level of youth participation in labour migration cannot be quantified owing to the lack of data by age, indirect evidence suggests that young people may account for a significant proportion of migrant worker admissions. Even when young people migrate for reasons other than employment, they often work abroad. However, like their native peers, young migrants are likely to experience high unemployment, and they often have higher unemployment rates than natives, partly because they lack fluency in the local language. Studies in selected countries suggest that when persons migrate as children, they are more likely to adapt to the host society and become fluent in the local language — a major advantage in later life. When migrants move as teenagers, language acquisition is more difficult and access to educational opportunities at their destination becomes more crucial to ensuring a successful adaptation.
Chapter VII
Conclusions and recommendations

51. In countries where high proportions of girls marry before age 18, Governments need to develop and implement culturally sensitive programmes to promote marriage at later ages, including programmes that focus on reducing the practice of dowry and bride wealth payments. Governments should also examine their laws on marriage to ensure that they grant men and women “the same right freely to choose a spouse and to enter marriage only with their free and full consent”, as established by the Convention on the Elimination of All Forms of Discrimination against Women. Ensuring that the courts follow through with the enforcement of existing laws is also important. Ultimately, improving living conditions for the poor and supporting adolescents, particularly girls, in continuing their education are crucial to reducing incentives to marry at very young ages.

52. Because sexual activity among young people is a reality, there is an urgent need to empower them to make responsible decisions regarding their sexual lives by improving their negotiating skills, addressing gender double standards, developing supportive family and institutional environments and taking measures to prevent intimate partner violence and all forms of sexual violence. Programmes on sexuality education and HIV prevention deserve support because they give adolescents an understanding of what responsible sexual and reproductive behaviour entails and the skills to help them achieve it.

53. Special efforts are needed to provide family planning services to young women and men, whether they are married or unmarried. In developing strategies to reach young people, account must be taken of their diversity of circumstances, since some may attend school while others do not, some might work while others might not and some may be parents already. Community-based reproductive health programmes with multiple components permit using several strategies to reach young people and to sensitize community leaders and parents. To be effective, those programmes must be culturally appropriate, sensitive to the expressed needs of adolescents and youth and built on the strength of local institutions.

54. Sexual and reproductive services should be an integral part of the minimum health-care package offered to adolescents and young people at all levels of the health-care system, but particularly under primary care. In order to reach low-income youth, legal, financial and cultural obstacles that prevent or limit their access to sexual and reproductive health-care services
should be removed. Young pregnant women should receive a package of care that includes at least four antenatal visits to maternal care facilities, the attendance of skilled personnel at delivery, the use of proper equipment and medications, the capacity to refer and transport them to emergency obstetric services if complications arise and post-natal follow-up and counselling.

55. A combination of strategies is necessary for HIV/AIDS prevention and treatment among young people. They include increasing knowledge of the mechanisms of transmission and of all ways of preventing infection, especially for young people at higher risk of infection; developing accessible youth-friendly services, in particular by training health personnel to be non-judgemental in caring for young people, including young people living with HIV; promoting voluntary counselling and testing and offering antiretroviral therapy for those who need it; providing diagnosis and treatment of other sexually transmitted infections; and implementing public education campaigns to reduce stigma and foster a safe and supportive environment.

56. In low-income countries, it is still crucial to combat infectious diseases, particularly tuberculosis and lower respiratory tract infections that account for numerous deaths among young people but fail to attract sufficient policy attention.

57. Improving health and health prospects demands action outside the health system. Preventing tobacco use among young people, for instance, can be achieved not only through education campaigns about the risks associated with smoking but, especially, by increasing the price of cigarettes through taxation. Prevention of alcohol abuse can be achieved by raising the prices of alcoholic beverages, banning or reducing advertising directed at young people and adopting and enforcing laws banning the public consumption of alcohol by minors.

58. To reduce road traffic accidents, preventive measures include investment in road infrastructure, the compulsory use of seat belts in cars and helmets when using motorcycles and the enforcement of legislation prohibiting driving after drinking alcohol or under the influence of drugs.

59. Because firearms are responsible for the vast majority of deaths caused by violence, strengthening gun control laws can contribute to reducing mortality among the young.

60. To the extent that unemployment is at the root of social problems affecting youth, and considering that unemployment and poverty rates, even for those who are employed, are especially high among youth, Governments should pay particular attention to policies and programmes that foster decent work opportunities for young people.
61. Facilitating migration for education can bring benefits beyond the improvement of educational attainment. Young migrant students can become bridges between societies and cultures. Their migration facilitates the transfer of know-how and expertise. The skills they acquire as they adapt to the host society can empower them to function more effectively in a globalized world. To derive the greatest benefits from such migration, countries of origin can promote their return by actively maintaining links with students abroad and facilitating the search for jobs at home upon the completion of training.
ANNEX

Resolution 2012/1

Adolescents and youth*

The Commission on Population and Development,

Recalling the Programme of Action of the International Conference on Population and Development and the key actions for its further implementation,

Recalling also the Universal Declaration of Human Rights and the obligations of States parties to the International Covenant on Civil and Political Rights, the International Covenant on Economic, Social and Cultural Rights, the Convention on the Elimination of All Forms of Discrimination against Women, the Convention on the Rights of the Child, the Convention on the Rights of Persons with Disabilities, the International Convention on the Elimination of All Forms of Racial Discrimination and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families,

Recalling further the outcomes of relevant United Nations high-level meetings, conferences and summits, including the United Nations Millennium Declaration, the 2005 World Summit Outcome, the Beijing Platform for Action and Five-year Review of the implementation of the

12 Report of the Fourth World Conference on Women, Beijing, 4-15 September 1995 (United Nations publication, Sales No. E.96.IV.13), chap. I, resolution 1, annex II.
Beijing Declaration, the World Programme of Action for Youth,13 and the outcome document of the High-level Meeting of the General Assembly on Youth: Dialogue and Mutual Understanding,14 the Political Declaration on HIV and AIDS: Intensifying Our Efforts to Eliminate HIV and AIDS,15 and the Political Declaration of the High-level Meeting of the General Assembly on the Prevention and Control of Non-communicable Diseases,16 as well as the outcome document of the High-level Plenary Meeting of the General Assembly on the Millennium Development Goals entitled “Keeping the promise: united to achieve the Millennium Development Goals”,17 and the internationally agreed development goals, including the Millennium Development Goals,

Reaffirming that development is a central goal in itself and that sustainable development in its economic, social and environmental aspects constitutes a key element of the overarching framework of United Nations activities,

Acknowledging the largest generation of adolescents and youth ever in history and cognizant that different demographic trends and age structures directly impact their lives and have various impacts on development, depending on circumstances in each country, and on the size of investments required to ensure the health and development of current and future generations, and recognizing the evolving capacities, needs, contributions and challenges of adolescents and youth, and that classifications and definitions of age groups vary in accordance with each country’s national legislation,

Recognizing that the ways in which young people are able to address their aspirations and challenges and fulfil their potential will influence current social and economic conditions and the well-being and livelihood of future generations, and stressing the need for further efforts to promote the interests of youth, including the full enjoyment of their human rights, inter alia, by supporting young people in developing their potential and talents and tackling obstacles facing youth,

Recognizing also that the full implementation of the Programme of Action of the International Conference on Population and Development and the key actions for its further implementation, including those related to sexual and reproductive health and reproductive rights, which would also contribute to the implementation of the Beijing Platform for Action, as well
as those on population and development, education and gender equality, is integrally linked to global efforts to eradicate poverty and achieve sustainable development, and that population dynamics are all-important for development,

*Recognizing further* that adolescents and youth in all countries are a major resource for development and key agents for social change, economic development and technological innovation, and that further progress for development requires the full and effective participation of young people and youth-led organizations at the international, regional, national and local levels,

*Recognizing* that the international community has been challenged by multiple and interrelated crises, including the ongoing impact of the financial and economic crisis, volatile energy and food prices, and ongoing concerns over food security, as well as the increasing challenges posed by climate change and the loss of biodiversity, all of which have increased vulnerabilities and inequalities and have adversely affected development gains, in particular in developing countries, and calling for enhanced cooperation and concerted action to address those challenges, taking into account the positive role that education can play in that respect,

*Reaffirming* its commitment to realizing the right of everyone to education, and emphasizing that education shall be directed to the full development of the human person and his or her dignity and shall strengthen respect for all human rights and fundamental freedoms, and recalling that commitments made at the international level emphasize inclusive quality learning, including early childhood education, and universal access to complete, free and compulsory primary education as well as access to secondary, tertiary and vocational education and training and lifelong learning, as well as equal access to education and successful schooling for girls and women,

*Addressing* the high rates of youth unemployment, underemployment, vulnerable employment and informal employment by developing and implementing targeted and integrated national youth employment policies for inclusive job creation, improved employability, skill development and vocational training to meet specific labour market needs of youth, including youth migrants, and increased entrepreneurship, including the development of networks of young entrepreneurs at the international, regional, national and local levels, which foster knowledge among young people about their rights and responsibilities in society,

*Noting* with concern that for millions of people throughout the world, the right of everyone to the enjoyment of the highest attainable standard of physical and mental health, including access to medicines, still remains a distant goal and that in many cases, especially for children, youth
and people living in poverty, the likelihood of achieving this goal is becoming increasingly remote,

Reaffirming the need to promote gender equality and the empowerment of girls and young women in all aspects of youth development, recognizing the vulnerability of adolescent girls and young women and the need to eliminate discrimination against them, and the critical role of boys and young men in ensuring gender equality,

Concerned that early and forced marriage and forced sexual relationships have adverse physical, social and psychological effects on adolescent and young girls and violate their human rights, and that early childbearing and early and forced marriage reduce opportunities for adolescent and young girls to complete their education, develop employable skills and participate in community development,

Recognizing that reproductive rights embrace certain human rights that are already recognized in national laws, international human rights documents and other consensus documents and rest on the recognition of the basic right of all couples and individuals to decide freely and responsibly the number, spacing and timing of their children and to have the information and means to do so, the right to attain the highest standard of sexual and reproductive health, the right to make decisions concerning reproduction free of discrimination, coercion and violence, as expressed in human rights documents, and the right to have control over and decide freely and responsibly on matters related to their sexuality, including sexual and reproductive health, free of coercion, discrimination and violence,

Recognizing also that young people between 15 and 24 years of age account for more than 40 per cent of all new HIV infections among those aged 15 years or over because of the social and economic factors and other inequities that increase their vulnerability, including stigma and discrimination, gender-based and sexual violence, gender inequality and violations and lack of accurate information on HIV and other sexually transmitted infections and ready access to sexual and reproductive health, including HIV services,

Deeply concerned that young women living with HIV would like to space or limit pregnancy but are not using an effective modern method of contraception owing to limited access to voluntary family planning services and that addressing reproductive health and HIV together would better serve the needs of clients and health-care providers in a more comprehensive, cost-effective and efficient manner,

Recognizing that all forms of violence against adolescents and youth violate their rights, and in this regard recognizing the need to take appropri-
ate actions to address the factors that increase the particular vulnerability of adolescents and youth to all forms of violence,

*Recognizing also* the importance of preventing and addressing youth crime, including drug-related crime, and its impact on youth and the socioeconomic development of societies, and of protecting young victims, witnesses and their respective families, as well as supporting the rehabilitation, reintegration and inclusion of young offenders in society with a view to their assuming constructive roles,

*Emphasizing* that the full implementation of the United Nations Global Plan of Action to Combat Trafficking in Persons18 will contribute to address all factors and root factors that foster demand and make adolescents and youth, especially young women and girls, vulnerable to trafficking, as well as the protection and rehabilitation of victims and will, inter alia, promote, as appropriate, increased ratification and full implementation of the United Nations Convention against Transnational Organized Crime19 and its Protocol to Prevent, Suppress, and Punish Trafficking in Persons, Especially Women and Children,

*Recognizing* the contributions of adolescents and young migrants to countries of origin and destination, their particular vulnerabilities, circumstances and needs, and their potential to build social, economic and cultural bridges of cooperation and understanding across societies, and in that regard encouraging States to consider the socioeconomic circumstances and specific needs of young migrants,

*Recognizing also* that malaria-related ill health and deaths throughout the world, particularly among children, adolescents and youth, can be substantially reduced with political commitment and commensurate resources if the public is educated and sensitized about malaria and appropriate health services are made available, particularly in countries where the disease is endemic,

*Recalling* that the Programme of Action requires for its full implementation adequate and sustained mobilization and availability of resources at the international and national levels, as well as new and additional resources for developing countries from all available funding mechanisms, including multilateral, bilateral and private sources, and that Governments are not expected to meet the goals and objectives of the Programme of Action single-handedly, and expressing concern that funding levels do not meet current needs,

---

18 General Assembly resolution 64/293.
Taking note of the reports of the Secretary-General on adolescents and youth\textsuperscript{20} and on monitoring of population programmes, focusing on adolescents and youth,\textsuperscript{21} and taking note also of the report of the Secretary-General on the flow of financial resources for assisting in the implementation of the Programme of Action of the International Conference on Population and Development\textsuperscript{22}

1. Reaffirms the Programme of Action of the International Conference on Population and Development\textsuperscript{3} and the key actions for its further implementation;\textsuperscript{4}

2. Also reaffirms its strong commitment to the full implementation of the Programme of Action and the key actions for its further implementation agreed at the five-year review of the Programme of Action, and the Copenhagen Declaration on Social Development and its Programme of Action;\textsuperscript{23}

3. Further reaffirms the sovereign right of each country to implement recommendations of the Programme of Action or other proposals in the present resolution, consistent with national laws and development priorities, with full respect for the various religious and ethical values and cultural backgrounds of its people, and in conformity with universally recognized international human rights;

4. Calls upon Governments, in formulating and implementing national development plans, budgets and poverty eradication strategies, to prioritize actions to address challenges relating to the impact of population dynamics on poverty and sustainable development, keeping in mind that universal reproductive health-care services, commodities and supplies, as well as information, education, skill development, national capacity-building for population and development, and transfer of appropriate technology and know-how to developing countries are essential for achieving the Programme of Action, the Beijing Platform for Action\textsuperscript{14} and the Millennium Development Goals;

5. Also calls upon Governments, considering the development situation in each country, to promote both intergenerational equity and solidarity by taking into account the implications of the changing age structures of the population in medium- and long-term development planning and by considering the age-related consequences of social and economic policies, and

  \item \textsuperscript{23} Report of the World Summit for Social Development, Copenhagen, 6-12 March 1995 (United Nations publication, Sales No. E.96.IV.8), chap. I, resolution 1, annexes I and II.
\end{itemize}
further calls upon Governments and development partners to make youth development a priority across all sectors;

6. **Urges** Member States to promote equal opportunities for all, to combat all forms of discrimination against young people, including that based on race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, or other status, and to foster social integration for marginalized groups, such as young persons with disabilities, young migrants and indigenous youth, on an equal basis with others;

7. **Urges** Governments to protect and promote human rights and fundamental freedoms regardless of age and marital status, including, inter alia, by eliminating all forms of discrimination against girls and women, by working more effectively to achieve equality between women and men in all areas of family responsibility, in sexual and reproductive life, and in education at all levels, and by protecting the human rights of adolescents and youth to have control over and decide freely and responsibly on matters related to their sexuality, including sexual and reproductive health;

8. **Urges** Member States to enact and strictly enforce laws to ensure that marriage is entered into only with the free and full consent of the intending spouses and to enact and strictly enforce laws concerning the minimum legal age of consent and the minimum age for marriage, and to raise the minimum age for marriage, where necessary;

9. **Urges** all States to develop, adopt and fully implement laws and to take other measures, such as policies and educational programmes, as appropriate, to eradicate harmful practices, including female genital mutilation and early and forced marriage, which are violations of the human rights of women and girls, and to intensify efforts, in cooperation with local women’s and youth groups, to raise collective and individual awareness on how such harmful practices violate the human rights of women and girls;

10. **Calls upon** the international community to support ways to expand access to and the affordability of key products, such as vector control measures, including indoor residual spraying, long-lasting insecticide-treated nets, environmental management and vaccines, as well as by monitoring surveillance through rapid diagnostic tests, and artemisinin-based combination therapy for populations at risk of exposure to resistant strains of falciparum malaria in malaria-endemic countries, particularly in Africa, including through additional funds and innovative mechanisms, inter alia, for the financing and scaling-up of artemisinin production and procurement, as appropriate, to meet the increased need;
11. *Welcomes* the increased funding for malaria interventions and for research and development of preventive and control tools that will target children, adolescents and youth;

12. *Urges* all States to enact and enforce legislation to protect all adolescents and youth, including those in situations of armed conflict, natural disasters or humanitarian emergencies, from all forms of violence, including gender-based violence and sexual violence, trafficking in persons and involvement in criminal activities, and to provide social and health services, including sexual and reproductive health services, and complaint and reporting mechanisms for the redress of violations of their human rights;

13. *Urges* Member States to take effective measures in conformity with international law to protect adolescents and youth affected or exploited by terrorism and incitement;

14. *Also urges* Member States to take concerted actions in conformity with international law to remove the obstacles to the full realization of the rights of adolescents and youth living under foreign occupation to promote the achievement of the Millennium Development Goals;

15. *Calls upon* Member States to promote and protect effectively the human rights and fundamental freedoms of all migrants, especially young people, regardless of their migration status, and to address international migration through international, regional or bilateral cooperation and dialogue, and through a comprehensive and balanced approach, recognizing the roles and responsibilities of countries of origin, transit and destination in promoting and protecting the human rights of all migrants, especially young people, and to address the root causes of youth migration, while avoiding approaches that might aggravate their vulnerability;

16. *Calls upon* Governments to take all necessary measures to eliminate all forms of discrimination against girls and young women, to remove all obstacles to gender equality, to promote the empowerment of girls and young women in all aspects of youth development, and to encourage boys and young men to participate fully in all actions towards gender equality;

17. *Also calls upon* Governments to support and encourage men in their important role as fathers and in helping their children transition successfully to adulthood, including by providing adequate financial support for their children and families, to promote positive male role models and programmes for boys to become gender-sensitive adults and to enable men to support, promote and respect women’s sexual and reproductive health and reproductive rights, recognizing the inherent dignity of all human beings;

18. *Urges* Member States to improve and actively support opportunities for young people to gain access to productive employment and decent work,
including through investment in youth employment programmes, youth-adult partnerships entrepreneurship and other income generation strategies, active labour markets, public-private partnerships and other measures to facilitate the participation of young people in labour markets, in accordance with States’ respective national laws and international obligations and commitments, and to reinforce links between national development strategies and policies on education, training, social integration and mobility, taking into account gender equality and the empowerment of women;

19. Also urges Member States to address the high rates of youth unemployment, underemployment, vulnerable employment and informal employment by developing and implementing targeted and integrated national youth employment policies for inclusive job creation, improved employability, skill development and vocational training to meet specific labour market needs of youth, including young migrants, and increased entrepreneurship, including the development of networks of young entrepreneurs at the international, regional, national and local levels, which foster knowledge among young people about their rights and responsibilities in society, and in this regard request donors, specialized United National entities and the private sector to continue to provide assistance, including technical and funding support, as required;

20. Encourages Member States to meet the needs and aspirations of youth, particularly in the areas of education, work, income creation and citizen participation, through, inter alia, training programmes that result from dialogue between Governments, employers and employees of various sectors of the economy, as appropriate;

21. Calls upon Member States to ensure the right to education of good quality for women and girls, on an equal basis with men and boys, and that they complete a full course of primary education, and to renew their efforts to improve and expand the education of girls and women at all levels, including at the secondary and higher levels, as well as vocational education and technical training, in order to, inter alia, achieve gender equality, the empowerment of women and poverty eradication;

22. Urges Member States to increase efforts to improve the quality of education and to promote universal access to education, without discrimination on any basis, to ensure that adolescents and youth can acquire the knowledge, capacities, skills and ethical values needed, including through appropriate access to scholarships and other mobility programmes;

23. Urges Governments and the international community to ensure that young people, on an equitable and universal basis, enjoy the highest attainable standard of physical and mental health by providing them with access to sustainable health and social services without discrimination, by paying
special attention to nutrition, including eating disorders and obesity, prevention of non-communicable and communicable diseases, promotion of sexual and reproductive health, and mental health, and by supporting measures to prevent sexually transmitted diseases, including HIV and AIDS, to reduce road traffic fatalities and injuries, to prevent tobacco and illicit drug use and the harmful use of alcohol, and to encourage sports and recreation as well as the removal of all types of barriers to the ability of adolescents and youth to protect their health;

24. Also urges Governments to strengthen basic infrastructure, human and technical resources, and the provision of health facilities so as to improve health systems, particularly for adolescents and youth, and to ensure the accessibility, affordability and quality, especially in rural and remote areas, of health-care services, as well as sustainable access to safe drinking water and basic sanitation, bearing in mind the commitment to halving, by 2015, the proportion of the population without sustainable access to safe drinking water and basic sanitation as a means of fighting waterborne diseases;

25. Recognizes the rights, duties and responsibilities of parents and other persons legally responsible for adolescents to provide, in a manner consistent with the evolving capacities of the adolescent, appropriate direction and guidance on sexual and reproductive matters, and that countries must ensure that the programmes and attitudes of health-care providers do not restrict the access by adolescents to appropriate services and the information they need, including on sexually transmitted infections and sexual abuse, and recognizes that in doing so, and in order to, inter alia, address sexual abuse, these services must safeguard the right of adolescents to privacy, confidentiality, respect and informed consent, respecting cultural values and religious beliefs, and that in this context, countries should, where appropriate, remove legal, regulatory and social barriers to reproductive health information and care for adolescents;

26. Calls upon Governments, with the full involvement of young people and with the support of the international community, to give full attention to meeting the reproductive health-service, information and education needs of young people, with full respect for their privacy and confidentiality, free of discrimination, and to provide them with evidence-based comprehensive education on human sexuality, sexual and reproductive health, human rights and gender equality to enable them to deal in a positive and responsible way with their sexuality;

27. Urges Governments and development partners, including through international cooperation, in order to improve maternal health, reduce maternal and child morbidity and mortality, and prevent and respond to HIV and AIDS, to strengthen health systems and ensure that they prior-
itize universal access to sexual and reproductive information and health-care services, including family planning, prenatal care, safe delivery and postnatal care, especially breastfeeding and infant and women's health care, emergency obstetric care, prevention and appropriate treatment of infertility, quality services for the management of complications arising from abortion, reducing the recourse to abortion through expanded and improved family planning services and, in circumstances where abortion is not against the law, training and equipping health-service providers and other measures to ensure that such abortion is safe and accessible, recognizing that in no case should abortion be promoted as a method of family planning, prevention and treatment of sexually transmitted infections, including HIV, and other reproductive health conditions and information, education and counselling, as appropriate, on human sexuality, reproductive health and responsible parenthood, taking into account the particular needs of those in vulnerable situations, which would contribute to the implementation of the Programme of Action of the International Conference on Population and Development, the Beijing Platform for Action and the Millennium Development Goals;

28. **Reiterates** the need for Governments to ensure that all women and men have comprehensive information about, and access to, a choice of the widest possible range of safe, effective, affordable and acceptable modern methods of family planning, including long-acting methods and male and female condoms, so that they are able to exercise free and informed reproductive choices, and stresses that Governments and development partners, through international cooperation, should ensure that family planning programmes have a sufficient and continuous supply of safe, effective, affordable and acceptable modern contraceptives;

29. **Calls upon** Governments to pay particular attention to adolescents and youth, especially young women and adolescent girls, in significantly scaling up efforts to meet the goal of ensuring universal access to HIV prevention, treatment, care and support, free of stigma and discrimination and with a gender perspective, and to provide comprehensive information, voluntary counselling and testing to adolescents and youth living with HIV as they transition into adulthood;

30. **Also calls upon** Governments to strengthen national social and child protection systems, and care and support programmes for adolescents and youth, in particular for young women and adolescent girls affected by and vulnerable to HIV, as well as their families and caregivers, including through the provision of equal opportunities to support the development to full potential of orphans and other children affected by and living with HIV, especially through equal access to education, the creation of safe and non-discriminatory learning environments, supportive legal systems and
protections, including civil registration systems, and provision of comprehensive information and support, including youth-friendly health centres, to children and their families and caregivers, especially age-appropriate HIV information to assist children living with HIV as they transition through adolescence, consistent with their evolving capacities;

31. *Calls upon* Governments, United Nations agencies, and others, as appropriate, to actively support and invest in increased participation of young people and in youth-led and youth-focused organizations, taking into account gender equality and representation of youth of various backgrounds, in the formulation, decisions about, implementation, monitoring and evaluation of, as appropriate, international, regional, national and local development strategies and policies that affect young people;

32. *Encourages* Governments to improve information in order to enable young people to make better use of their opportunities to participate in decision-making, to develop and strengthen opportunities for young people to learn their rights and responsibilities, promoting their social and political participation and removing obstacles that affect their full contribution to society, and to promote and support youth associations, volunteer groups and entrepreneurship;

33. *Invites* a wide range of relevant stakeholders, including families, teachers, religious, traditional and community leaders, and community-based organizations, to play positive roles to promote adolescent and youth development, maximize the impact of information, education and communication activities and social media, and mobilize public opinion in support of actions to improve the well-being of young people and their ability to exercise their human rights;

34. *Encourages* the United Nations agencies, the international community and civil society, as well as the private sector, to promote and support the implementation of the adolescent and youth development agenda and to strengthen international cooperation and the exchange of information on effective policies, programmes and activities as a matter of priority;

35. *Underlines* the central role of the global partnership for development and the importance of goal 8 in achieving the Millennium Development Goals, and recognizes that without substantial international support, several of the goals are likely to be missed in many developing countries;

36. *Encourages* Governments and development partners to bring their investments in reproductive health in line with the revised cost estimates presented by the Secretary-General for each of the four programme components identified in chapter XIII of the Programme of Action of the Interna-
tional Conference on Population and Development,\textsuperscript{24} calls upon Governments of both developed and developing countries to make every effort to mobilize the required resources to ensure that the health, development and human rights-related objectives of the Programme of Action are met, and urges Governments and development partners to cooperate closely to ensure that resources are used in a manner that ensures maximum effectiveness and is in full alignment with the needs and priorities of developing countries;

37. \textit{Urges} Governments to monitor their progress towards the implementation of the Programme of Action, the key actions for its further implementation and other internationally agreed development goals at the national and local levels, and in this regard, to make special efforts to strengthen their vital registration and health information systems, and to develop the capacity of relevant national institutions and mechanisms to generate population data, disaggregated by sex, age and other categories, as needed, to monitor the well-being of adolescents and youth, and to use these data for the formulation and implementation of population and development policies;

38. \textit{Requests} the Secretary-General to continue, within the framework of the implementation of the Programme of Action, the substantive work on adolescents and youth, including integrating gender and age perspectives, and other relevant perspectives, into analyses and recommendations, in collaboration and coordination with relevant United Nations agencies, funds and programmes, and other relevant international organizations, and giving due consideration to their implications for development and poverty eradication, and sustained, equitable and inclusive economic growth.
