INTRODUCTION - 2002 COUNTRY PROFILES SERIES

Agenda 21, adopted at the United Nations Conference on Environment and Development (UNCED) in Rio de Janeiro in 1992, underscored the important role that States play in the implementation of the Agenda at the national level. It recommended that States consider preparing national reports and communicating the information therein to the Commission on Sustainable Development (CSD) including, activities they undertake to implement Agenda 21, the obstacles and challenges they confront, and other environment and development issues they find relevant.

As a result, in 1993 governments began preparing national reports for submission to the CSD. After two years of following this practice, the CSD decided that a summarized version of national reports submitted thus far would be useful. Subsequently, the CSD Secretariat published the first Country Profiles series in 1997 on the occasion of the five-year review of the Earth Summit (Rio + 5). The series summarized, on a country-by-country basis, all the national reports submitted between 1994 and 1996. Each Profile covered the status of all Agenda 21 chapters.

The purpose of Country Profiles is to:

- Help countries monitor their own progress;
- Share experiences and information with others; and,
- Serve as institutional memory to track and record national actions undertaken to implement Agenda 21.

A second series of Country Profiles is being published on the occasion of the World Summit on Sustainable Development being held in Johannesburg from August 26 to September 4, 2002. Each profile covers all 40 chapters of Agenda 21, as well as those issues that have been separately addressed by the CSD since 1997, including trade, energy, transport, sustainable tourism and industry.

The 2002 Country Profiles series provides the most comprehensive overview to date of the status of implementation of Agenda 21 at the national level. Each Country Profile is based on information updated from that contained in the national reports submitted annually by governments.

Preparing national reports is often a challenging exercise. It can also be a productive and rewarding one in terms of taking stock of what has been achieved and by increasing communication, coordination and cooperation among a range of national agencies, institutions and groups. Hopefully, the information contained in this series of Country Profiles will serve as a useful tool for learning from the experience and knowledge gained by each country in its pursuit of sustainable development.
NOTE TO READERS

The 2002 Country Profiles Series provides information on the implementation of Agenda 21 on a country-by-country and chapter-by-chapter basis (with the exception of chapters 1 and 23, which are preambles). Since Rio 1992, the Commission on Sustainable Development has specifically addressed other topics not included as separate chapters in Agenda 21. These issues of trade, industry, energy, transport and sustainable tourism are, therefore, treated as distinct sections in the Country Profiles. In instances where several Agenda 21 chapters are closely related, for example, chapters 20 to 22 which cover environmentally sound management of hazardous, solid and radioactive wastes, and chapters 24 to 32 which refer to strengthening of major groups, the information appears under a single heading in the Country Profile Series. Lastly, chapters 16 and 34, which deal with environmentally sound management of biotechnology, and transfer of environmentally sound technology, cooperation, capacity-building respectively, are presented together under one heading in those Country Profiles where information is relatively scarce.

At the release of this Country Profile, Swaziland had not updated it and therefore any new changes will appear on our web page: http://www.un.org/esa/agenda21/natinfo

CHAPTER 5: DEMOGRAPHIC DYNAMICS AND SUSTAINABILITY

Decision-Making: No information available.

Programmes and Projects: No information available.

Status: Swaziland is a small, landlocked country of 17,364 square kilometers bounded to the East by Mozambique and otherwise surrounded by South Africa. Geographically, Swaziland is unique. Despite its small area, the country is divided into four distinct physiographic regions from west to east. The Highveld, to the west, comprises mountains with numerous rivers, waterfalls and gorges. The climate is temperate with warm, wet summers and cool to cold dry winters. The Middleveld incorporates fertile soils and valleys with views of the Highveld and Lowveld. The warm climate is ideal for growing various crops and much of the agricultural activity is found in this region. The Lowveld is sub-tropical and is where two of the country's major crops, sugar and citrus, thrive. The Lubombo Escarpment is mountainous and is the dividing line between Swaziland and Mozambique. The climate is sub-tropical with mixed farming being the major activity. The population of Swaziland is approximately 800,000 people, with an agricultural based economy.

CHAPTER 8: INTEGRATING ENVIRONMENT AND DEVELOPMENT IN DECISION-MAKING

**Decision-Making:** The Department of the Environment is under the Ministry of Tourism, Environment and Communications. The Department of the Environment acts as the Secretariat of the body dealing with environmental issues known as the Swaziland Environment Authority (SEA). The SEA was established through an Act of Parliament in November 1992. Presently, implementation of environmental legislation is the responsibility of several ministries and government departments, including the SEA, the Ministries of Economic Planning and Development and Ministry of Justice and Constitutional Affairs, among others. Setting up the Authority is probably the most significant achievement of the Government of Swaziland, since it has laid down a firm foundation for coordination and overseeing the implementation of environmental programmes. As a new organization, the Authority has still to establish various mechanisms, legislation and partnership agreements with other bodies before it can fully address much of its mandate. However, major achievements to date include drafting and gazetting of environmental audit assessment and review regulations as contained in Legal Notice No. 58 of 1996, review of the first EIA statements prepared under the new Regulations, ratification and participation in a number of environmental conventions, preparation of an Environmental Issues Paper, coordination and Preparation of the National Environmental Action Plan (NEAP), and conducting Environmental Awareness campaigns throughout Swaziland. The Swaziland Environment Act, 1992, supersedes all other environmental legislation in the country. The main function of the Authority is to coordinate the government's effort to incorporate environmental factors into Swaziland's development process. In addition to this crucial role, the Authority has wide ranging responsibilities to coordinate all environmental issues in the country, monitor environmental quality, set environmental standards, develop environmental policies, and implement and enforce mechanisms to ensure that environmental consideration is taken into account in the authorization and management of development. Participation of the broader cross-section of the population in decision-making is encouraged. Public participation effectively allows people to have a say in future policies that will affect them and to attain a sense of ownership, which is an important ingredient for the success of environmental programmes. In general, the analysis and approval of programmes rest with the decision-making authority of the Government. However, if the authorizing agency encounters problems or is in doubt about its analysis, then the issue at hand is forwarded to SEA for further classification and analysis. It is at this stage that the public becomes most directly involved.

CHAPTER 10: INTEGRATED APPROACH TO THE PLANNING AND MANAGEMENT OF LAND RESOURCES

Decision-Making: No information available.

Programmes and Projects: No information available.

Status: Swaziland is a small, landlocked country of 17,364 square kilometers bounded to the East by Mozambique and otherwise surrounded by South Africa. Geographically, Swaziland is unique. Despite its small area, the country is divided into four distinct physiographic regions from west to east. The Highveld, to the west, comprises mountains with numerous rivers, waterfalls and gorges. The climate is temperate with warm, wet summers and cool to cold dry winters. The Middleveld incorporates fertile soils and valleys with views of the Highveld and Lowveld. The warm climate is ideal for growing various crops and much of the agricultural activity is found in this region. The Lowveld is sub-tropical and is where two of the country's major crops, sugar and citrus, thrive. The Lubombo Escarpment is mountainous and is the dividing line between Swaziland and Mozambique. The climate is sub-tropical with mixed farming being the major activity. The population of Swaziland is approximately 800,000 people, with an agricultural based economy. Like most developing countries, Swaziland has been faced with the dilemma of having to accommodate great environmental changes to provide for its growing population needs. The country's development programme lacks the direction and long-term planning policies that incorporates environmental impact assessment (EIA). Such development includes clearing of large tracts of land for agriculture, removal of wildlife and human beings to marginal lands, excavation of landscape for road networks and mining activities, and the establishment of processing factories without comprehensive waste management plans.
