# **Resource Efficient Cities**

Drivers of Change & Engine to Sustainability

Arab Hoballah Chief Sustainable Consumption and Production, UNEP

### WHY FOCUS ON CITIES ?

- Cities: status and pressures, part of the **Problem** 
  - 3% of land surface
  - 50% of global wastes
  - 60-80% of global GHG emissions
  - 50% world's population now, 80% in 2050
  - 75% of natural resources consumed
- Cities: drivers of growth, part of the Solution
  - ✓ 80% of global GDP produced
  - ✓ Water savings, 30% behavioral changes
  - ✓ Energy savings, 30 to 50% with limited investment

### Opportunities through SCP & Resource Efficiency

### **UNEP's cities related activities**

- Approach based on:
  - SCP and Resource efficiency
    - 1. Buildings
    - 2. Cities
    - 3. Consumption patterns and Efficiency

### Economics

- 1. Cost of inaction
- 2. Benefits
- 3. Incentives

### 10YFP on SCP

#### We promote and encourage resource efficiency in cities

We work with city leaders & other partners to:

- Develop systems and policies that promote integrated sustainable buildings, transport, water & waste management, and urban growth
- Decouple resource use from environmental impacts and economic growth
- Make significant investments in moving toward a green economy and contribute to global sustainability
- Adopt a multi-stakeholder approach in generating sustainable solutions for city development

### UNEP's approach on cities

- Rapid and unplanned urbanization is unsustainable. In the next few decades, it will exacerbate climate change challenges & ecosystem management;
- Urbanization on a new, resource-efficient path will create markets for sustainable products
- Political commitments at Rio+20 for strengthening role of cities can build support for cities & encourage them to act more sustainably

Q

#### What does it do?

- Assist cities in identifying and monitoring their resource footprint
- Links partners and cities interested in resource efficiency
- Coordinate and support the development of clear goals and targets
- Provides access to expertise and support access to funding

### **A Global Initiative for Resource Efficient Cities**

**Objective**: To enhance the quality of life in urban areas, in particular in rapidly growing cities in developing countries, while minimizing resource extraction, energy consumption and waste generation, and while safeguarding ecosystem services

#### **UNEP's Approach to Resource Efficient Cities**

## Global Initiative for Resource Efficient Cities 🙃

UNEP's <u>Approach</u> <u>to</u> **Resource Efficient** Cities

### Global Initiative for Resource Efficient Cities

#### **Resource footprint for cities**

- Research on resource flows and assessments will be developed at city level to contribute to a resource footprint.
- Decision makers will be provided with tools to support and follow progress on the efficient use or resources available to them with adequate policy tools and market instruments.
- Informed decision-making with financial infrastructure savings

### **Global Initiative for Resource Efficient Cities Components of the Global Initiative**

- **1. Research agenda** Dedicated to further knowledge to facilitate decision making and provide access to information for decision makers in various fields related to resource efficiency and sustainable consumption and production; increase access, processing & use of resources through supply chain and LCM;
- **2. Enabling Framework** Offer national and city decision makers access to technical expertise in areas such as policy development and proven practical tools, market incentives and public-private partnership options to support resource efficiency
- **3. Network Platform** To provide a mechanism for decision makers to exchange experiences, share best practices, and establish a peerreview process across cities for further improving access to resources and their efficient use

23

### Global Initiative for Resource Efficient Cities Main Elements of the Global Initiative

- Identify and promote **common indicators** (e.g., for GHG emissions, city environmental performance assessments, Common Carbon Metric in the building sector, etc).
- Provides technical expertise and support for important dimensions of resource efficiency (e.g. supply chain management, life cycle analysis, etc).
- Support the dissemination of good practices and new technologies in key sectors (e.g. energy generation, buildings, transport, waste and water).
- Support the **development of clear goals and targets** (e.g. reducing energy consumption in buildings) and assist cities in accessing the resources needed to achieve them.

#### Suggested Roadmap & next steps

2013

2013

2014

2013

2013

1. **Preparatory work and launch of GI-REC Rio+20** United Nations Conference on Sustainable Development

2. Undertaking a survey of about 300 cities to help them understand i dentify and manage their resource footprint and potential efficiency gains.

3. **Operationalize the GI-REC** – using UNEP's convening ability to mobilize partners, connect cities and source funding

>> GI REC to attract 200 cities by 2015 and 400 by 2020

>> GI-REC to join forces with 50 partners from public and private sector by 2015 and 100 partners by 2020

2015

4. **Develop the research agenda**– Inventory of UNEP's and partners' initiatives and expertise on resource efficiency. Developing relevant methodologies and establishing a set criteria and targets for a model resource efficient city.

5. **Establish Network Platform** – for facilitating exchange of experiences and best practices through regular meetings, conferences and Roundtables and set up of a peer review process across cities

Leading to the development of a **resource footprint** of cities together with partner cities and partners towards more resource efficient cities
