- CPF Sourcebook
- National forest financing strategies
- NFP Facility

## Sourcebook on Funding for SFM

- Database on funding sources has grown to contain 800 entries
- Information on “fundamentals” for fund-raising
- Maintained by FAO on behalf of CPF, in collaboration with NFP Facility
- <http://www.fao.org/forestry/cpf-sourcebook/en/>

## Search the funding sources database

Important notice: Please check eligibility requirements carefully before contacting grant applications are a waste of time for both parties and may lead to grant makers being removed from the database.

Please be advised that FAO is not able to provide verbal or written support to any funding organizations listed on this Web site nor can it be guaranteed that proposals will be funded.

#### Subjects covered

# Target groups served in Sourcebook

## Financing for NLBI implementation - background analysis (FAO)

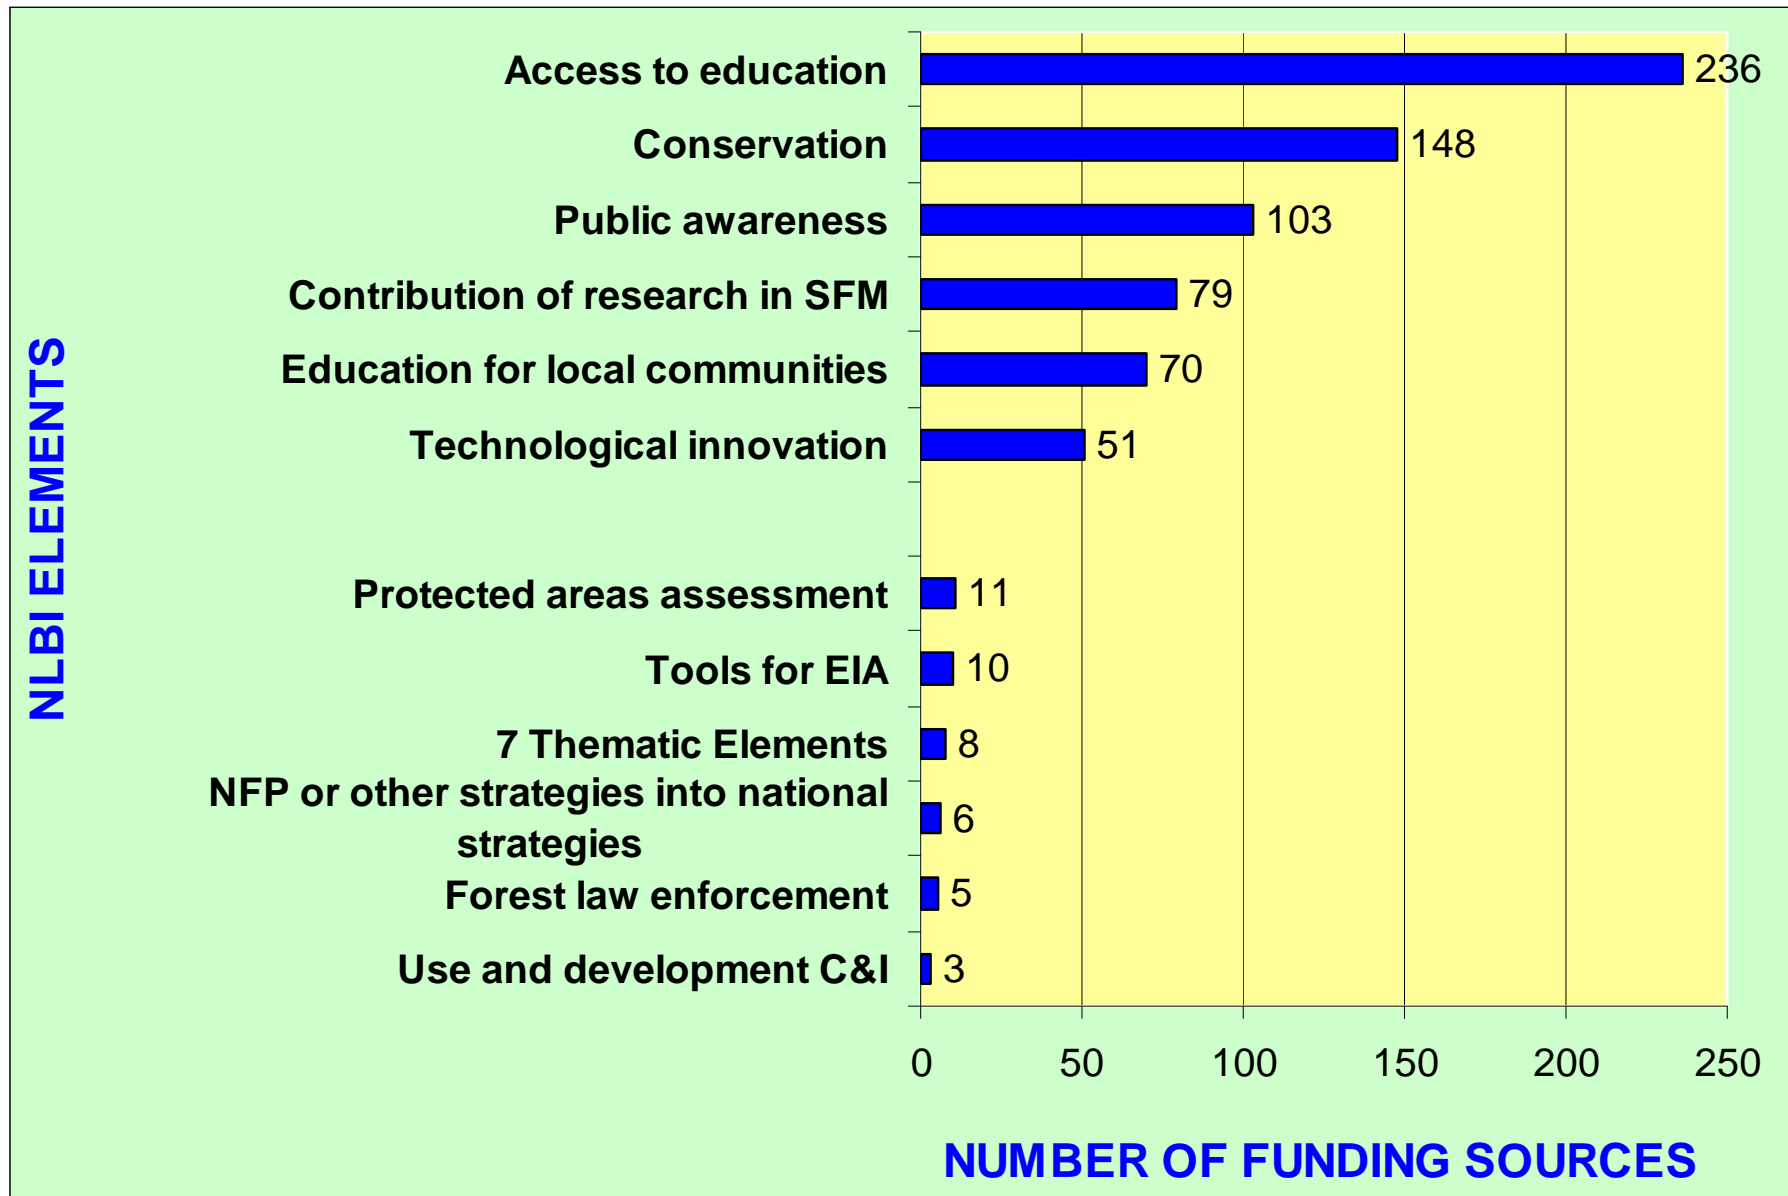

- Identifies some sources of financing that may assist in NLBI implementation
- Examines links between some existing funding sources and national measures of NLBI
- Provides illustrations on delivery and proactive efforts by countries to forest financing
- Full document available at CPF website:  
<http://www.fao.org/forestry/cpf-finance/en/>

## Financing for NLBI implementation - Results

- All NLBI measures covered
- Capacity building and conservation => most covered
- Production and technical activities => least covered
- Fewer sources available to Africa and Latin America than Asia
- Significant donor funding targeting governments
- Innovations occur where forestry less important sector
- Wood producing countries continue to use traditional forest revenue model (concessions)
- The process for seeking funding is arduous and lengthy

# NLBI elements with most and least number of Sourcebook sources

**Forestry**

## **NFPs & National forest financing strategies (NFFS)**

- Collaborative initiative in Latin America on financing mechanisms
- Knowledge sharing initiative to:
  - (a) produce a broad assessment of the experience with financing mechanisms
  - (b) increase the capacity of NFPs for development of national strategies of forest financing

# NFPs & NFFS - Conclusions

- Wide range of financing mechanisms exists, but ad-hoc approaches predominate
- SFM financing constrained in both availability and access, esp:
  - NFM, incorporating social and ecological criteria, small and community forestry
- Variety of purposes and actors require different financing instruments.

# NFPs & NFFS – Conclusions (2)

- Success factors:
  - Supportive policy and institutional environment, including clarity of land tenure
  - Alignment with long-term national priorities and commitments
  - Synergistic incentive packages that combine financing with favorable investment, credit and trade policies
- Framework conditions as key constraint

## Conclusions

- **Access to financing**
  - Increasing availability and facilitating access are key challenges
- **Identify and develop attractive projects**
- **National forest programmes** (NFPs) are key processes
  - to link forestry to economic development and to wider development goals
  - to assess financing needs and mobilize resources for SFM and NLBI implementation
- **National forest financing strategies** are needed to promote SFM more effectively

**FACILITY**  
*nurturing the process*

## **National Forest Programme Facility:**

- **Funding mechanism & information initiative to support NFPs**
- **Supports stakeholder participation**
- **300,000 \$ / country over 3 years**
- **57 partner countries, 4 sub-regional partners**
