PREFACE

For more than a decade the Population Division of the Department of International Economic and Social Affairs of the United Nations Secretariat and the Division of Health Statistics of the World Health Organization (WHO) have been co-operating on a series of studies of mortality and health issues in developing and developed countries. A selected list of recent publications includes *Levels and Trends of Mortality Since 1950*,¹ *Data Bases for Mortality Measurement: Papers of the Meeting of the United Nations/World Health Organization Working Group on Data Bases for Measurement of Levels, Trends and Differentials in Mortality*,² and *Sex Differentials in Mortality: Trends, Determinants and Consequences*.³

In 1981 the United Nations and WHO initiated a series of case studies of mortality determinants in five developing countries: Bangladesh, Guatemala, Kenya, Senegal and Sri Lanka. The purpose of the case studies was to examine the factors related to levels, trends and differentials in mortality in diverse populations in order to illustrate the options facing Governments for setting strategies for reducing mortality and improving health. The present publication is the result of those studies. The case studies were carried out with the collaboration of a number of investigators for the countries concerned. The United Nations and WHO would like to thank the following investigators for their willingness and desire to share their information and expertise among themselves and with the United Nations and WHO: S. D’Souza and S. Zimicki (Bangladesh); H. Delgado, E. Hurtado and V. Valverde (Guatemala); D. Ewbank, R. Henin, J. Kekovole and W. H. Mosley (Kenya); P. Cantrelle, I. L. Diop, M. Garenne, M. Gueye and A. Sadio (Senegal); and S. A. Meegama (Sri Lanka). Throughout the study period S. H. Preston provided continuing advice and guidance to the project investigators as well as to the United Nations and WHO. His commitment helped lead the studies to a successful conclusion. Acknowledgement is due the United Nations Fund for Population Activities, which made the present publication possible through a grant for mortality studies.

CONTENTS

Preface ........................................ iii
Explanatory notes ............................. xi

Chapter

I. MORTALITY STRUCTURE IN FIVE COUNTRIES—AN OVERVIEW
   United Nations Secretariat .......................... 1

II. THE MORTALITY TRANSITION IN SRI LANKA
    S. A. Meegama ........................................ 5

III. AN INTEGRATION OF DEMOGRAPHIC AND EPIDEMIOLOGIC RESEARCH ON MORTALITY
     IN KENYA
    D. Ewbank, R. Henin and J. Kekovole ................. 33

IV. THE PROFILE OF MORTALITY AND ITS DETERMINANTS IN SENEGAL, 1960-1980
    P. Cantrelle, I. L. Diop, M. Garenne, M. Gueye and A. Sadio .... 86

V. MORTALITY STRUCTURE IN MATLAB (BANGLADESH) AND THE EFFECT
    OF SELECTED HEALTH INTERVENTIONS
    S. D'Souza ........................................ 117

VI. EFFECT OF HEALTH AND NUTRITION INTERVENTIONS ON INFANT AND CHILD
     MORTALITY IN RURAL GUATEMALA
    H. L. Delgado, V. Valverde and E. Hurtado ........... 145

LIST OF TABLES

Chapter I

1. Estimates of income and life expectancy in countries included in the case
   studies ........................................ 2

Chapter II

3. Cereals imports to Sri Lanka, 1935-1952 ............................ 8
4. Age-specific death rate per 1,000 of the Sinhalese population, 1920-1922 ... 8
5. Age-specific death rate per 1,000 population in a developed zone (Kalutara
   district): Sinhalese population, 1920-1922 and 1944-1946 ........ 9
6. Age-specific death rate per 1,000 population in a dry zone (North Central
   Province): Sinhalese population, 1920-1922 and 1944-1946 ....... 9
7. Age-specific mortality per 1,000 of the population among different social
   groups in 1920-1922, males ................................ 10
8. Age-specific mortality per 1,000 of the population among different social
   groups in 1920-1922, females ............................ 10
9. Comparison of age-specific mortality rates per 1,000 population in the famine
   year (1974) and in a normal year (1973), the estate sector of Sri Lanka .. 11
10. Neonatal and post-neonatal mortality per 1,000 live births in the estate sector
    and in the rest of Sri Lanka, 1972-1976 .................... 11
11. Selected food imports to Ceylon, 1870-1932 .......................... 11
12. Crude death rate per 1,000 of the Sinhalese in the Nawadun Korale, 1901-1930 ...... 12
13. Crude death rate per 1,000 population, Galle district (including municipality), 1911-1925 . . 12
15. Number of cholera centres and cases in Ceylon during cholera years, 1891-1946 ................ 15
16. Fatality rates of cholera cases, 1891-1936 .......................... 16
17. Population of Colombo, 1824-1946 ................................. 16

Chapter III

42. Distribution of population and population density by district and province, Kenya, 1969 and 1979
43. Health institutions and hospital beds and cots by province, Kenya, 1981
44. Percentage of households by selected social indicators and province, Kenya, 1976-1977
45. Estimates of the infant mortality rate, expectation of life at birth, and crude death rate, districts of Kenya
46. Regression analysis of district infant mortality rates (IMRs) for 1969 and 1979 and of the change in infant mortality, 1969-1979
47. Regression analysis of the ratio of deceased children to expected number deceased, Kenya Fertility Survey, 1977-1978
48. Child mortality indices, q(2), by education of mother, Kenya, 1979
49. Evidence from Machakos on the effect of maternal education on the treatment of measles, 1975
51. Infant mortality and still births by birth order, Machakos Project, 1975-1976
52. Infant mortality and still births by maternal age, Machakos Project, 1975-1976
53. Still births and infant deaths per 1,000 terminations of pregnancy, by birth order and maternal age, Machakos Project, 1975-1976
55. Child mortality due to respiratory infections and gastro-enteritis (diarrhoea) by district, Registrar General's data, Kenya, 1977
56. Comparison of hospitalized patients with diarrhoea, Nairobi, Kisumu and Mombasa ......................................................... 58
57. Comparison of mortality by age five and nutritional status indicators, urban and rural areas of provinces, second national nutrition survey, Kenya, 1978-1979 ......................................................... 61
58. Age-specific mortality rates before, during and after a malaria spraying programme, Mkomazi Valley of Tanzania, 1954-1966, and comparison values from the malaria-free Mamba area, 1962-1966 ......................................................... 63
59. The effect of malaria eradication on mortality in the Kisumu area of Nyanza province, 1972-1975 ......................................................... 64
60. Annual cancer incidence by site and sex, Kyadondo, Uganda, and ratio of reported to rate expected from Norwegian statistics for 1968-1972 ......................................................... 65
61. Annual rates of registration of tuberculosis (respiratory and non-respiratory), previously untreated new cases per 100,000 population, 11 districts, Kenya 1964 and 1974, by age and sex ......................................................... 67
62. Registrations of new cases of tuberculosis by district and region, Kenya, 1964-1979 ......................................................... 68
63. Summary of causes of death, Kenya, 1979 ......................................................... 70
64. Measures of the impact of reducing the major causes of death, Kenya, 1979 ......................................................... 72
65. Estimated healthy days of life saved and discounted healthy days of life saved, major causes of death, Kenya, 1979 ......................................................... 74

Chapter IV
66. Profile of the structure of GDP by sector, Senegal, 1960 to 1980 ......................................................... 88
67. Population distribution by region, Senegal, according to various data sources, 1960-1978 ......................................................... 89
68. Senegal population estimates, according to region, 1955-1981 ......................................................... 90
69. Estimates of birth rates (per 1,000 population), Senegal, by region, from various surveys, 1960-1979 ......................................................... 90
70. Estimates of birth and death registration completeness observed between the first and last rounds of the 1970-1971 and 1978-1979 demographic surveys ......................................................... 93
71. Indicators of the quality of age data, 1960-1979 ......................................................... 93
74. Changes in mortality indicators, 1960-1978 ......................................................... 94
75. Distribution of deaths by age in 1978 ......................................................... 95
76. Mortality indicators in Dakar, both sexes combined, 1973-1980 ......................................................... 95
77. Mortality indicators in Saint-Louis, both sexes combined, 1973-1980 ......................................................... 96
78. Percentage of total deaths due to major causes, by sex, cause and age, Dakar, 1973-1980 ......................................................... 97
79. Percentage of total deaths due to major causes, by sex, cause and age, Saint-Louis, 1973-1980 ......................................................... 97
80. Neonatal, post-neonatal and childhood mortality rates, by certain demographic characteristics ......................................................... 99
81. Neonatal, post-neonatal and childhood mortality rates, by region of residence ......................................................... 100
82. Neonatal, post-neonatal and childhood mortality rates, by mother's ethnicity ......................................................... 100
83. Neonatal, post-neonatal and childhood mortality rates, by mother's religion ......................................................... 100
84. Neonatal, post-neonatal and childhood mortality rates, by mother's and father's education ......................................................... 101
85. Neonatal, post-neonatal and childhood mortality rates, by urban or rural residence ......................................................... 101
86. Results of the regression of child mortality on socio-economic variables and environmental variables, 1978 Senegal Fertility Survey ......................................................... 102
87. Results of the regression of child mortality on socio-economic variables and demographic variables, 1978 Senegal Fertility Survey ......................................................... 102
88. Results of the regression of child mortality on socio-economic variables and occupation variables, 1978 Senegal Fertility Survey ......................................................... 102
89. Monthly variations in mortality in 1970, Senegal ......................................................... 103
Population and vital rates in Ngayokhème during the period 1963-1981

Comparison of probability of dying between the ages of 0 and x years, q(x), observed in the survey with those based on follow-up of pregnancies (children born during the survey)

Mortality by year in Ngayokhème (all residents) and its relationship to rainfall and millet and ground-nut production, 1963-1981

Death rate according to age and period for Ngayokhème, 1963-1981

Life table from age 0 to 10 years for Ngayokhème, both sexes combined, 1963-1971

Life table from age 0 to 10 years for Ngayokhème, both sexes combined, 1972-1981

Death rate according to age and season for Ngayokhème, 1963-1981

Ratio of death rate in rainy season to death rate in dry season, according to age and period for Ngayokhème, 1963-1981

Weaning table for children born during the survey in Ngayokhème, 1963-1981, both sexes combined

Central death rates according to age and nursing status, Ngayokhème, 1963-1981

Proportion of children not living with their mothers, according to survival status in 1981, Ngayokhème

Deaths according to age, cause and period in Ngayokhème, 1963-1981

Multiple decrement table of vaccination and measles risks, Ngayokhème, 1963-1981

Death rate according to age and sex in Ngayokhème, 1963-1981

Death rate under age 5 by cause of death in Ngayokhème, 1963-1981

Differences in death rate due to measles, according to sex, between the ages of 0 and 14 years, Ngayokhème, 1963-1981

Mortality due to measles (per 100,000) at age 1-4 years, according to country and sex

Neonatal, post-neonatal and infant mortality rates (per 1,000 live births), Matlab, 1966-1981

Number of infant deaths by sex and age in months, Matlab, 1979 and 1980

Mortality rates (per 1,000) at ages 1-4 for both sexes, by education (years of completed schooling) of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) at ages 1-4 for both sexes, by the highest education (years of schooling) in the family, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) at ages 1-3 for both sexes, by education (years of schooling) of mother, for the 1974 birth cohort followed through 1977, Matlab, Bangladesh

Mortality rates (per 1,000) in three age groups for both sexes, by education (years of schooling) of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of children aged 1-4 years, by mother's education, five selected villages in Matlab, Bangladesh, 1980

Mortality rates (per 1,000) of various age groups for both sexes, by occupation of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups for both sexes, by area of dwelling of households, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups by number of cows owned per household, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups for both sexes, by use of latrine in households, Matlab, Bangladesh, 1974-1977

Chapter V

Crude birth and death rates and rates of natural increase in Matlab, 1966-1981

Crude death rates, Bangladesh, 1881-1974

Neonatal, post-neonatal and infant mortality rates (per 1,000 live births), Matlab, 1966-1981

Number of infant deaths by sex and age in months, Matlab, 1979 and 1980

Mortality rates (per 1,000) at ages 1-4 for both sexes, by education (years of completed schooling) of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) at ages 1-4 for both sexes, by the highest education (years of schooling) in the family, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) at ages 1-3 for both sexes, by education (years of schooling) of mother, for the 1974 birth cohort followed through 1977, Matlab, Bangladesh

Mortality rates (per 1,000) in three age groups for both sexes, by education (years of schooling) of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of children aged 1-4 years, by mother's education, five selected villages in Matlab, Bangladesh, 1980

Mortality rates (per 1,000) of various age groups for both sexes, by occupation of household head, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups for both sexes, by area of dwelling of households, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups by number of cows owned per household, Matlab, Bangladesh, 1974-1977

Mortality rates (per 1,000) of various age groups for both sexes, by use of latrine in households, Matlab, Bangladesh, 1974-1977
123. Estimates of child mortality between birth and age x, q(x), by educational level of mothers, Bangladesh .......................................................... 128
124. Mortality rates (per 1,000) for children of both sexes aged 1-4 years, by education of household head and other socio-economic variables, Matlab, Bangladesh, 1974-1977 ........................................ 129
125. Infant (0-11 months) and early childhood (1-4 years) mortality, by sex and major causes of death in Matlab, Bangladesh, 1975-1977 ........................................ 130
126. Number of infant deaths, by sex, reported cause of death and age at death in months, Matlab, Bangladesh, 1980 ........................................ 130
127. Causes of death at Companiganj, according to sex, percentage and rate per 100,000 (cumulative 1975-1978), all ages combined ........................................ 131
128. Clinic attendance rates per 1,000 in 1977-1978 and 1979-1980, by distance, study and comparison areas ........................................ 133
129. Crude birth and death rates and rates of natural increase for the maternal and child health–family planning and comparison areas in Matlab, 1978-1981 ........................................ 134
130. Neonatal and post-neonatal mortality rates (per 1,000 live births), Matlab, 1978-1981, for the maternal and child health–family planning and comparison areas ........................................ 134
131. Age/sex-specific death rates (per 1,000) for children under 5 years of age, for the maternal and child health–family planning and comparison areas in Matlab, 1978-1981 ........................................ 134
132. Number of live births between 1 September 1978 and 31 December 1979 according to the immunization status of their mothers ........................................ 137
133. Neonatal and 4-14 day mortality among the live birth cohort (1 September 1978-31 December 1979), according to maternal immunization status ........................................ 138
134. Items of comparison between Matlab and Companiganj health projects ........................ 140
135. Summary of cost-effectiveness figures, Matlab treatment centre and Sotaki clinic ........................................ 140

Chapter VI

136. Demographic indicators in Central American countries and Panama .......................... 146
137. Probability of dying during the first two years of life (1,000 q(2)) in the Central American countries and Panama ........................................ 146
138. Death rates per 100,000 for specific causes in children under 1 and aged 1-4 years in Central American countries and Panama around 1980 ........................................ 146
139. Nutritional status of children under 5 years of age, and daily calorie and protein supply per capita in Central American countries and Panama, 1966-1980 ........................................ 147
140. Health resources and expenditure in public services in Central American countries and Panama ........................................ 148
141. Probability of dying during the first two years of life per 1,000 live births, by department and residence in Guatemala, 1961 and 1970, based on national samples of the censuses of 1964 and 1973 ........................................ 152
142. Probability of dying during the first two years of life per 1,000 live births, by region, ethnicity and residence in Guatemala, 1961 and 1970, based on national samples of the censuses of 1964 and 1973 ........................................ 152
143. Illustrative page of therapeutic guide prepared for the Growth and Development Project, Guatemala ........................................ 153
144. Beneficial, harmless and harmful practices of traditional midwives in San Pablo, La Laguna, Sololá, Guatemala, 1976-1977 ........................................ 155
145. Infant mortality in the study population of the Patulul Project ........................................ 157
146. Infant mortality rates per 1,000 live births in the project villages before and during the Sololá health interventions ........................................ 157
147. Infant mortality rates per 1,000 live births in four Ladino Guatemalan villages before, during and after the health and nutritional intervention of the Growth and Development Project ........................................ 157
148. Percentage of newborns with low birth weight (≤ 2.5 kg) and short gestational age (< 37 weeks), by terciles (low, middle, high) of supplement intake during the first trimester of pregnancy ........................................ 157
149. Trimestral weight-for-age percentage changes in children 0-24 months of age in different categories of initial percentages of weight-for-age, gastro-intestinal disorders and utilization of health services during the trimester ........ 160
150. Neonatal and post-neonatal deaths, by cause of death and age for both sexes combined ................................................. 162

LIST OF FIGURES

Chapter V

I. Infant (neonatal and post-neonatal) mortality rate, child (1-4 years) death rate, and crude death rate in Matlab, Bangladesh, 1966-1981 .... 121
II. Ratio of female to male mortality rates for children under 5 years of age, Matlab, Bangladesh, 1974-1977 .................................................. 122
III. Mortality rates of children aged 1-4 years, by education of household head, 1974-1977 ................................................................. 124
IV. Mortality rates of children aged 1-4 years, by number of cows owned by the household, 1974-1977 ..................................................... 128
V. Death rates per 1,000 population, by landholding and cause, Companiganj, 1975-1976 and 1977-1978 ......................................................... 132
VI. Number of deaths of infants, children aged 1-4 years, adults aged 5+ years in treatment and comparison areas, during 1978 and 1979, by quarter ............. 136
VII. Number of infant deaths (per 1,000 surviving infants), according to day after birth (3-day moving average) and maternal tetanus immunization status, for infants born between 1 September 1978 and 31 December 1979, in Matlab, Bangladesh ............................ 137
VIII. Weight in kilograms by age in months for male children under 60 months ............................................................ 138

Chapter VI

IX. Age-specific mortality rates in 1961 and 1971 for Guatemala males (total and major causes of death) ........................................... 149
X. Age-specific mortality rates in 1961 and 1971 for Guatemala females (total and major causes of death) .................................................. 150
XI. Mortality rates in children aged 0-4 years between 1961 and 1971, by sex and causes of death, Guatemala ............................................ 151
XII. Stillbirth death ratio and neonatal and post-neonatal mortality rates by gestational age, 1969-1977 birth cohorts ............................... 158
XIII. Stillbirth death ratio and neonatal and post-neonatal mortality rates by birth weight, 1969-1977 birth cohorts ........................................ 158
XIV. Infant mortality rate by categories of gestational age and birth weight 158
XV. Weight of children before, during and after weaning, as compared with National Centre for Health Statistics reference ...................... 159
XVI. Gastro-intestinal illness episodes and average number of visits to the clinic for gastro-intestinal disorders per trimester ........................ 159
XVII. Conditional probability of visiting the clinic, given a gastro-intestinal illness episode, per sex and trimester ................................. 160
XVIII. Age-specific weight-for-age deficit in children participating in a health and nutritional intervention, males only .............................. 161
XIX. Age-specific length-for-age deficit in children participating in a health and nutritional intervention, males only .............................. 161
XXIII. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by birth order, 1960-1968 birth cohorts ................................. 164
XXIV. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by birth order, 1969-1977 birth cohorts .................................................. 164
XXVI. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by previous birth interval, 1960-1968 birth cohorts ................................................. 165
XXVII. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by previous birth interval, 1969-1977 birth cohorts .............................................. 165
XXIX. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by maternal education level, 1960-1968 birth cohorts ............................................. 166
XXX. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by paternal education level, 1960-1968 birth cohorts ............................................ 166
XXXI. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by maternal education level, 1969-1977 birth cohorts ........................................... 166
XXXII. Stillbirth death ratio and neonatal and post-neonatal mortality rates, by paternal education level, 1969-1977 birth cohorts ......................................... 167

LIST OF MAPS

Chapter II
1. Ceylon: distribution of rural and urban population, 1946 .................. 6

7. Life expectation at age 20, Kenya ........................................... 46

Chapter IV
8. Administrative regions of Senegal ........................................ 87

Explanatory notes

The term “country” as used in the text and tables of this publication also refers, as appropriate, to territories or areas.

The designations “developed” and “developing” economies are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The following symbols have been used in the tables throughout the report:
Two dots (..) indicate that data are not available or are not separately reported.
A dash (-) indicates that the amount is nil or negligible.
A hyphen (-) indicates that the item is not applicable.
A point (.) is used to indicate decimals.
A slash (/) indicates a crop year, a school year or a financial year, e.g., 1981/82.

Use of a hyphen (-) between dates representing years, e.g., 1981-1983, signifies the full period involved, including the beginning and end years.

Reference to “dollars” ($) indicates United States dollars, unless otherwise stated.
Annual rates of growth or change, unless otherwise stated, refer to annual compound rates.
Details and percentages in tables do not necessarily add up to totals, because of rounding.
