Ages 55 to 60 years for both men and women and tends to be lower than that in developed regions of the world. In many developing countries, the age of retirement for men is generally lower than 60 years.

Life expectancy at age 60. The world has experienced dramatic increases in longevity. Despite the pronounced increase observed in the past several decades in the life expectancy at age 60, the increase has been less than half that observed at age 40. This may be because people who reach age 60 have already experienced a large increase in life expectancy. The life expectancy at age 60 is below 70 years in developing regions and below 80 years in developed regions. For example, the life expectancy at age 60 is around 74 years in Brazil, 76 years in China, 77 years in India, and 83 years in Japan.

The difference in the dependency ratio between the sexes is larger in developed regions of the world because, on average, women live longer than men and the dependency ratio is thus lower. In the year 2011, there were 12 men aged 60 or over for every 10 women of the same age. By 2050 and projected to fall by 65:8 of working age per person aged 65 or over in 2011. An ageing population has serious implications for the economy and the financial well-being of individuals. Not only does it raise the number of people who are dependent on their savings and on the State, but it also affects the productivity of the workforce, which can lead to a decline in economic growth. It is important to note that the dependency ratio can vary significantly between regions and countries. For example, in developed regions of the world, the dependency ratio is lower than in developing regions of the world. In the year 2011, there were 12 men aged 60 or over for every 10 women of the same age. By 2050 and projected to fall by 65:8 of working age per person aged 65 or over in 2011.
In developed countries, the rural population is growing than the total population in practically every region of the world. In less developed countries, the rural population is growing faster than the total population, and adults are leaving rural areas to seek work in cities and towns. The rural population is growing faster in less developed countries than in more developed countries.

The population aged 60 or over is growing faster than the total population in practically every region of the world. In less developed countries, the rural population is growing faster than the total population, and adults are leaving rural areas to seek work in cities and towns.
