A hyphen (−) indicates that the Government has not made a judgement about the stage reached by a particular indicator. A dash (−) indicates that data are not available. In some cases, the dash may indicate that the indicator is not applicable or not relevant to the country or region.
### The global AIDS epidemic in 2007

The global AIDS epidemic in 2007

Although the last two decades have witnessed tremendous gains in the fight against HIV/AIDS, the epidemic remains one of the greatest challenges in the field of global health. Since the disease was first identified in 1981, over 60 million people have been infected and 25 million people have died of HIV/AIDS. As of 2008, 36.1 million people were living with HIV/AIDS, and 2.1 million children were newly infected with HIV each year according to UNAIDS estimates. The epidemic remains one of the greatest challenges in the field of global health.

#### Adult HIV prevalence

- **Less than 0.1%**
- **0.1% to 0.49%**
- **0.5% to 0.99%**
- **1.0% to 4.99%**
- **5.0% to 14.99%**
- **15.0% and above**
- **No data**

#### Population and HIV/AIDS 2010

Although the last two decades have witnessed tremendous gains in the fight against HIV/AIDS, the epidemic remains one of the greatest challenges in the field of global health. Since the disease was first identified in 1981, over 60 million people have been infected and 25 million people have died of HIV/AIDS.
