# ADDRESSING RURAL POVERTY THROUGH RURAL AND AGRICULTURE FINANCE

CSD- LEARNING CENTER MAY 8, 2008

Prof. Puneetha Palakurthi
School of Community Economic Development
Southern New Hampshire University

### **ACKNOWLEDGEMENTS**

THE MATERIALS PRESENTED ARE BASED ON USAID TRAINING ON RAF & FAO COURSE ON RURAL FINANCE.

## INTRODUCTION ACTIVITY (15 minutes)

- •How would you categorize your level of knowledge in RAF? (beginner/intermediate/advanced)
- •What activity are you working on that is related to RAF?
- •To your knowledge, what is the state of RAF in the country/region where you work?
- •Is there any knowledge or experience relating to RAF that you want to/could share with others?

WHAT IS RURAL & AGRICULTURE FINANCE?

Discussion – 5 minutes

### Glossary

**Agricultural finance:** A field of work in which people aim to improve the access of the agriculture industry, including farmers and all related enterprises, to efficient, sustainable financial services.

**Rural finance:** A field of work in which people aim to improve the access of rural communities to efficient, sustainable financial services.

**Microfinance**: Financial services for lower-income households and micro and small enterprises; a diverse range of financial institutions offers microfinance services, including specialized microfinance institutions (MFIs), commercial banks, and NGOs.

**Value chain**: The series of transactions necessary to bring a product from inputs to the final market, involving a process of adding value at every stage.

**Financial institution**: An entity – regulated or not – that *specializes* in the provision of financial services

**Financial intermediary**: A financial institution that *collects, deposits, and lends* these deposits.

### History of Agricultural Lending Programs

#### 1950s and 1960s...

- Governments wanted to stimulate the adoption of new agricultural technologies
- Donor-driven and government-sponsored credit programs were designed that included:
  - Specified beneficiaries
  - Specified agricultural commodities
  - Subsidized interest rates

### **Brainstorm Activity**

### 10 -15 minutes

What have been the historic problems with directed agricultural loan programs?

What lessons were learnt?

### History of Agricultural Lending Programs

#### Results

- Primarily large farmers served
- Credit funds diverted
- Loan repayment indiscipline
- Alternative funding crowded-out
- Technology expansion not supported
- Non-farm financial needs not addressed
- Financial institutions not operating sustainably
- Vigorous rural financial markets blocked

## History of Agricultural Lending Programs

#### **Lessons Learned:**

- Farmers have broader financial service needs than just credit for agricultural inputs
- For financial institutions to be sustainable, they need to have diversified portfolios not dependent upon a single sector
- Transaction costs, especially for smaller farmers, were high
- Publicly-owned institutions undermined by political interventions
- Liberal supply of liquidity, even if not subsidized, from donors and governments discourages banks from developing own resources (mobilizing deposits).

## WHY RURAL AND AGRICULTURE FINANCE?

- Reason #1 There is a decline in formal rural and agricultural credit supply
- Reason #2 Rural finance is important for agricultural and economic growth, food security, and poverty reduction
- Reason #3 We have learned from the past!

### **Designing RAF**

- Understand Rural Markets both supply
  & demand side
- •RAF Market Assessment
- •RAF Project Design

### **Understanding Rural Markets**

- Demand for rural and agricultural finance: Who are the clients?
- Supply of finance and financial services: Who are the providers?
- Enabling Environment: What is it?

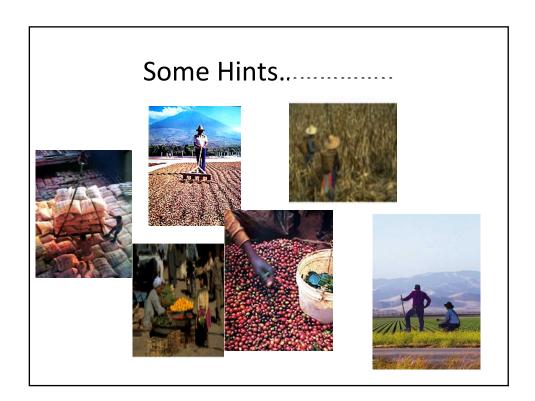

## Demand for RAF: Brainstorming Activity – 15 minutes

Rural and Agricultural Finance:

Who are the <u>demanders or clients</u> of financial services or financial products?

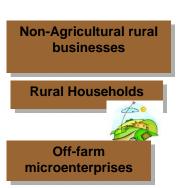

What are their financial needs?

What kind of <u>financial products</u> could fulfill those needs?

## Demanders of Rural and Agricultural financial services

### **Financial Service Needs**

- Build new plant
- Purchase new equipment
- Cash flow management

Local Traders and Processors

- Purchase truck
- Purchase farm inputs and output
- Cash flow management
- Income smoothing

- Purchase of fixed assets (land, tractors, etc.)
- Purchase inputs (seed, fertilizer, labor)
- Mitigate risk (crop insurance)
- Cash flow management Income smoothing

### Input Suppliers

- Purchase Inventory
- Cash flow management

### **Financial Service Needs**

Rural Households

- Purchase inventory
- Purchase of fixed assets
- Cash flow management

- Income smoothing and savings instruments
- Mitigate risk (health insurance)
- Access to remittances
- Life events

Cash flow management
Risk management (e.g. floods,
fire)

Fixed investments (e.g. sewing

Off-farm microenterprise

**Financial Service Needs** 

### **Overarching Categories**

- Working Capital
- Fixed Asset Financing
- Income Smoothing
- Life Cycle Events

## What Do We Want in Rural Financial Services?

We want diverse rural financial service providers, who:

- 1.Are viable and sustainable
- 2. Service all segments of the rural population
- 3.Collectively provide a full range of financial services
- 4. Have costs of service compatible with the returns to capital of the population

## Financial Products that Clients Want

- Quick service
- Flexible loan amounts and terms
- Cost effective
- Not just working capital
- Choices of financial providers
- Diversity of products
- Serve household and business needs
- Not require traditional collateral

## Key Challenges and Constraints to Demand Constraints to Lenders:

- Covariant risk
- Policy and regulatory constraints
- Political meddling and crowding out through subsidized credit programs
- Underdeveloped human capital (illiteracy, health, etc.)
- Low levels of economic activity, low ag productivity and profitability
- Poor physical infrastructure (roads, etc.)

## The impact of the key challenges and constraints on demand is...

### High transaction costs for the borrower

- -Problems producing adequate collateral
- –Low productivity and profitability leading to low incomes and opportunities for growth

#### Also....

-Higher *real and perceived risk* to lender, which affects the borrower

### Key Challenges and Constraints – Supply side

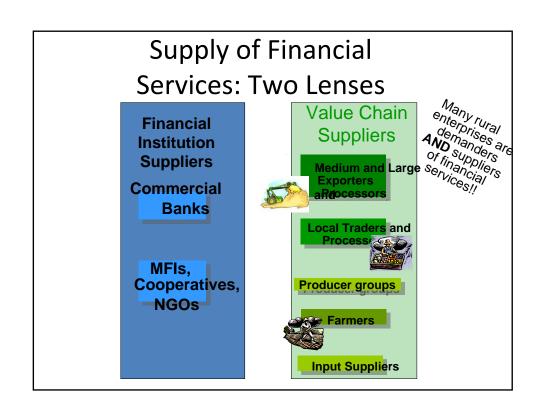

- Lack of defined property rights and contract enforcement mechanisms in rural areas
- Geographic dispersion of clients
- Seasonality of agriculture
- Covariant risk
- Lack of registered credit history
- Other policy and regulatory constraints
- Political meddling and crowding out through subsidized credit programs
- Underdeveloped human capital (illiteracy, health, etc.) and low agril productivity and profitability
- Poor physical infrastructure (roads, etc.)

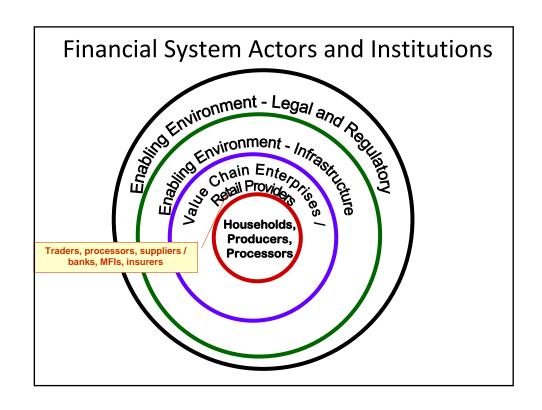

### **Key Challenges and Constraints**

### The impact of these constraints on supply is...

- High operating costs for the lender
- High information costs for the lender
- Higher real and perceived risk for the lender

Could this be why many financial institutions do not lend in rural areas or to agriculture-related activities?

### **RAF Market Assessment**

- DEAMAND
- SUPPLY
- SUPPRTING ISTITUTIONS
- LEGAL & REGULATORY FAMEWORK
- POICY FRAME WORK

#### Framing a RAF Market Assessment Demand analysis Secondary Research Assessment Intervention Fin'l service analysis Mapping **Analysis** Design Interviews Enabling env. analysis √ identify possible ✓ recommend ✓ review existing ✓ Research interventions that commercially Questions best facilitate viable solutions to √ map key actors √Plan financing key constraints and relationships ✓ Team ✓ prioritize √ validate/prioritize orientation possible solutions key constraints -√ assess and in product and validate feasibility financial markets -to up-grading and of target solutions growth Plan Identify Key Constraints and Prioritize **Promising Commercial Solutions** Interventions Assessment

### How to analyze the market - Demand Side

#### Secondary Research Interviews

Demand analysis Fin'l service analysis

Formal financial institutions: financial institutions subject to prudential norms and regulation (e.g. banks)

Semi-formal financial institutions: subject to laws/regs but not prudential regs (e.g cooperatives, credit unions, other non-deposit taking entities)

Informal financial institutions: not subject to laws/regs (e.g. ROSCAs)

## How to analyze the market- supply side

#### Secondary Research Interviews

Demand analysis *Fin'l service analysis* 

- Loans
- Deposits
- Insurance
- Leasing
- Money transfers
- Payments

#### How to analyze the market – supply side

#### Secondary Research Interviews

Demand analysis Fin'l service analysis

- Industry analysis
  - Numbers and types of financial institutions, share of financial services market in terms of volume of business, client base and market coverage
  - Trends (SWOT analysis may be useful)
- Institutional analysis
  - Performance assessment in terms of outreach, profitability and efficiency
  - Qualitative and quantitative analysis of ownership, governance, capitalization, etc. based on various appraisal formats (CAMEL, PEARLS, GIRAFE, The Mix <a href="https://www.mbbmix.org">www.mbbmix.org</a>, etc.)

### **CADE STUDY WORK**

- WORK IN 4 GROUPS
  - Read the case given to you by your facilitator and then respond to following two questions
    - What constraints you find with regard to enabling environment?
    - What is the consequence of that constraint?

Actors	Constraint	Potential Solution
Input Supply	Need for higher-quality seed grown by smallholders, and provision of inputs on credit to producers	Increased inventory financing
Small-holder Production	Need for outgrower schemes through producer associations, and contract farming with technical assistance	Ease association registration and access to inputs
Commercial Production	Need for production of higher- value products	More access to credit for expansion of production
Processing	Need for processing of higher- value products, and oilcake processing	Access to equipment financing, leasing, and trade financing
Financial Institutions	Disincentives for banks to lend	Liberalize T-bill market, pilot product for lending, design effective training
Enabling Environment Institutions	Registration of associations very difficult, Weak judicial system undermines value of collateral	Revise requirements, brokers link small-holders to key services, legal/judicial reform

## Rural Finance Program Design Framework<sup>1</sup>

Participant Profile	Operating Environment & Context	Existing Operators and Services
Interventions	Methodology and Products	Delivery Mode: Direct or Partnership
Desired Impact	Program Efficiency	Sustainability and Scale

### Impact & Indicators

Brainstorm activity – what are common indicators -

- For agricultural projects
- For financial projects
