1. This map was created using ESRI ArcGIS and Geocap AS GIS software with spatially correct data referenced to the World Geodetic System 1984 (WGS 84) Spheroid, Semimajor Axis: 6378137.000000, Semiminor Axis: 6356752.3142452, Inverse Flattening: 298.257224.
2. The background gridded bathymetry is derived from ETOPO1, a public domain data set obtained from the National Oceanic and Atmospheric Administration (NOAA) National Geodetic Data Center (NGDC).
3. The area relevant to Federated States of Micronesia's (FSM) extended continental shelf is depicted by the un-shaded area.
4. Depiction of 200 M lines other than FSM is based on the best available data at the time of analysis and should not be taken to signify acceptance or endorsement by FSM of the validity at international law of the non-submitting State's basepoints from which they are drawn.
5. The term, "extended continental shelf" is used to refer to that part of the continental shelf defined under UNCLOS Article 76 that lies beyond 200 nautical miles from the territorial sea baseline of FSM.
6. Data used to depict "Land" for Papua New Guinea and Indonesia is a product of the U.S. National Geospatial-Intelligence Agency (formerly Defense Mapping Agency) and may not necessarily align with the territorial sea baseline data produced by the individual States.
7. The graphical and text information on this map is derived from the information contained in the Minutes of Meeting of the Ninth Session of the Working Group to be held under Article 76 of the United Nations Convention on the Law of the Sea (UNCLOS) for the purposes of determining the outer limits of the continental shelf of FSM.

The outer limit of the continental shelf of Federated States of Micronesia in the Eauripik Rise region showing the provisions of article 76 invoked.
