

United Nations Convention on the Law of the Sea

Commission on the Limits of the Continental Shelf

SUMMARY OF RECOMMENDATIONS OF THE COMMISSION ON THE LIMITS OF THE CONTINENTAL SHELF IN REGARD TO THE PARTIAL SUBMISSION MADE BY THE REPUBLIC OF SOUTH AFRICA IN RESPECT OF THE AREA OF THE SOUTH AFRICAN MAINLAND ON 5 MAY 2009¹

Recommendations prepared by the Subcommission established for the consideration of the Partial Submission made by the Republic of South Africa

Approved by the Subcommission on 4 August 2016

Approved by the Commission, with amendments, on 17 March 2017

¹ The aim of this Summary is to provide information which is not of confidential or proprietary nature in order to facilitate the function of the Secretary-General in accordance with Rule 11.3 of Annex III to the Rules of Procedure of the Commission(CLCS/40/Rev.1). This Summary is based on excerpts of the Recommendations and may refer to material not necessarily included either in the full Recommendations or this Summary.

GLOSSARY OF TERMS

200 M line	Line at a distance of 200 nautical miles from the baselines from which the breadth of the territorial sea is measured
2,500 m isobath	A line connecting the depth of 2,500 metres
Article 76	Article 76 of the Convention
Baselines	Baselines from which the breadth of the territorial sea is measured
BOS	Base of the continental slope
Commission	Commission on the Limits of the Continental Shelf
Convention	United Nations Convention on the Law of the Sea of 10 December 1982
Depth constraint	Constraint line determined at a distance of 100 M from the 2,500 m isobath
Distance constraint	Constraint line determined at a distance of 350 M from the baselines from which the breadth of the territorial sea is measured
Distance formula line	Line delineated by reference to fixed points determined at a distance of not more than 60 nautical miles from the foot of the continental slope
Distance formula point	Fixed point determined at a distance of not more than 60 nautical miles from the foot of the continental slope
DOALOS	Division for Ocean Affairs and the Law of the Sea, Office of Legal Affairs, United Nations
FOS	Foot of the continental slope
Guidelines	Scientific and Technical Guidelines of the Commission (CLCS/11 and CLCS/11/Add.1)
M	Nautical mile
Rules of Procedure	Rules of Procedure of the Commission (CLCS/40/Rev.1)
Secretary-General	Secretary-General of the United Nations
Sediment thickness formula line	Line delineated by reference to the outermost fixed points at each of which the thickness of sedimentary rocks is at least 1 per cent of the shortest distance from such point to the foot of the continental slope
Sediment thickness formula point	Fixed point at which the thickness of sedimentary rocks is at least 1 per cent of the shortest distance from that point to the foot of the continental slope

(page left intentionally blank)

I. INTRODUCTION

- 1 On 5 May 2009, the Republic of South Africa (hereafter referred to as "South Africa") submitted to the Commission on the Limits of the Continental Shelf, through the Secretary-General¹ of the United Nations, information on the limits of the continental shelf beyond 200 M from the baselines from which the breadth of the territorial sea is measured, in accordance with paragraph 8 of article 76 of the Convention (the "Submission").
- 2 The Convention entered into force for South Africa on 22 January 1998.
- 3 The partial Submission covered three regions which will be dealt with separately in these recommendations: the West Coast (the Atlantic Continental Margin); the Agulhas Plateau and environs; and the East Coast (Mozambique Ridge Margin). According to the submitting State, this is a partial submission, bearing in mind the intention of South Africa to present a joint submission in connection with other areas.
- 4 On 5 May 2009, the Secretary-General issued Continental Shelf Notification CLCS.31.2009.LOS giving due publicity to the Executive Summary of the Submission in accordance with rule 50 of the Rules of Procedure of the Commission.² Pursuant to rule 51 of the Rules of Procedure, the consideration of the Submission was included in the agenda of the twenty-fourth session of the Commission.
- 5 Pursuant to section 2 of Annex III to the Rules of Procedure, a presentation of the Submission was made to the plenary of the twenty-sixth session of the Commission on 23 August 2010. Ambassador Baso Sangqu, Permanent Representative of the Republic of South Africa to the United Nations and head of delegation, introduced the delegation of South Africa and Ms. Sandea de Wet, Chief State Law Adviser, delivered the presentation. The Delegation of South Africa (the "Delegation") also included a number of advisers. In addition to elaborating on substantive points of the Submission, Ms. De Wet indicated that Mr. Harald Brekke, a member of the Commission³, had assisted South Africa by providing scientific and technical advice with respect to the Submission.
- 6 The Commission then met in private and noted that it had not received any note verbales from other States in relation to the Submission.
- 7 The Commission addressed the modalities for the consideration of the Submission and decided that, as provided for in article 5 of Annex II to the Convention and in rule 42 of the Rules of Procedure, the Submission would be addressed through the establishment of a Subcommission.
- 8 On 19 November 2013, South Africa submitted an amendment to its Submission.
- 9 The Subcommission for the consideration of the Submission made by South Africa in respect of the mainland of the territory of South Africa was established on 14 February 2014 during the plenary of the thirty-fourth session of the Commission. The following members of the Commission were appointed as members of the Subcommission: Messrs. Charles, Glumov, Haworth, Kalngui,

¹ On whose behalf the Submission was received by DOALOS.

² See Continental Shelf Notification CLCS.31.2009.LOS at
http://www.un.org/Depts/los/clcs_new/submissions_files/zaf31_09/zaf_clcs31_2009e.pdf.

³ Mr. Brekke was a member of the Commission from 1997 to 2002, from 2002 to 2007 and from 2007 to 2012.

Lyu and Uścinowicz. The Commission agreed that, in view of the absence of some members, the seventh member of the Subcommission would be appointed at a later stage. The Subcommission elected Mr. Haworth as its Chairperson, and Messrs. Charles and Glumov as its Vice-Chairpersons. At the thirty-fifth session of the Commission, Mr. Ravindra was appointed as the seventh member of the Subcommission.

- 10 Following its establishment, the Subcommission met from 18 to 21 February 2014 to commence its consideration of the Submission and to conduct a preliminary examination of the Submission pursuant to paragraph 5(1) of Annex III to the Rules of Procedure. During this session, the Subcommission received a presentation of the amended Submission. It determined that, given the volume and nature of the data contained in the Submission, the Subcommission would require additional time to examine all the data. The Subcommission verified the format and completeness of the Submission and decided, *inter alia*, that the test of appurtenance was satisfied.
- 11 The Subcommission also prepared a set of procedures for the conduct of meetings with the Delegation and decided to continue its work during the thirty-fifth session.
- 12 The Subcommission continued its examination of the Submission during the following sessions: thirty-sixth, thirty-seventh, thirty-eighth, thirty-ninth, fortieth, and forty-first. During these sessions, the Subcommission held 25 meetings with the Delegation in which it posed five questions in writing, presented 30 preliminary considerations involving documents and presentations and a consolidated set of views and general conclusions covering the whole Submission, in accordance with paragraph 10.3 of Annex III to the Rules of Procedure. During the course of the examination of the Submission by the Subcommission, the Delegation provided responses to the questions posed both in writing and as presentations, and provided additional material.
- 13 The Subcommission approved its Recommendations on 4 August 2016 and submitted them to the Commission on 5 August 2016 for consideration and approval.
- 14 The Subcommission made a presentation to the Commission on the substance and rationale for its Recommendations on 18 August 2016. The Delegation subsequently made a presentation to the Commission on 19 August 2016 in accordance with paragraph 15.1 bis of Annex III to the Rules of Procedure.
- 15 The Commission prepared these Recommendations, which were approved on 17 March 2017 taking into consideration article 6 of Annex II to the Convention and the procedures outlined in the following documents of the Commission: the Rules of Procedure, and the Guidelines.
- 16 The Recommendations of the Commission are based on the scientific and technical data and other material provided by South Africa in relation to the implementation of article 76. The Recommendations of the Commission only deal with issues related to article 76 and Annex II to the Convention and shall not prejudice matters relating to delimitation of boundaries between States with opposite or adjacent coasts, or application of other parts of the Convention or any other treaties.
- 17 The Commission makes these Recommendations to coastal States on matters related to the establishment of the outer limits of their continental shelf in

accordance with paragraph 8 of article 76 of the Convention. Pursuant to this paragraph, the limits of the shelf established by a coastal State on the basis of these Recommendations shall be final and binding.

- 18 Throughout the examination of the Submission, the Subcommission requested and received support from the Division for Ocean Affairs and the Law of the Sea, Office of Legal Affairs.

II. CONTENTS OF THE SUBMISSION

A. The Submission

- 19 The original partial Submission received on 5 May 2009 contained three parts: an Executive Summary; a Main Body which is the analytical and descriptive part; and Scientific and Technical Data. An amendment to the partial Submission, received on 19 November 2013, comprised a Main Body and an Executive Summary, together with appendices and supplemental data.

B. Communications and additional material

- 20 In the course of the examination of the Submission by the Subcommission, the Delegation submitted additional material, including in response to questions, requests for clarification and written preliminary considerations of the Subcommission.

III. EXAMINATION OF THE SUBMISSION BY THE SUBCOMMISSION

A. Examination of the format and completeness of the Submission

- 21 Pursuant to paragraph 3 of Annex III to the Rules of Procedure, the Subcommission examined and verified the format and completeness of the Submission.

B. Preliminary analysis of the Submission

- 22 Pursuant to paragraph 5 of Annex III to the Rules of Procedure, the Subcommission undertook a preliminary analysis of the Submission, in accordance with article 76 of the Convention and the Guidelines and determined that:

- (i) the outer edge of the continental margin, established from the FOS by applying the provisions of paragraph 4 of article 76 of the Convention, extends beyond the 200 M limits of South Africa. On this basis, the Subcommission recognized the entitlement of South Africa to delineate the outer limits of its continental shelf beyond its 200 M limit (Figure 1) (i.e. the test of appurtenance was satisfied by South Africa);
- (ii) the proposed outer limits of South Africa's continental shelf beyond 200 M consist of 60 M formula points and the applicable distance and depth constraints;
- (iii) the construction of the outer limits of the continental shelf contains straight line segments not longer than 60 M;
- (iv) the advice of any other member of the Commission and/or a specialist in accordance with rule 57 of the Rules of Procedure, or the cooperation of relevant international organizations, in accordance with rule 56, would not be sought; and

- (v) additional time would be required to review all data and to prepare the Recommendations during future sessions of the Commission.

C. Main scientific and technical examination of the Submission

- 23 Pursuant to paragraph 9 (section IV) of Annex III to the Rules of Procedure, the Subcommission conducted an examination of the Submission based on the Guidelines and evaluated the following, as applicable:
- (i) the data and methodology employed by the coastal State to determine the location of the foot of the continental slope;
 - (ii) the methodology used to determine the formula line at a distance of 60 M from the foot of the continental slope;
 - (iii) the data and methodology employed in the determination of the 2,500 metre isobath;
 - (iv) the methodology used to determine the constraint line at a distance of 100 M from the 2,500 metre isobath;
 - (v) the data and methodology used to determine the constraint line at a distance of 350 M from the baselines;
 - (vi) the construction of the formula line as the outer envelope of the two formulae;
 - (vii) the construction of the constraint line as the outer envelope of the two constraints;

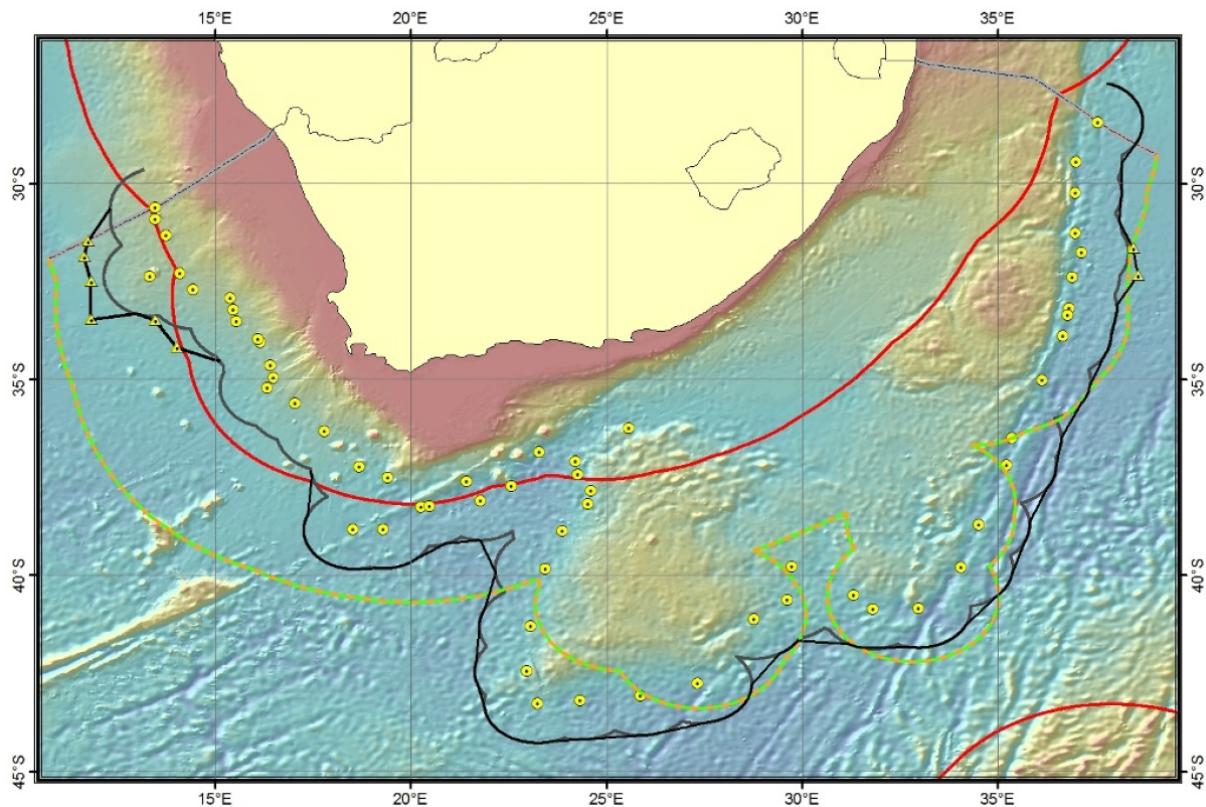

Figure 1. Originally proposed outer limit of the continental margin (heavy black line) as determined by the combination of the sediment thickness points (yellow triangles) and the FOS points (yellow circles) + 60M (grey line). Also shown is the combined 350M and 2500m+100M constraint line (dashed green-orange line) (Figure 9.1 from the Main Body)

- (viii) the construction of the inner envelope of the formula and constraint lines;
 - (ix) the delineation of the outer limit of the continental shelf by means of straight lines not longer than 60 m with a view to ensuring that only the portion of the seabed that satisfies all the provisions of article 76 of the Convention and the Statement of Understanding is enclosed;
 - (x) the estimates of the uncertainties in the methods applied, with a view to identifying the main source(s) of such uncertainties and their effect on the Submission; and
 - (xi) whether the data submitted are sufficient in terms of quantity and quality to justify the proposed limits.
- 24 In conducting its examination of the Submission, the Subcommission:
- (i) conducted a detailed examination of the data and information supporting every FOS point selected for the establishment of the outer edge of the continental margin;
 - (ii) sought clarifications and additional data from the Delegation, where necessary, by dialogue between the Delegation and the Subcommission;

- (iii) presented preliminary views and conclusions on all regions to the Delegation; and
- (iv) made a comprehensive presentation of the views and general conclusions of the Subcommission to the Delegation, at an advanced stage of the examination of the Submission as provided for in paragraph 10.3 of Annex III to the Rules of Procedure.

IV. RECOMMENDATIONS OF THE COMMISSION WITH RESPECT TO THE AREA OF THE SOUTH AFRICAN MAINLAND

1. Geographical and Geological description of the region

- 25 The continental margin of the South African Mainland can be divided into three regions: The West Coast (the Atlantic Continental Margin); The Mozambique Ridge and; The Agulhas Plateau and Environs (Figure 2). The following are primarily the views of the State as summarized in the Submission.
- 26 The West Coast (the Atlantic Continental Margin): The Atlantic Continental Margin of South Africa represents part of a passive continental margin that extends from Namibia to the Agulhas Fracture Zone. It is strongly influenced by the Orange Delta sediment build-up that “extends some 350 km from the shelf break. The shelf has a depth of typically 100-200m and the shelf break occurs at approximately 400m” (Main Body p. 2-3). The Basin developed within a divergent plate boundary setting, in response to the break-up of South America and Africa in the Late Jurassic, followed by seafloor spreading and the opening of the South Atlantic Ocean in the early Cretaceous around 136 Ma (Macdonald et al., 2003) and received the majority of sediments from drainage of the interior of southern Africa from late Mesozoic to present day.

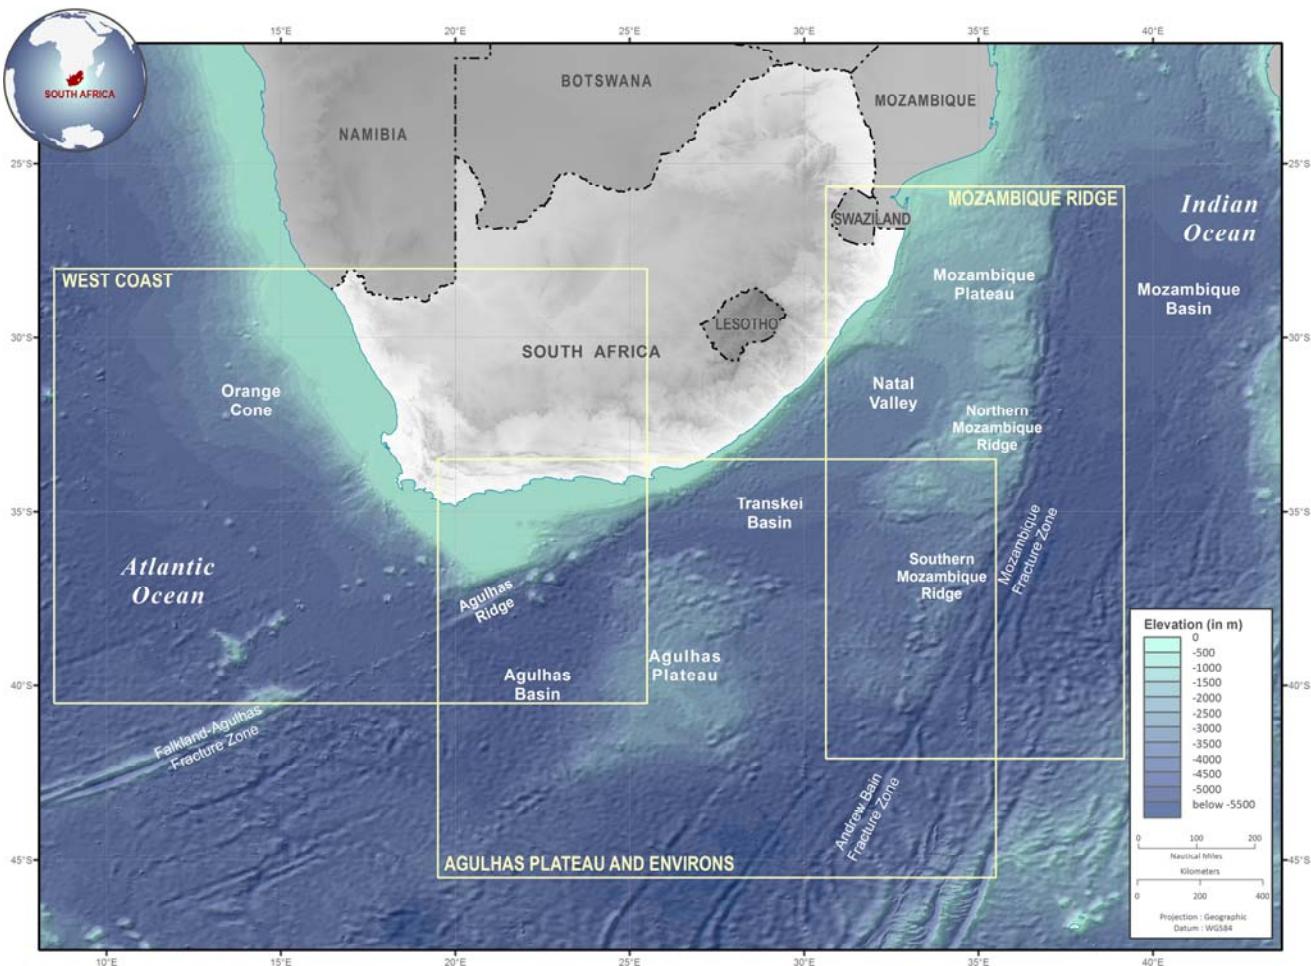

Figure 2*. Locality map covering the area included in the partial submission of South Africa for the area of the South African Mainland. (Note: Outer limits of the continental shelf are recommended for portions of two of the areas outlined: West Coast and Mozambique Ridge. For the remaining portions of those areas and for Agulhas Plateau and Environs, the Subcommission recommends that South Africa investigate whether additional bathymetric and geophysical information might support a revised submission for the determination of the outer limits of the continental shelf beyond 200 nautical miles.)

* The illustrative maps marked by an asterisk are prepared by the Division for Ocean Affairs and the Law of the Sea, Office of Legal Affairs, United Nations, upon the request of the Subcommission established to consider the Submission made by the Republic of South Africa in respect of the South African mainland on the basis of the submitted information. The designation employed and the presentation of material on these maps does not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

- 27 The Orange Cone, in comparison, “refers to a morphological expression of the sediment buildout and modification of the continental margin” lying within the larger Orange Basin (Main Body Amendment p. 12). The Orange Cone post-rift sediment deposition developed in two distinct phases (Butler and Paton, 2010), with multiple reactivation of tectonics (Serrane and Anka, 2005; Lavier et al., 2001), debris flows, gravitational slope failures, slumps etc. that extend all the way to the toe of the Orange Cone and exhibit small scale features such as extensional faulting, channel scouring and erosive surfaces (Main Body Amendment p.13-17).
- 28 The Agulhas Ridge, located at the eastern margin of the Agulhas Fracture Zone, is approximately 30 km wide ridge and extends in a south-westerly direction for about 400km from the Atlantic continental margin of South Africa.
- 29 The Mozambique Ridge: The Mozambique Ridge is a “complex submarine elevation that forms part of a larger prolongation of the South African continental margin that extends southwards” from the Mozambique Plateau. The southern edge of this Plateau “is characterised by steep escarpments which define the contact with the Natal Valley to the South” (Main Body p 2-6).
- 30 The northern Mozambique Ridge “extends “southwards for some 1100 km from ~29°S to 35°S … [and] is bounded to the east by a steep escarpment, controlled by the Mozambique Fracture Zone” (Main Body p 2-7). The northern Mozambique Ridge has been recognized as comprising several geomorphic components (Leinweber and Jokat, 2012), i.e. Robert-Giraud Plateau, Rennell Plateau, Vauban Plateau, Galathea Plateau, Dana Plateau and Ariel Graben. (Figure 3). The oceanic spreading started around 166 Ma and different components of the northern Mozambique Ridge were formed during different stages. For example, the Dana and Galathea Plateau were emplaced by 141 Ma, the Vauban Plateau was emplaced by 124 Ma, Robert-Giraud and Rennell Plateau formed at southern end of northern Mozambique Ridge while southern Mozambique Ridge and Agulhas plateau were emplaced during 120-100 Ma.
- 31 The western flank of the northern Mozambique Ridge shows lower gradients than the eastern edge. The western margin of the South Mozambique Ridge is not clearly defined, subparallel to which is a series of sea mounts aligned in N-S direction.
- 32 The southern Mozambique Ridge (lying between 35°S and 41°S) is considerably narrower in width, with a steeper eastern margin than the northern Mozambique Ridge and greater depth to seafloor. It extends for another “650 km southwards with water depths varying from 4000m to 5000m”, and has been considered as “a tectonic ridge associated with the northern part of the Du Toit and Andrew Bain Fracture Zones” (Main Body p. 2-8).
- 33 The Main Body (p. 2-12) contended that the Mozambique Ridge is connected to the Agulhas Plateau despite “a lack of data and published information”. However, papers published subsequent to the Submission (Parsiegla et al., 2009; Gohl et al., 2011) have been cited by the Delegation in support of the proposed connection between the Agulhas Plateau and the Mozambique Ridge as part of a Large Igneous Province.
- 34 The Agulhas Plateau and Environs: “The Agulhas Plateau is an area of elevated seafloor located south of the African continent lying 2000-4000m above the

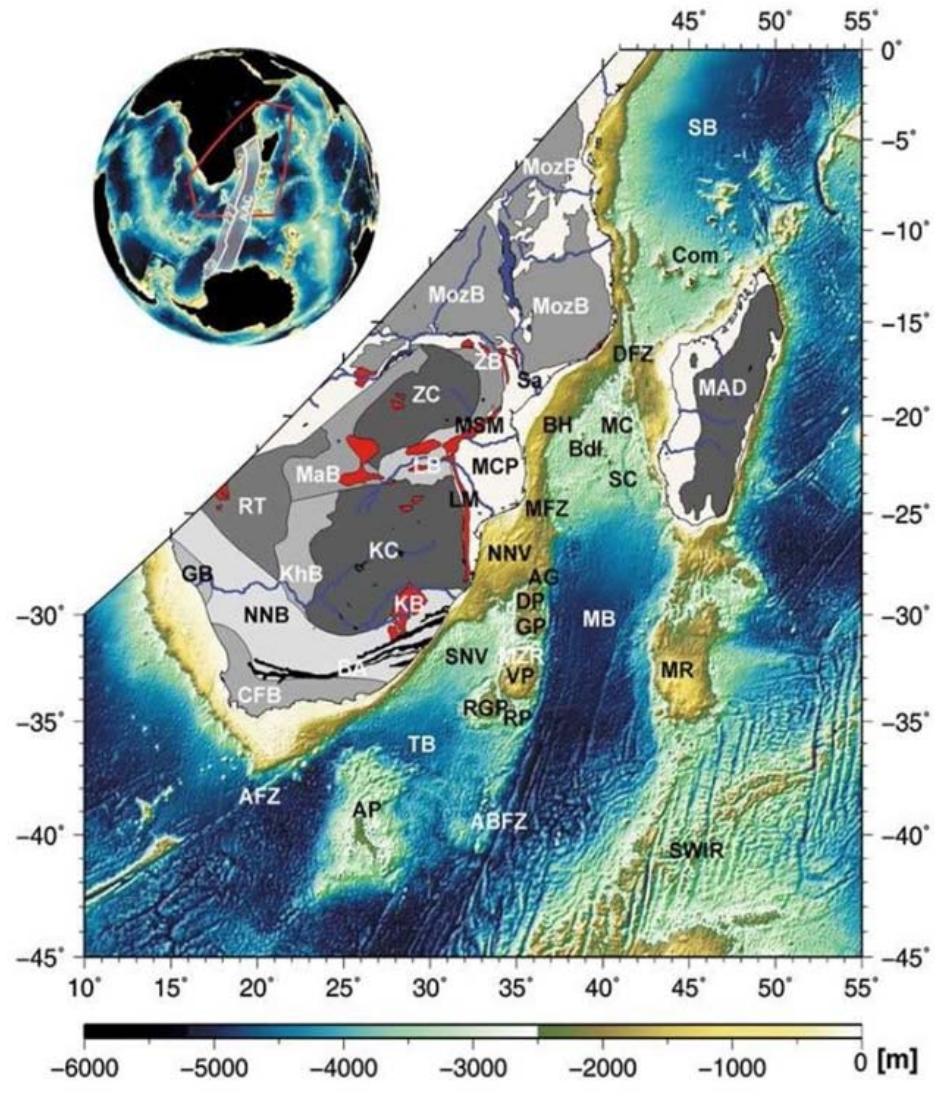

Figure 3. Geographic setting of the African Side of the Africa-Antarctica-Corridor and adjacent territories (after Leinweber and Jokat, 2012). The small globe shows the position of the region and the Africa–Antarctica-Corridor. The stripe with question tags marks a zone that is in question to directly constrain the movements between Africa and Antarctica, too. Abbreviations are: ABFZ: Andrew Bain Fracture Zone; AFZ: Agulhas Fracture Zone; AG: Ariel Graben; AGP: Agulhas Plateau; BA: Beattie Magnetic Anomaly; BH: Beira High; CFB: Cape Fold Belt; Com: Comores; DFZ: Davie Fracture Zone; DP: Dana Plateau; GB: Gariep Belt; GP: Galathea Plateau; KB: Karoo Basalts; KC: Kaapvaal Craton; KhB: Kheiss Belt; LB: Limpopo Belt; LM: Lebombo Monocline; MaB: Magondi Belt; MAD: Madagascar; MB: Mozambique Basin; MC: Mozambique Channel; MCP: Mozambique Coastal Plains; MFZ: Mozambique Fracture Zone; MozB: Mozambique Belt; MR: Madagascar Ridge; MSM: Mateke-Sabi-Monocline; MZR: Mozambique Ridge; NNB: Namaqua–Natal Belt; NNV: Northern Natal Valley; RC: Rhodesian Craton; RGP: Robert-Giraud-Plateau; RP: Rennell Plateau; RT: Rehoboth Triangle; Sa: Sambesi; SB: Somali Basin; SC: Sambesi Canyon; SNV: Southern Natal Valley; SWIR: South-West Indian Ridge; TB: Transkei Basin; VP: Vauban Plateau; ZB: Zambezi Belt.

adjacent deep ocean floor "... at its shallowest depth it is less than 1000m below sea level" (Main Body p. 2-8). From seismic reflection and refraction data, Tucholke et al., 1981, note that nearly one third of the acoustic basement beneath this aseismic structural high in the north has rugged morphology as compared to the anomalously smooth basement in the south, excepting a 30 to 90 km wide zone. The latter overlies thickened oceanic crust, while continental crust, locally thinned and intruded by basalts, underlies several regions of smooth acoustic basement. However, Gohl et al., 2001, argued for an oceanic origin of the Agulhas Plateau, similar to that inferred for the Northern Kerguelen and Ontong - Java plateaus.

- 35 South Africa maintains that the Agulhas Plateau "is connected to the Southern Mozambique Ridge by a broad, low relief saddle region that lies approximately 1300m above the deep ocean floor [and] is separated from the closely adjacent Agulhas bank on the southern margin of South Africa by the deep water Agulhas Passage" (Main Body p. 2.8 – 2.9).
- 36 "The Agulhas Passage is less than 70km in width and reaches depths of nearly 5000m" (Main Body p. 2-5). The passage leads northeastwards to the Transkei Basin and Natal Valley (Figure 3) and constrains bottom water exchange between the southeast Atlantic and southwest Indian Ocean (Tucholke and Carpenter, 1977; Uenzelmann-Neben et al., 2007).
- 37 The Transkei Basin, which lies at the north eastern end of Agulhas Passage and north of Agulhas Plateau is more than 5,000m deep in its central parts. It is enclosed by South African Margin and Natal Valley to the northwest and northeast respectively, and by Mozambique Ridge to the east and south. The sedimentation in this basin has been influenced by both North Atlantic Deep Water (NADW) and Antarctic Bottom Water (AABW). The area of the Mozambique Ridge that constrains the Transkei Basin on the east has sometimes been referred to as the Transkei Rise by the Delegation. Northwards the Transkei Basin becomes gradually shallower and merges with the Natal Valley.

2. Considerations

- 38 Following appointment of the Subcommission, the delegation made an overview presentation to the Subcommission (2014_08_12_ZAF_PRE_SC_001). At that same session, the Subcommission introduced its doubts about their being morphological continuity between the Agulhas Plateau and the Mozambique Ridge. These concerns were based on bathymetric profiles it constructed across and along the "saddle" which the Delegation proposed as connecting the two (2014_08_13_SC_PRE_ZAF_001). The Delegation subsequently challenged the Subcommission's analysis, claiming a common geological history of the two areas through excessive volcanism associated with the passage of a Hot Spot and referred to the proposed entity as the Mozambique Ridge Agulhas Plateau Complex (MRAPC) (2014_08_13_ZAF_PRE_SC_002).
- 39 In order to focus its concerns, the Subcommission posed a series of questions to the Delegation on: continuity between Mozambique Ridge and Agulhas Plateau; geological evolution south and south east of South Africa (both in 2014_08_13_SC_DOC_ZAF_ 001); significance and nature of the Transkei Basin; bathymetric data to check FOS analyses (both in

- 2014_08_15_SC_DOC_ZAF_003); and the Western FOS point location at the toe of the Orange Cone (2014_09_05_SC_DOC_ZAF_004) (see Annex IV A).
- 40 Answers to the first three questions were the focus of presentations by the Delegation in November 2014 (2014_11_18_ZAF_PRE_SC_003) and February 2015 (2015_02_24_ZAF_PRE_SC_004). In the latter presentation, the Delegation introduced additional geological and geophysical data in support of continuity between the Agulhas Plateau and the Mozambique Ridge, including the nature of the Transkei Basin and what the Delegation identified as general characteristics of “saddles” that they deemed acceptable to the Commission based on their analysis of previous recommendations.
- 41 Discussion extended to include identification of the foot of the continental slope on the West Coast, and in particular the Orange Cone, in February 2015 (2015_02_25_SC_PRE_ZAF_004) while the Subcommission and the Delegation continued to debate the relation between the Agulhas Plateau and the Mozambique Ridge.
- 42 By August 2015 (2015_08_13_ZAF_PRE_SC_007), the Delegation believed that it had presented enough evidence to demonstrate continuity between the Agulhas Plateau and the Mozambique Ridge, while the Subcommission believed that continuity on morphological grounds was not proven from the bathymetric and geophysical data available and therefore could not accept the FOS envelope proposed in the submission.
- 43 The delegation informed the Subcommission that it was considering the collection of additional data to support its contention of a morphological connection between Agulhas Plateau and Mozambique Ridge and requested the Subcommission not to make recommendations for that area in the meantime (2015_09_02_SC_LET_ZAF_009; 2016_02_22_RSA-DOC-05) to which the Subcommission agreed.
- 44 The Subcommission therefore limited its further considerations to two separate areas: (1) the West Coast, and (2) the Mozambique Ridge Margin.

A. THE WEST COAST:

1. **The determination of the foot of the continental slope (paragraph 4(b) of article 76)**
- 45 The FOS should be established in accordance with paragraph 4(b) of article 76 of the Convention
- 1.1 Considerations**
- 46 In the amendment to its original submission, South Africa noted that since its original Submission, the Commission had, in several of its recommendations, endorsed the use of more seaward FOS points where evidence of slope failure could be demonstrated. In particular South Africa noted that the morphology of the Orange Cone has been defined by a protracted history of fan slope buildout and subsequent failure transporting a significant volume of material downslope (Main Body Amendment, p. 1-2). With the availability of new and improved data, South Africa determined a new foot of the continental slope position on the basis of which it modified the fixed points delineating the outer limits of the continental shelf.

- 47 The Subcommission prepared a series of illustrations depicting the morphological expression of the Orange Cone using global topographic models similar to that prepared by the Delegation (Figure 4) but found it difficult to find individual profiles that clearly identified the seaward limit of the “foot of the cone”. The Delegation presented profiles that it believed did so, but the Subcommission had difficulty in recognizing a clear break in slope at the “foot of the cone”, since the changes in gradient at those points were too low to be indicative of the continental slope.

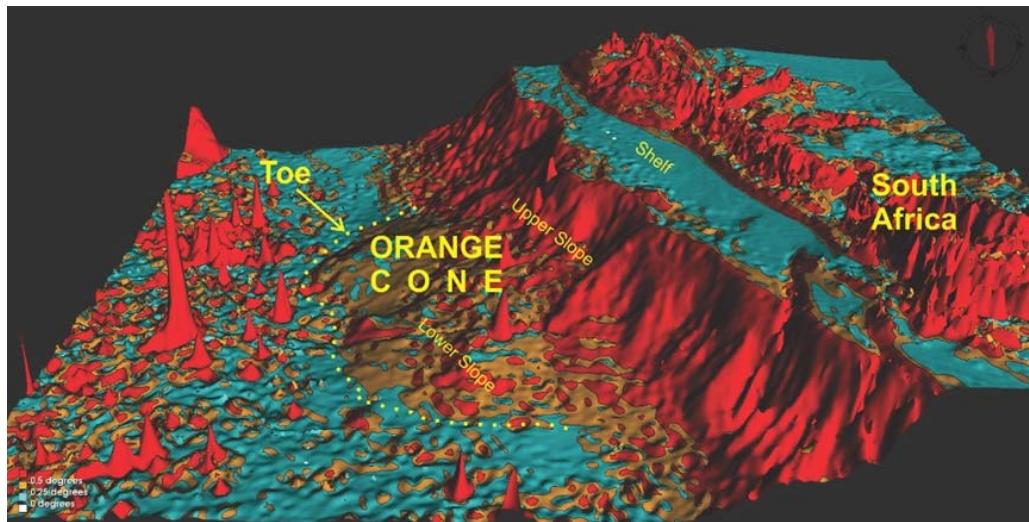

Figure 4. Morphology of the Orange Cone as proposed by South Africa (Figure 3.15, p.29 of the Main Body Amendment)

- 48 For the Orange Cone, following a series of interaction based on responses and additional information, the Delegation offered an alternative location for the most seaward FOS point at the “foot of the cone”, which the Subcommission accepted, together with several of the other FOS points on the West Coast and the Agulhas Ridge. After further interaction, which resulted in minor adjustments to some of their locations the Subcommission agreed with the way in which the location of the following FOS points were established for the entire western margin: RevSA02, RevSA03, RevSA04alt, RevSA06, RevSA07, RevSA09, RevSA10, RevSA11, SA15, SA16alt, SA18, SA19alt, SA20S, SA22, SA24, SA25, and SA26. These FOS points were used to calculate the FOS+60M formula line (Figure 5).
- 49 10 FOS points generate formula points beyond the 200 M limits of South Africa for the West Coast of the South African Mainland: RevSA02, RevSA03, RevSA04alt, RevSA06, RevSA07, SA19alt, SA20S, SA22, SA25, and SA26 (Figure 5)
- 50 In this region, the base of the continental slope can be readily identified on a morphological basis. Accordingly, the margin of the West Coast of South Africa may be readily delineated by its foot of the continental slope envelope. The Subcommission agreed with the general foot of the continental slope envelope established by South Africa in this region; in particular, it agreed with the

locations of the FOS points as submitted or amended during their consideration by the Subcommission (see paragraph 49).

- 51 Upon consideration of the draft recommendations submitted by the Subcommission, a considerable number of members of the Commission were in support of the location of the base and the foot of the continental slope as recommended by the Subcommission in the region of the Orange Cone, namely FOS points RevSA02, RevSA03, RevSA04alt, RevSA06, and RevSA07, while other members disagreed.
- 52 The Commission acknowledges the geological and geophysical data and information provided by South Africa in order to support FOS points RevSA02, RevSA03, RevSA04alt, RevSA06, and RevSA07. Such information identified the “foot of the cone” as the general location of the base and the foot of the continental slope in the Submission. However, the Commission was in doubt in respect to the validity of the arguments presented to use the full extent of the cone as the continental slope, and thereby, effectively, making the “foot of the cone” equivalent to the base and the foot of the continental slope. Furthermore, the presence of mass transport deposits and other deposits of downslope sedimentary processes is not necessarily restricted to the continental slope, but in some cases can also extend to the continental rise and beyond.
- 53 Considering all data and information provided and views expressed in paragraph 52 above, the Commission reached the consensus view that a clear differentiation between continental slope and continental rise based on morphological, geological and geophysical data and information must be established in order to determine the base of the continental slope in the region of the cone and substantiate the FOS points in that area.

1.2 Recommendations

- 54 Based on its consideration of the technical and scientific documentation contained in the Partial Submission of South Africa and the additional information provided in documents referred to in paragraph 47 above, the Commission concludes that, for the West Coast of the South African mainland, the FOS points listed in Table 1 of Annex I (submitted on 28 July 2016): , RevSA09, RevSA10, RevSA11, SA15, SA16alt, SA18, SA19alt, SA20S, SA22, SA24, SA25, and SA26, fulfill the requirements of article 76 and Chapter 5 of the Guidelines. The Commission recommends that these FOS points should form the basis for the establishment of the outer edge of the continental margin on the West Coast of the South African Mainland.

2. The establishment of the outer edge of the continental margin (paragraph 4(a) of article 76)

- 55 The outer edge of the continental margin of South Africa in the West Coast of the South African mainland should, for the purposes of the Convention, be established in accordance with paragraph 4(a) of article 76 of the Convention.

2.1 The application of the 60 M distance formula (paragraph 4(a)(ii) of article 76)

- 56 On the West Coast of the South African mainland, the outer edge of the continental margin is based on fixed points constructed at a distance of not more than 60 M from FOS points on the continental margin of the West Coast of the South African mainland, in accordance with the provision contained in paragraph 4(a)(ii) of article 76 of the Convention (Figure 5).

- 57 The entire outer edge of the continental margin established in the West Coast of the South African mainland is based on fixed points derived using the 60 M distance formula utilising FOS points on the continental margin of the West Coast of the South African mainland listed in Table 1 of Annex I and in paragraph 54 above.
- 58 The Commission agrees with the procedure and its accuracy by which these points have been established by South Africa for the West Coast of the South African mainland (from Table 2, Annex I as submitted on 25 July 2016).

2.2 The application of the 1% sediment thickness formula (paragraph 4(a)(i) of article 76)

- 59 In the Amendment to its Partial Submission (19 November 2013), South Africa did not submit any fixed points for the West Coast of the South African Mainland based on the sediment thickness provision of paragraph 4(a)(i) of article 76 of the Convention.

2.3 Configuration of the Outer Edge of the Continental Margin

- 60 For the West Coast of the South African Mainland, the outer edge of the continental margin extends northwestwards from a point on the Agulhas Ridge for approximately 1,000 km (Figure 5). FOS points have been recommended by the Commission for 700 km of this margin.

2.4 Recommendations

- 61 For the West Coast of the South African mainland, the outer edge of the continental margin beyond 200 M is based on points on the 60 M formula arcs as described in section 2.1 in accordance with paragraph 7 of article 76 of the Convention (Figure 5). The Commission recommends that those arcs generated from points RevSA09, RevSA10, RevSA11, SA15, SA16alt, SA18, SA19alt, SA20S, SA22, SA24, SA25, and SA26 be used as the basis for delineating the outer limits of the continental shelf in this region.

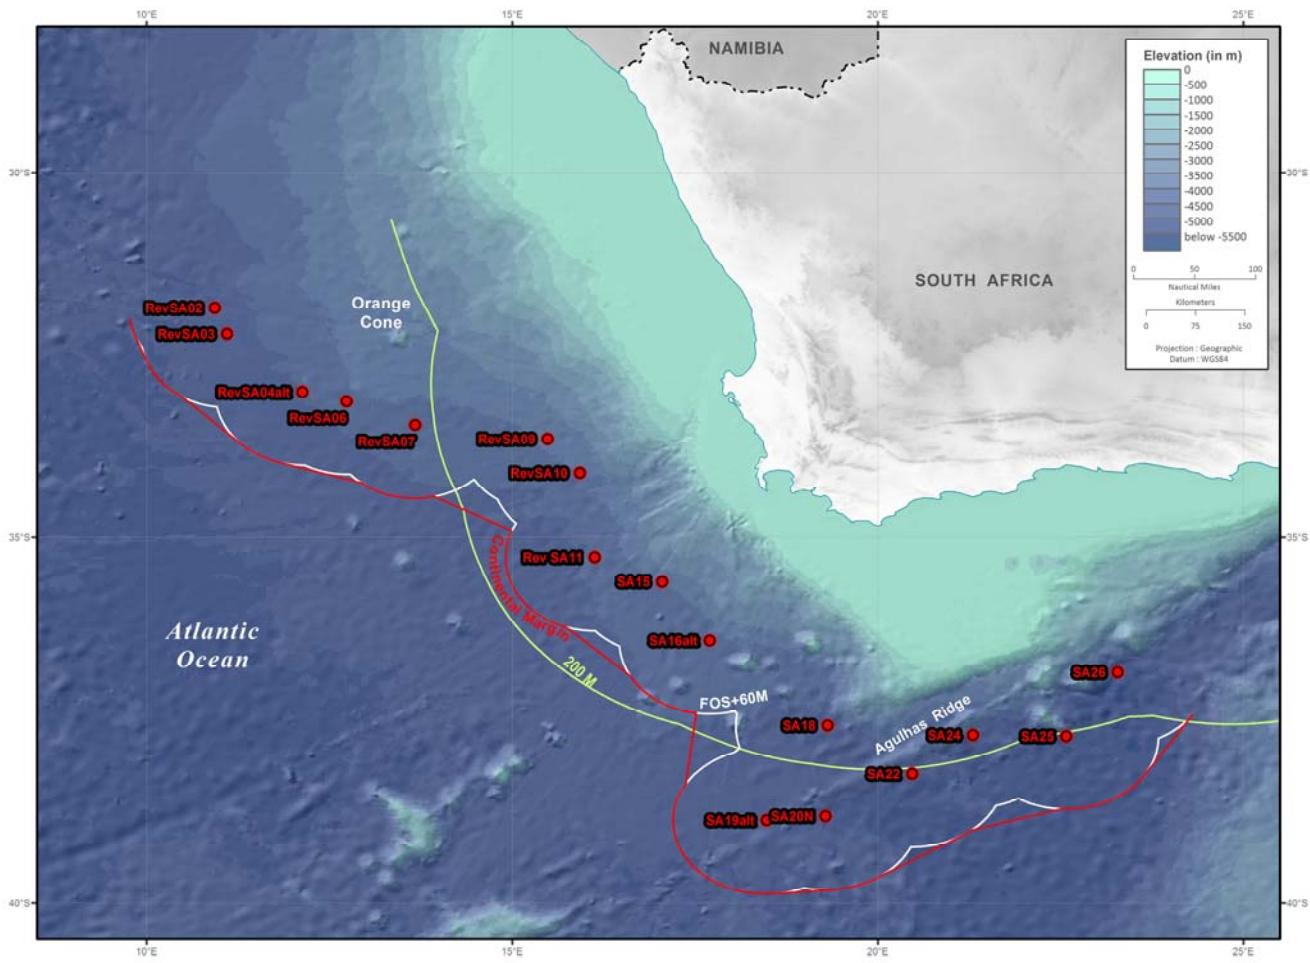

Figure 5*. Outer limit of the continental margin on the West Coast of the Submission. The outer limit of the continental margin in the areas of the Orange Cone (North) and Agulhas Ridge (South) (red line), the FOS points as agreed between the Delegation and Subcommission (red points), FOS+60M formula line (white line) and the 200M limit (light green line). The Commission found insufficient evidence to approve points RevSA02, RevSA03, RevSA04Alt, RevSA06 and RevSA07.

3. The application of the constraint criteria (paragraphs 5 & 6 of article 76)

- 62 The fixed points comprising the line of the outer limits of the continental shelf shall be based on the outer edge of the continental margin as described in section 2.1, taking into consideration the constraints contained in paragraphs 5 and 6 of article 76 of the Convention.
- 63 The outer limits of the continental shelf cannot extend beyond the constraints as per the provisions contained in paragraphs 5 and 6 of article 76 of the Convention. The fixed points comprising the line of the outer limits of the continental shelf on the seabed, drawn in accordance with paragraph 4(a)(i) and (ii), either shall not exceed 350 M from the baselines from which the breadth of the territorial sea is measured, or shall not exceed 100 M from the 2,500 metre

isobath for those parts of the continental margin that are classified as natural components of that margin.

- 64 For the West Coast of the Mainland of South Africa, consideration of the outer limits of the continental shelf only involves an examination of the construction of the distance constraint line. In the view of the Commission, the application of the depth constraint involves the examination of whether the relevant seafloor highs in the West Coast of the Mainland of South Africa may be considered natural components of the continental margin.

3.1 The construction of the distance constraint line

- 65 The distance constraint line submitted by South Africa is constructed by arcs at 350 M distance from the baselines (Figure 6). The Commission agrees with the procedure and its accuracy applied by South Africa in the construction of this constraint line.

3.2 The construction of the depth constraint line

- 66 Although the depth constraint would be an applicable constraint for the West Coast of the South African Mainland, the Subcommission verified that the depth constraint of 100M seaward of the 2500m isobath on the West Coast lies everywhere inboard of the 350 M distance constraint line. It is therefore irrelevant as a constraint to the limits of the continental shelf for the West Coast of the South African Mainland.

3.3 The construction of the combined constraints line

- 67 In the West Coast of Mainland South Africa, South Africa has applied a constraint line based on the line constructed by the application of the distance constraint contained in paragraph 5 of article 76 of the Convention (see section 3.1).

4. The outer limits of the continental shelf (paragraph 7 of article 76)

- 68 The Commission recommends that the delineation of the outer limits of the continental shelf on the West Coast of the South African mainland be conducted in accordance with paragraph 7 of article 76 of the Convention by straight lines not exceeding 60 M in length, connecting fixed points, defined by coordinates of latitude and longitude. Further, the Commission agrees with the procedure and its accuracy applied in delineating the outer limits of the continental shelf in the West Coast of the South African mainland, including the determination of the fixed points, namely RSA_WC_OLCS_002 to RSA_WC_OLCS_315, listed in Table 3, Annex I as submitted on 4 August 2016.
- 69 The outer limits of the continental shelf result from the application of the combined constraints line determined according to paragraph 65, above. For the West Coast of mainland South Africa as contained in the partial Submission of South Africa dated 5 May 2009 and its amendment of 19 November 2013, South Africa connected points on the outer limits of the continental shelf beyond the 200 M to points on the 200 M line with segments not more than 60 M in length (between points RSA_SC_OLCS_001 and RSA_SC_OLCS_002) (Figure 6). The Commission, however, recommends that the segments proposed by South Africa connecting RSA_SC_OLCS_001 with RSA_SC_OLCS_002 be replaced by points and lines not exceeding 60M in length that conform to the outer edge of the continental margin (Figure 7).

70 At its southern end, the delegation has proposed to limit its definition of the limit of the continental shelf at point RSA_SA OLCS_315. This has been done by South Africa to take into account the potential consequences to the limits of the continental shelf of South Africa of the collection of additional data in the Agulhas Plateau and Environs region as recommended to South Africa by the Commission.

5. Recommendations for West Coast of the South African Mainland (paragraph 8 of article 76)

- 71 With the exception described in paragraph 68 and subject to the caveat expressed in paragraph 69, the Commission agrees with the principles applied in establishing the outer limits of the continental shelf for the West Coast region, including the determination of the fixed formula points RSA_WC_OLCS_002 to RSA_WC_OLCS_315 listed in Table 3, Annex I, and the construction of the straight lines connecting those points (Figure 7). The Commission recommends that South Africa proceeds to establish the outer limits of the continental shelf in the West Coast region accordingly.
- 72 Furthermore the Commission recommends that South Africa submits additional scientific and technical data and information in support of those points that the Commission was unable to support in these recommendations.

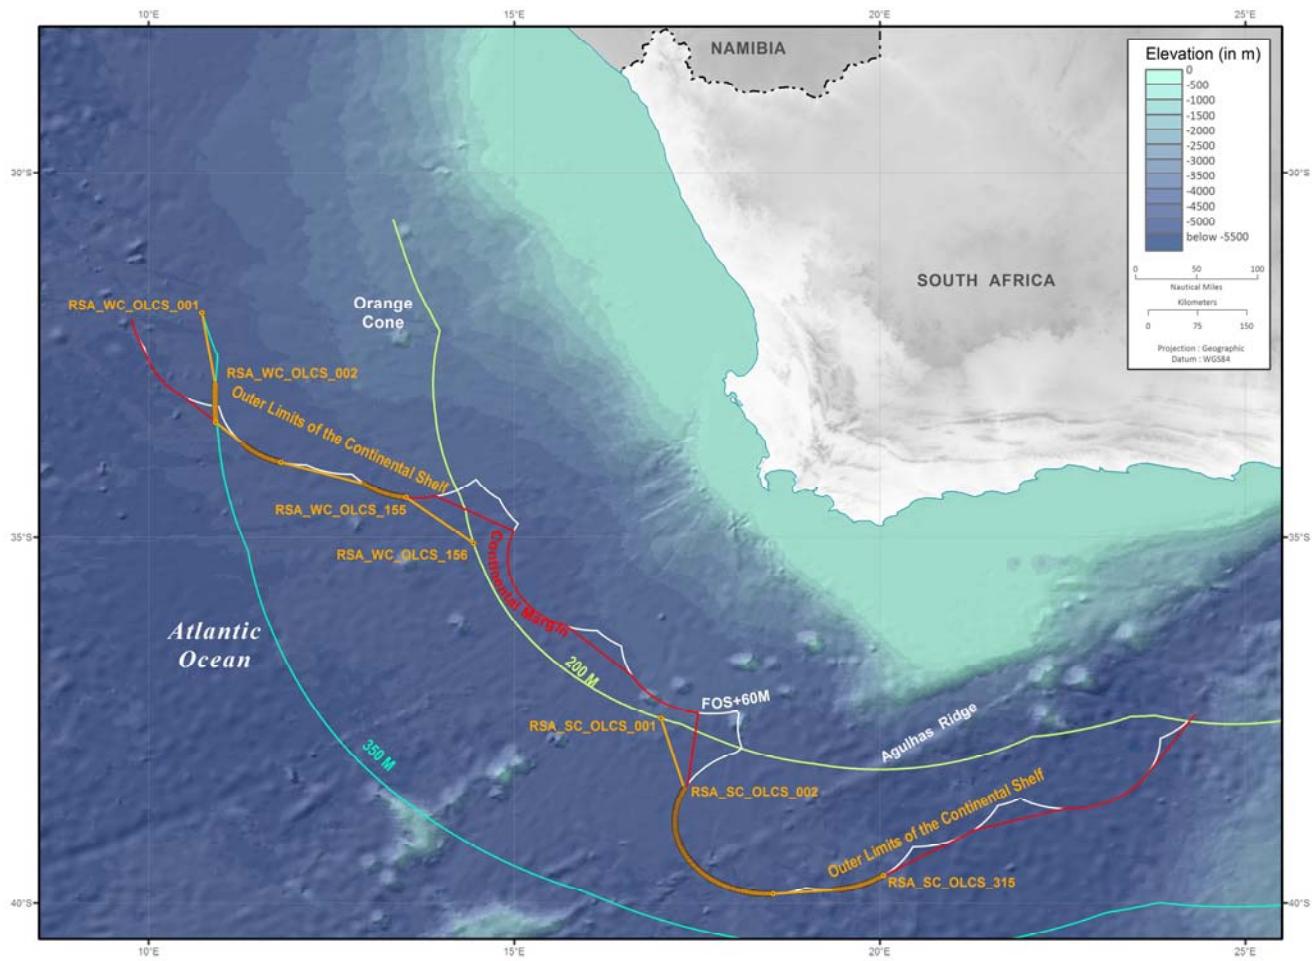

Figure 6*. Outer limit of the continental shelf on the West Coast of the Submission. The outer limit of the continental shelf in the areas of the Orange Cone (North) and Agulhas Ridge (South) (orange line) as proposed by the State

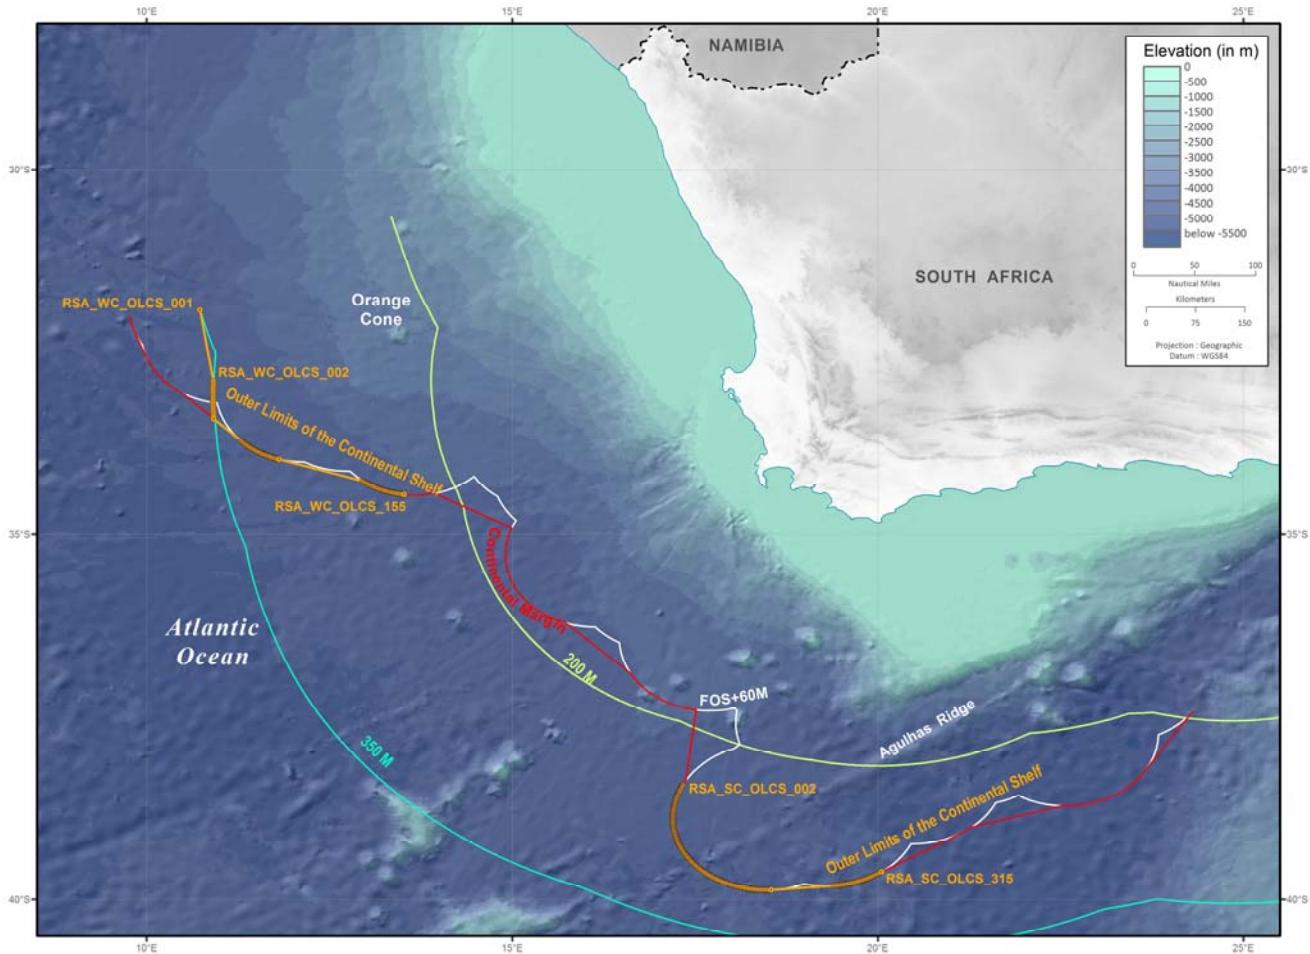

Figure 7*. Outer limit of the continental shelf on the West Coast of the Submission. The outer limit of the continental shelf in the areas of the Orange Cone (North) and Agulhas Ridge (South) (orange line) as recommended by the Subcommission. The Commission approved points RSA_SC_OLC_002 to RSA_SC_OLC_315 but recommends that point RSA_SC_OLC_002 be connected to the 200M limit by points and lines not exceeding 60M in length that conform to the outer edge of the continental margin

B. THE MOZAMBIQUE RIDGE:

1. The determination of the foot of the continental slope (paragraph 4(b) of article 76)

73 The FOS should be established in accordance with paragraph 4(b) of article 76 of the Convention.

1.1 Considerations

74 As noted in paragraphs 30 to 34, the Mozambique Ridge is connected to the Continental Margin of South Africa through the Mozambique Plateau. The

Northern Mozambique Ridge extends “southwards... from 29°S to 35°S and is bounded to the east by a steep escarpment, controlled by Mozambique Fracture Zone” (Main Body p 2-7).

- 75 The Subcommission considered FOS points proposed by the Delegation for the eastern edge of the Mozambique Ridge. The Delegation contended that the foot of the slope was not immediately adjacent to the steep edge of the Northern Mozambique Ridge but was seaward of what it called a “spur”, often indicated by a minor bathymetric high, parallel to that eastern margin. The Subcommission was initially sceptical as to the origin of the bathymetric high other than on two seismic lines used in the Submission as the basis for application of the 1% sediment thickness criterion.
- 76 When the Delegation furnished additional seismic reflection data to the Subcommission, it was apparent that, except in two cases, the minor bathymetric highs were underlain by basement, and for the remaining two points, the FOS points were along the same trend as those on which basement had been identified. The Subcommission therefore accepted the contention of the Delegation that the basement underlying these “spurs” were fault blocks of the Mozambique Ridge. The FOS points proposed by the Delegation were established using the maximum change in gradient of the seafloor.
- 77 The Subcommission had considerable interaction with the Delegation on the continuity between the northern and southern portions of the Mozambique Ridge. The Subcommission noted that the FOS points identified by the Delegation off the Northern Mozambique Ridge were considerably shallower than those off the Southern Mozambique Ridge within the Mozambique Fracture Zone.
- 78 The Subcommission also noted that the almost vertical eastern edge of the Northern Mozambique Ridge continued westward at the southern end of the Northern Mozambique Ridge. It discussed the possibility that the BOS zone might also continue westward, thereby indicating morphological separation between the Northern Mozambique Ridge and the Southern Mozambique Ridge.
- 79 Two observations countered this possibility. Firstly, the BOS zone would have to rise over 1000m from that on the eastern edge of the Northern Mozambique Ridge. Secondly, a seismic profile along the multibeam bathymetric line to establish the 2,500m isobath for the entire Mozambique Ridge shows continuity of basement between the two sections of the Mozambique Ridge. The Subcommission therefore concluded that the BOS zone is continuous along the entire eastern margin of the Mozambique Ridge.
- 80 Based on the partial Submission, and the additional data and material provided by South Africa, the Subcommission agreed unanimously, with the approach adopted by South Africa to define the base of the continental slope associated with the Mozambique Ridge margin. In particular, based on the morphological and bathymetric evidence, supplemented by other geological and geophysical data provided by South Africa, the Subcommission agreed with the way the locations of the following FOS points were established: SA46, SA47, SA48, SA49, SA50, SA51, SA52, SA53, SA54, SA55, SA56, SA57, SA58 and SA59 (Figure 8).

- 81 All the 14 FOS points listed in paragraph 78 above generate formula points beyond the 200 M limits of South Africa on the Mozambique Ridge margin of the South African mainland.
- 82 For those FOS points recommended by the Subcommission for the northern Mozambique Ridge margin, several members of the Commission did not agree that the State had provided sufficient justification for the location of FOS point SA59 given that its location appeared inconsistent with those immediately to the south. Consequently, the Commission was unable to recommend the use of that FOS point. Some members also raised concerns with respect to the location of certain FOS points identified at the eastern edge of a “spur” located seaward of and parallel to the escarpment of the northern Mozambique Ridge. These members were of the view that the State had not provided sufficient evidence in the form of measured bathymetric data that would prove the continuity of that feature and its connection to the escarpment of the northern Mozambique Ridge, and would support a location for the BOS/FOS at the base of the escarpment, based on the maximum change in gradient. However, taking into consideration the geological and geophysical data and information provided in the Submission, the Commission decided to accept the locations of FOS points SA58 to SA51.
- 83 Some members of the Commission, having considered the scientific data and information available in conjunction with the recent scientific literature (e.g. Fischer et al. 2017), did not agree with the morphological and geological connection between the northern and southern parts of the Mozambique Ridge as submitted by the State and recommended by the Subcommission. Other members felt that while morphological continuity could be accepted, geological connection between the two parts was insufficiently demonstrated. Consequently, the Commission was unable to recommend the use of FOS points SA50 to SA46 as recommended by the Subcommission, and recommends that more data and information be presented by the State to support its contention of morphological and geological continuity between the northern and southern parts of the Mozambique Ridge.

1.2 Recommendations

- 84 Based on its consideration of the technical and scientific documentation contained in the partial Submission of South Africa and the additional information provided in documents referred to in paragraph 76 above, the Commission concludes that, for the Mozambique Ridge margin, the FOS points listed in Table 1 of Annex I and in paragraph 82 above, fulfill the requirements of article 76 and Chapter 5 of the Guidelines. The Commission recommends that these FOS points should form the basis for the establishment of the outer edge of the continental margin for the Mozambique Ridge margin.

2. The establishment of the outer edge of the continental margin (paragraph 4(a) of article 76)

- 85 The outer edge of the continental margin of South Africa for the Mozambique Ridge margin of the South African mainland should, for the purposes of the Convention, be established in accordance with paragraph 4(a) of article 76 of the Convention.

2.1 The application of the 60 M distance formula (paragraph 4(a)(ii) of article 76)

- 86 For the Mozambique Ridge margin, the outer edge of the continental margin is based on fixed points constructed at a distance of not more than 60 M from FOS points on the continental margin east of the Mozambique Ridge, in accordance with the provision contained in paragraph 4(a)(ii) of article 76 of the Convention.
- 87 The outer edge of the continental margin established east of the Mozambique Ridge is based on fixed points derived using the 60 M distance formula utilising FOS points on the continental margin east of the Mozambique Ridge (Table 4, Annex I, as submitted on 25 July 2016). The approved FOS points are: SA51, SA52, SA53, SA54, SA55, SA56, SA57 and SA58 (Figure 8; Table 1, Annex I). The Commission agrees with the procedure and its accuracy by which these points have been established by South Africa for the Mozambique Ridge margin.

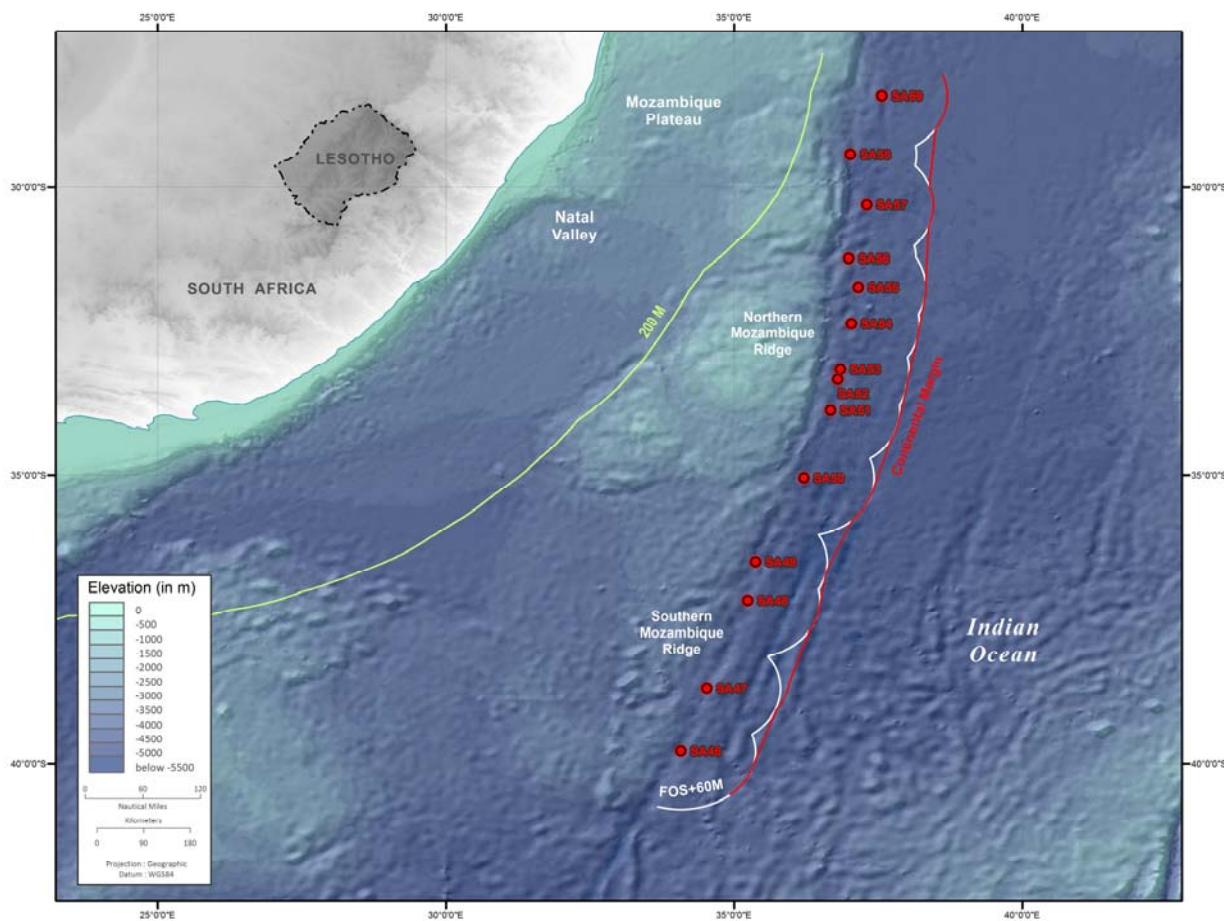

Figure 8*. Outer edge of the continental margin (red line), agreed FOS points (red points) and FOS+60 (white line). The Commission found insufficient evidence to approve points SA46, SA47, SA48, SA49, SA50 and SA59.

2.2 The application of the 1% sediment thickness formula (paragraph 4(a)(i) of article 76)

- 88 South Africa submitted sediment thickness points as part of its initial submission. From its examination of the data supporting these points, the Subcommission informed the delegation that it had no confidence in the sediment velocity data provided. Consequently, South Africa withdrew its sediment thickness points and relied solely on 60 M formula arcs.

2.3 Configuration of the Outer Edge of the Continental Margin

- 89 East of the Mozambique Ridge, the outer edge of the continental margin extends approximately 1300 km northwards from about 40°S. FOS points have been recommended by the Commission for approximately 400 km of this margin.

2.4 Recommendations

- 90 East of the Mozambique Ridge, the outer edge of the continental margin beyond 200 M is based on points on 60 M formula arcs as described in section 2.1, in accordance with paragraph 7 of article 76, of the Convention (Figure 8). The Commission recommends that these arcs and points be used as the basis for delineating the outer limits of the continental shelf in this region.

3. The application of the constraint criteria (paragraphs 5 & 6 of article 76)

- 91 The fixed points comprising the line of the outer limits of the continental shelf shall be based on the outer edge of the continental margin as described in sections 2.1 and 2.2, taking into consideration the constraints contained in paragraphs 5 and 6 and of article 76 of the Convention.
- 92 The outer limits of the continental shelf cannot extend beyond the constraints as per the provisions contained in paragraphs 5 and 6 of article 76 of the Convention. The fixed points comprising the line of the outer limits of the continental shelf on the seabed, drawn in accordance with paragraph 4(a)(i) and (ii), either shall not exceed 350 M from the baselines from which the breadth of the territorial sea is measured, or shall not exceed 100 M from the 2,500 metre isobath for those parts of the continental margin that are classified as natural components of that margin.
- 93 For the outer limits of the continental shelf in the Mozambique Ridge margin region of the South African mainland, South Africa has invoked a combination of the distance and the depth constraints. Except for a limited zone north of approximately 31°S, consideration of the outer limits of the continental shelf only involves an examination of the construction of the depth constraint line.

3.1 The construction of the distance constraint line

- 94 The distance constraint line submitted by South Africa is constructed by arcs at 350 M distance from the baselines (Figure 9). The Commission agrees with the procedure and its accuracy applied by South Africa in the construction of this constraint line.

3.2 The construction of the depth constraint line

- 95 The Commission agrees that the depth constraint of 100M seaward of the 2500m isobath is an applicable constraint in the northern Mozambique

Ridge margin section of the Submission, since the northern Mozambique Ridge is connected morphologically and geologically to the continental margin of South Africa through the Mozambique Plateau. The 2,500 metre isobath was constructed using data collected by a multibeam bathymetric system. From this isobath, the 2,500 m + 100 M constraint was constructed. The Commission agrees with the procedure and its accuracy applied by South Africa in its determination of the 2,500 metre isobath and the construction of this constraint line (Figure 9).

3.3 The construction of the combined constraints line

- 96 East of the Mozambique Ridge, South Africa has applied a constraint line based on the combination of lines constructed by the application of both the distance and depth constraints contained in paragraph 5 of article 76 of the Convention (see sections 3.1 and 3.2 above). The Commission agrees with the way this combined constraint line was constructed and applied (Figure 9).

4. The outer limits of the continental shelf (paragraph 7 of article 76)

- 97 The outer limits of the continental shelf result from the application of the combined constraints line, determined according to paragraph 96 above, to the continental margin as determined according to paragraph 90, above (Figure 9). For the northern Mozambique Ridge margin, as contained in the partial Submission of South Africa dated 5 May 2009 and its amendment of 19 November 2013, the outer limit of the continental shelf consists of fixed points connected by straight lines not exceeding 60 M in length. The fixed points, namely RSA_EC_OLCS_006 to RSA_EC_OLCS_189, are listed in Table 5, Annex I. The fixed points are established in accordance with article 76 of the Convention (Figure 9).
- 98 The Commission recommends that the delineation of the outer limits of the continental shelf on the Mozambique Ridge margin be conducted in accordance with paragraph 7 of article 76 of the Convention by straight lines not exceeding 60 M in length, connecting fixed points, defined by coordinates of latitude and longitude. Further, the Commission agrees with the procedure and its accuracy applied in delineating the outer limits of the continental shelf in the northern Mozambique Ridge region, including the determination of the fixed points listed in Table 5, Annex I as submitted on 28 July 2016.

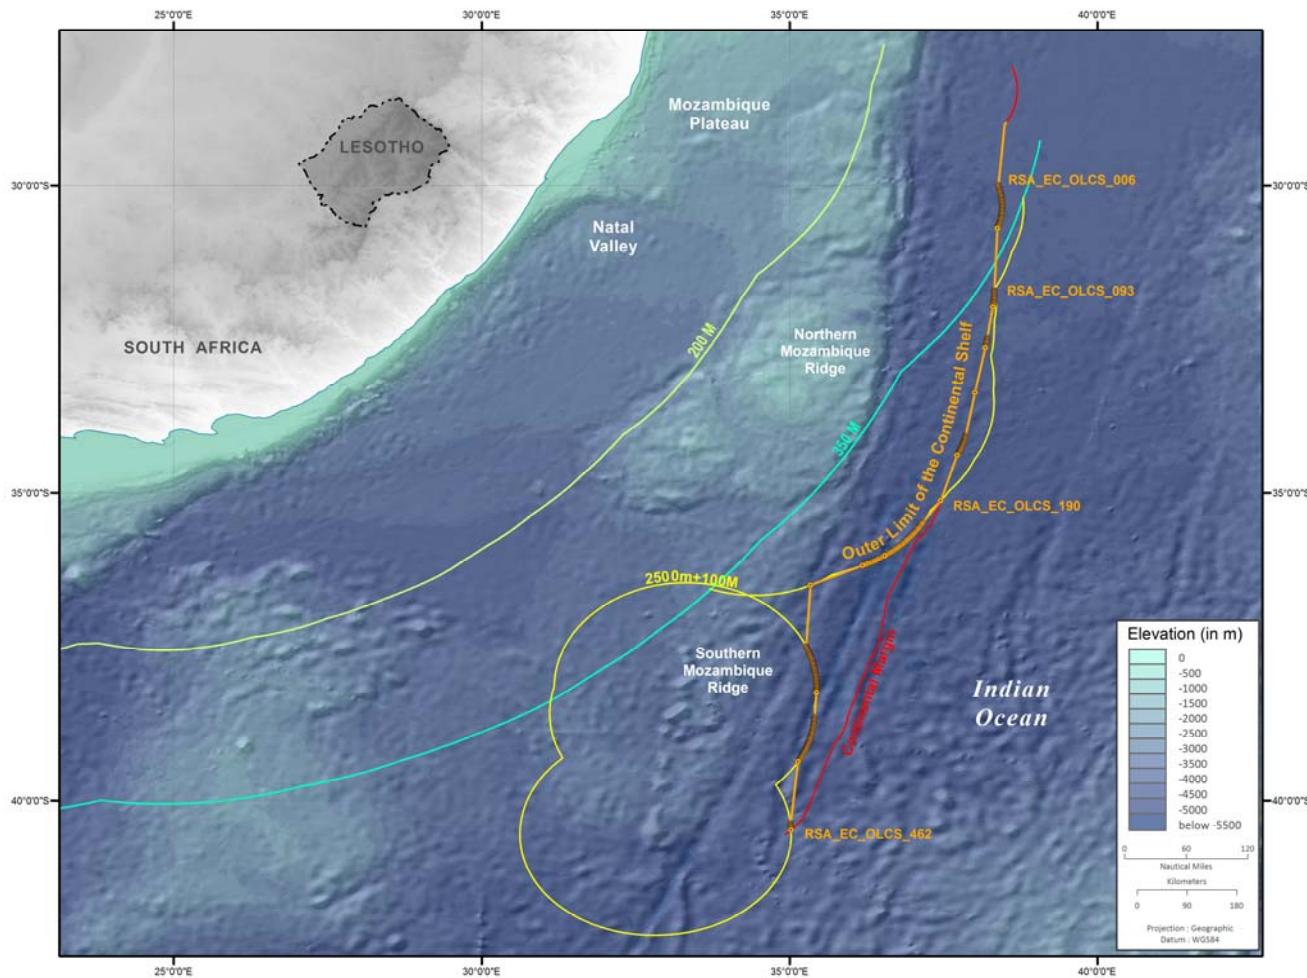

Figure 9*. Outer limits of the continental shelf (orange line), with limits and fixed points as recommended by the Subcommission, outer edge of the continental margin (red line), 2500m+100M constraint (yellow line), distance constraint (turquoise line) and 200M exclusive economic zone (light green line). The Commission limited its approval to points RSA_EC_OLC_006 to RSA_EC_OLC_189

5. Recommendations for the Mozambique Ridge Margin (paragraph 8 of article 76)

- 100 The Commission agrees with the determination of the fixed points listed in Table 4, Annex I establishing the outer edge of the continental margin for the eastern margin of the northern Mozambique Ridge. The Commission recommends that the delineation of the outer limits of the continental shelf for the Mozambique Ridge margin be conducted in accordance with paragraph 7 of article 76 of the Convention by straight lines not exceeding 60 M in length, connecting fixed points, defined by coordinates of latitude and longitude. Further, the Commission agrees with the procedure and its accuracy applied in delineating the outer limits of the continental shelf for the Mozambique Ridge margin, including the determination of the fixed points RSA_EC OLCS_006 to RSA_EC OLCS_189 listed in Table 5, Annex 1, and the construction of the straight lines connecting those points.
- 101 Furthermore the Commission recommends that South Africa submits additional scientific and technical data and information in support of those points that the Commission was unable to support in these recommendations.

V. CONCLUDING RECOMMENDATIONS (paragraph 8 of article 76)

- 102 The Commission agrees with the determination of the fixed points listed in Table 2, Annex I establishing the outer edge of the continental margin in the West Coast of the South African mainland. The Commission recommends that the delineation of the outer limits of the continental shelf in the West Coast of the South African mainland be conducted in accordance with paragraph 7 of article 76 of the Convention by straight lines not exceeding 60 M in length, connecting fixed points, defined by coordinates of latitude and longitude. Further, with the exception described in paragraph 68 and subject to the caveat expressed in paragraph 69, the Commission agrees with the principles applied in establishing the outer limits of the continental shelf for the West Coast region, including the determination of the fixed formula points listed in Table 3, Annex I, and the construction of the straight lines connecting those points (Figure 7). The Commission recommends that South Africa proceeds to establish the outer limits of the continental shelf in the West Coast region accordingly.
- 103 The Commission agrees with the determination of the fixed points listed in Table 4, Annex I establishing the outer edge of the continental margin for the eastern margin of the Mozambique Ridge. The Commission recommends that the delineation of the outer limits of the continental shelf for the Mozambique Ridge margin be conducted in accordance with paragraph 7 of article 76 of the Convention by straight lines not exceeding 60 M in length, connecting fixed points, defined by coordinates of latitude and longitude. Further, the Commission agrees with the procedure and its accuracy applied in delineating the outer limits of the continental shelf for the Mozambique Ridge margin, including the determination of the fixed points listed in Table 5, Annex 1, and the construction of the straight lines connecting those points.
- 104 For the portion of the Submission dealing with the Agulhas Plateau and Environs, and for those portions of the continental margin of the Mainland of South Africa for which the Commission was unable to recommend limits of its continental shelf, the Commission recommends to South Africa to investigate whether additional bathymetric and geophysical information might support a

revised submission for the determination of the outer limits of the continental shelf beyond 200 nautical miles.

ANNEX I: TABLES OF COORDINATES, FOOT OF CONTINENTAL SLOPE POINTS AND OTHER INFORMATION RELATED TO THE ESTABLISHMENT OF THE OUTER EDGE OF THE CONTINENTAL MARGIN BEYOND 200 M AND THE DELINEATION OF THE OUTER LIMITS OF THE CONTINENTAL SHELF BEYOND 200 M AS RECOMMENDED BY THE COMMISSION, BASED ON THE SUBMISSION BY SOUTH AFRICA ON 5 MAY 2009 AND ITS AMENDMENT OF 19 NOVEMBER 2009
