The United Nations Countering Terrorist Travel ('CT Travel') Programme, a flagship global initiative of the United Nations Office of Counter-Terrorism (UNOCT), assists Member States in building their capabilities to detect and counter-terrorists and other serious criminals by using Advance Passenger Information (API) and Passenger Name Record (PNR) data to improve the use of international databases with known and suspected terrorists and criminals, and enhance international information exchange, in accordance with Security Council resolutions 2178 (2014), 2396 (2017), and 2482 (2019), as well as international standards and recommended practices and human rights principles.
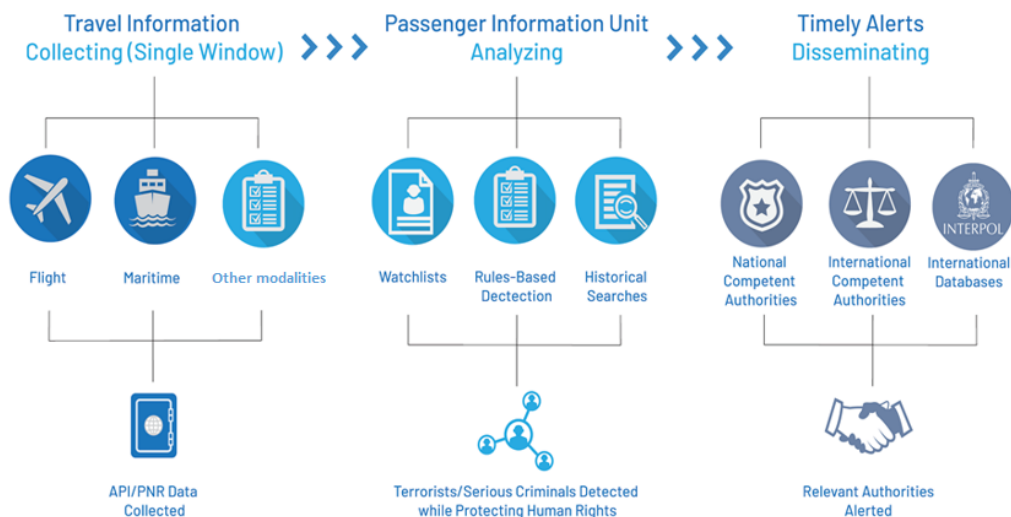

ALL-OF-UN APPROACH

In an All-of-UN partnership with the United Nations Counter-Terrorism Executive Directorate (CTED), the United Nations Office on Drugs and Crime (UNODC – AIRCOP/TPB), the International Civil Aviation Organization (ICAO), the United Nations Office of Information and Communication Technology (OICT), the International Criminal Police Organization (INTERPOL), and in close cooperation with the International Organization for Migration (IOM).
The Programme comprehensively assists Member States in legislative, operational, carrier engagement, and technical areas. This includes the donation and deployment of the goTravel software system. The Programme has been designed in accordance with human rights principles and United Nations policies in this regard.
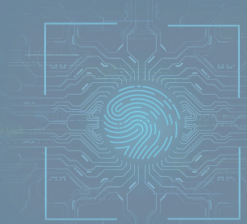

6 IMPLEMENTING PARTNERS

72 MEMBER STATES

The Countering Terrorist Travel Programme provides assistance to Member States across four key pillars of work, to build or enhance the detection capacity, known as Passenger Information Units (PIUs), applied depending on the state of readiness priorities of beneficiary Member States. This follows an assessment of the beneficiary Member State's current needs and joint development of a roadmap for implementation with national stakeholders through:

1 **First,** legislative assistance to put in place a legal framework that regulates the collection, processing and protection of data;

2 **Second,** operational assistance to set-up a Passenger Information Unit, including training and drafting standard operating procedures;

3 **Third,** facilitating air carrier engagement and connectivity, by building close cooperation with the transport industry; and

4 **Fourth,** providing technical assistance and support to deploy the goTravel software to collect, process, and analyze passenger data.

goTravel

The collection, sharing, analysis, and dissemination of data by the PIUs is empowered by the UN goTravel software system.

This technology is part of the comprehensive support package provided to beneficiary Member States and includes training, sharing of good practices, and expert advice. The goTravel software is a reconfigured version of the Travel Information Portal (TRIP) system donated by the Kingdom of the Netherlands.

Each beneficiary Member State also has secured access to the Cooperative Online Platform (COP), which allows real-time interactive collaborations and information exchange to share best practices and lessons learned.
