

Data visualizations

Explanatory note by the CDP Secretariat

About the visualizations

The graphs visualize the indicators of the LDC criteria and the supplementary graduation indicator (SGI) dataset in an interactive interface using Qlik Sense platform.

Country coverage

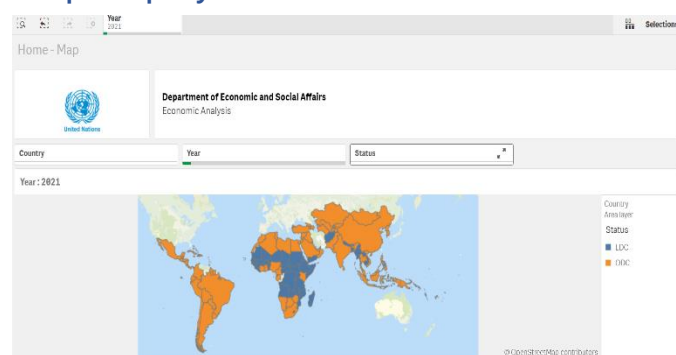

Data are collected for all United Nations Member States in developing regions, as so classified by the United Nations Statistics Division in its "Standard Country or Area Codes for Statistical Use" (M49 Standard).

Least developed countries (LDCs) are ordered according to their status in the graduation process and non-LDC developing countries (ODCs) are ordered based on their socio-economic status. These country groups are for analytical purposes only.

Data coverage

Data are available from 2002 onwards. While there is complete data coverage for the LDC criteria indicators, data gaps may exist for some indicators and/or years of the SGI dataset and are not filled. For consistency with the LDC criteria, all indicators have been postdated to align with data availability for an actual or hypothetical triennial review. Hence, data for the year 2021 refers to indicators that have been published in 2020 or early 2021 and are mostly reported by their sources as referring to the year 2019. Detailed information on data sources and data availability for the LDC criteria indicators can be found in the '[Time series estimates dataset \(2002-2021\)](#)' and for the SGI dataset in the '[Supplementary graduation indicators dataset](#)' file and corresponding '[Explanatory note](#)'.

Map display

What is shown:

- Status of all developing countries (LDC or ODC) on world map
- Values only for LDC criteria (GNI, HAI, EVI) for selected year (on cursor over country)

What can be selected:

- Year (single choice)
- Country (multiple choice)
- Status

Timeline for LDC criteria

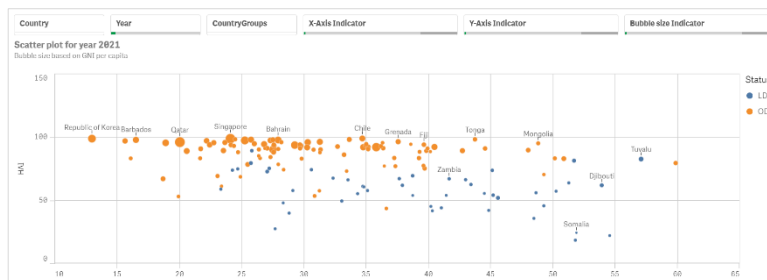

What is shown:

- Progress of LDC criteria (GNI, HAI, EVI) of selected country over time

What can be selected:

- Year (multiple choice)
- Country (single choice)

Scatter plot

What is shown:

- Relationship of three selected indicators (LDC criteria, LDC indicators or SGIs) for selected year

What can be selected:

- Year (single choice)
- Country (multiple choice)
- Country group (multiple choice)
- Indicators for X-axis, Y-axis and bubble size

Line graph
