Towards Sustainable Development for All

Working Paper Series Guidelines

Content

Papers in this series will explore topics that relate to the UN's broad development agenda. They should reflect original research and analysis by the authors, and provide intellectual “value-added” in the economic, social or environmental fields. They should be of interest to policy makers and to other researchers. In general, a working paper consists of preliminary analysis to provoke timely discussion on a topic. The paper would be further developed and elaborated before being submitted to a journal for publication.

Languages and format

English, French and Spanish are acceptable. Abstract required (100 words maximum).

Review process

Authors should send manuscripts to Lisa Morrison (morrisonL@un.org; ext. 3-4599) with copy to Maria Guran (guran@un.org; ext. 3-3211). Arrangements will be made by the OUSG for manuscripts to be given anonymous peer reviews.

In preparing their manuscripts, authors should ensure that they: a) convey a statement of the purpose and scope of the paper, and an outline, at the beginning; b) summarize findings and implications at the end and in the abstract; c) convey all information clearly and succinctly.

Authors should confirm in writing that they have double-checked their sources, quotes and references, that their work is original, and they have proofread the manuscript for grammar and spelling.

Dissemination

Manuscripts will be converted to pdf files and posted on the DESA website and uploaded to the UN iLibrary. Two hard copies should be sent to the Dag Hammarskjold Library (UNSA Collection, L-320).

Authors/divisions should post abstracts on the Social Sciences Research Network (www.ssrn.com) and/or other appropriate Internet sites. Where possible, links should be created between other sites and the DESA site.

Authors are encouraged to present their papers to and discuss them with their colleagues and other staff at seminars and meetings both within DESA divisions and at other venues.

Evaluation

A counter will be established to monitor and categorize “hits” to the individual working papers.
