A reader became my stalker. Is this the new normal for journalists?

Sources: The New York Times, Columbia Journalism Review
Journalists face a number of pressures that can prevent them from accurately depicting competing scientific claims in terms of their credibility within the scientific community as a whole. First, reporters must often deal with editors who reflexively cry out for “balance.” Meanwhile, determining how much weight to give different sides in a scientific debate requires considerable expertise on the issue at hand. Few journalists have real scientific knowledge, and even beat reporters who know a great deal about certain scientific issues may know little about other ones they’re suddenly asked to cover.

WORDS MATTER

As a journalist, you know firsthand that language and the meanings attached to words often impact, influence, develop, and change the attitudes toward the subjects of discussion. Your word choices can help tell your story in a manner that illuminates and creates greater understanding of these mental or substance use disorders and, by doing so, make it more likely people in need will seek help, or conversely, your choice of words can perpetuate stereotyping and discrimination. Use of “Person first” language—words that describe a person as having a condition and not as the condition itself (e.g., a person with schizophrenia vs. a schizophrenic, people with a mental illness vs. the mentally ill)—helps humanize the issue by placing the focus on the person living with a health condition. “Stigma” has been an all-purpose term for the negative attitudes faced by people with behavioral health issues. However, increasingly reporters are using more precise terms, when warranted, such as “prejudice,” “bias,” “social exclusion,” or “discrimination.” The terms listed below may have subtle differences; however, the use of one in place of another can make a significant difference in how people perceive themselves and how the public understands their conditions.

<table>
<thead>
<tr>
<th>Avoid saying:</th>
<th>Instead, say:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mentally ill</td>
<td>“a person with ____”</td>
</tr>
<tr>
<td>Lunatic</td>
<td>[a mental illness diagnosis]</td>
</tr>
<tr>
<td>Psycho</td>
<td></td>
</tr>
<tr>
<td>Schizophrenic (Schizo)</td>
<td></td>
</tr>
<tr>
<td>Wacko</td>
<td>“a person is ____”</td>
</tr>
<tr>
<td>Looney</td>
<td>[disoriented, depressed, delusional, paranoid, hallucinating, etc.]</td>
</tr>
<tr>
<td>Mad</td>
<td></td>
</tr>
<tr>
<td>Crazy</td>
<td></td>
</tr>
<tr>
<td>Nuts</td>
<td></td>
</tr>
<tr>
<td>CONDITION</td>
<td>DESCRIPTION OF SYMPTOMS</td>
