Dear Gregory and GMG members,

Thank you very much for organizing this retreat and sharing these references. Unfortunately no one from the French ministry or AFD will be able to attend that event. Nevertheless we wanted to share our thoughts on the indicators, prior to your brainstorming.

The French migration and development policy aim to support diaspora's development projects, to reduce the costs of remittances and to drive them towards productive investments and to promote job creation in country of origin. Therefore, our preferences in term of indicators are the following:

- Cost of remittances (goal: decrease of cost of sending money home)
- Share of remittances devoted to productive investment (goal: increase of job creating activities in home countries)
- Share of migrants with access to financial services (goal: increase of the share of migrants able to taking out a loan in country of origin, and therefore increase of job creating activities in home countries).

Please forgive us not to use the template, since we are not able at this stage to fill all the requested information on data collection.

Wishing you a nice and productive retreat,

Yours sincerely,

Pierre ROBION
