

## NAURU

### Information on Indicators for Sustainable Development

#### Name of Indicator Set :

The Government of Nauru's National Sustainable Development Strategy 2005 - 2020 encompasses all three dimensions of sustainable development. While no specific name can be accorded to the sustainable indicators utilized by Nauru, it should be clear that the development of the NSDS was conducted through national wide consultations covering demographics, economics, governance, social and environmental issues.

Nauru's National Sustainable Development Strategy further assesses its progress to the Millennium Development Goals and the indicators articulated in achieving the targets of the MDGs.

#### Indicators Website:

The Government of Nauru has no website for its indicators of sustainable development. Subsequently as aforementioned, no specific indicators for sustainable development are used by the Government of Nauru. It is expected that in the forthcoming years, the Government of Nauru will develop indicators for sustainable development however as a small island development state, there is a clear lack of capacity and knowledge for development of such indicators.

#### Date of Last Update:

Please see above
