

Sustainable development: the role of agriculture

Prof. Dr Rudy Rabbinge

University Professor Sustainable Development & Food Security

Chair of the CGIAR Science Council

...Sustainability ...

Sustainable agriculture

- Water use, land use, food security, energy security and rural development are closely related
- In this context, sustainable agriculture plays a pivotal role
- Broad support for increased productivity
- Broad political commitment for sustainable agriculture
- No clear consensus on what sustainable agriculture is

Sustainable agriculture

- Plant and animal production systems that in the long run make the most efficient use of limited resources to fulfill the needs of mankind
- Needs of mankind
 - Food security and bio-products
 - Economic viability
 - Environmental quality
 - Social equity
- Limited resources
 - Land
 - Water
 - Nutrients
 - Genetic resources
 - Labor

Agriculture in a dynamic environment

- Food security
 - Growing population
 - Shift in diets
- Climate change
 - Desertification
 - Invasive species and pathogens
- Biobased economy
 - Bio fuels
 - Bio products

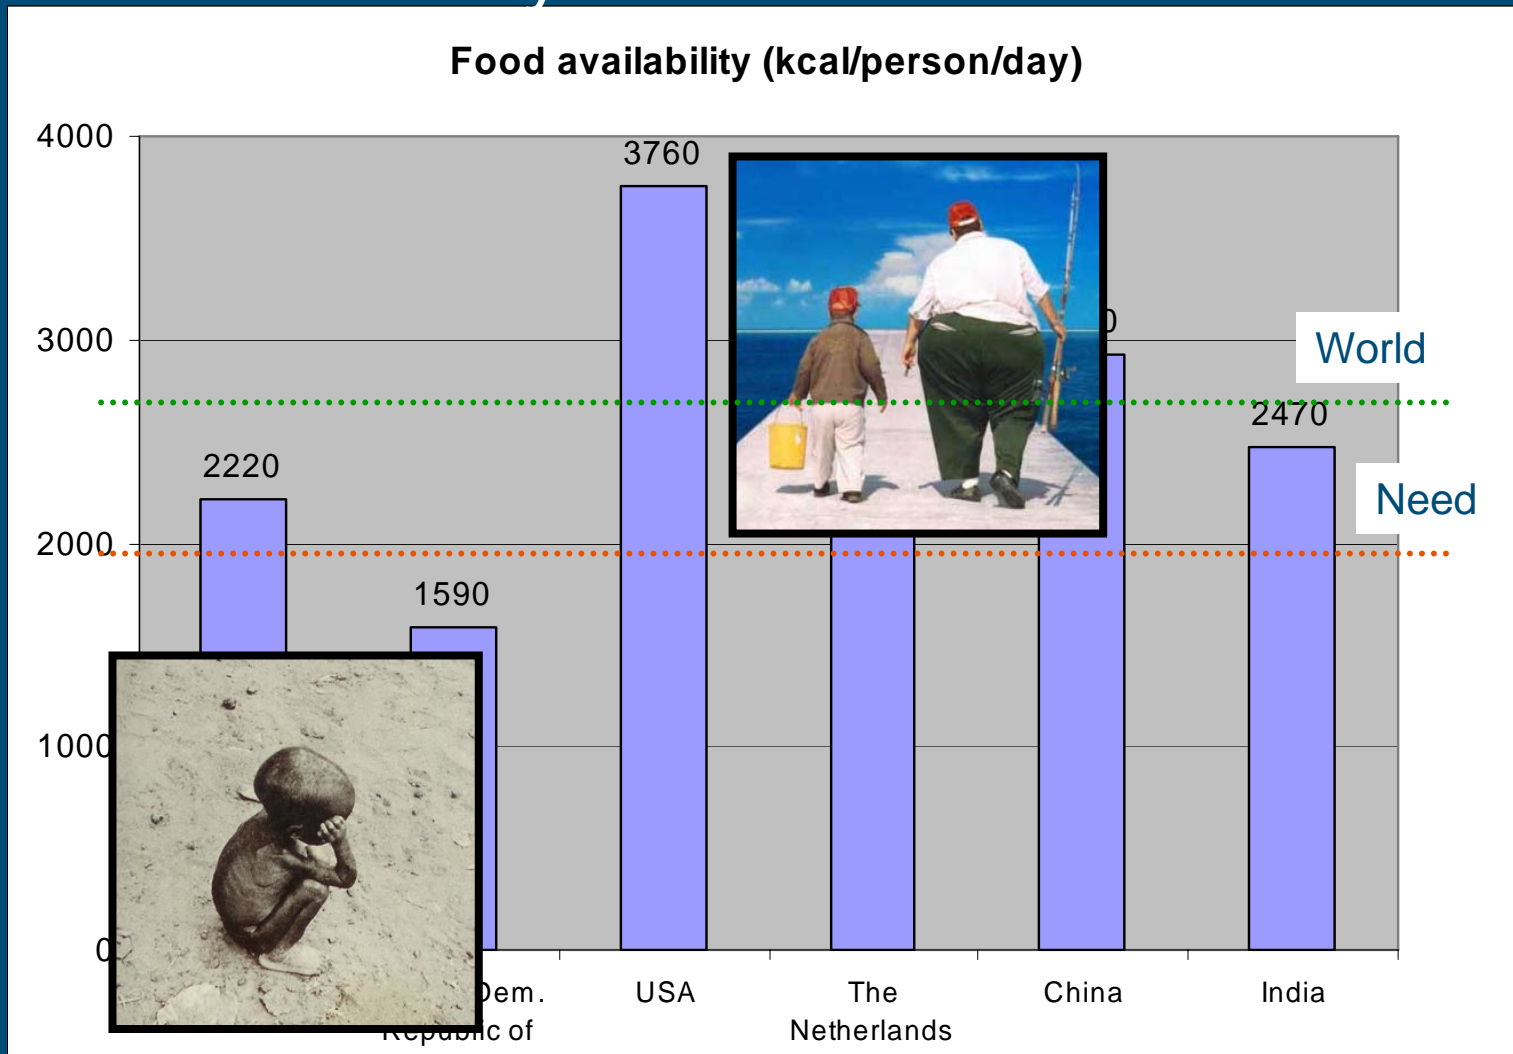

...Food Security ...

Global availability of food

Global Dietary Energy Consumption

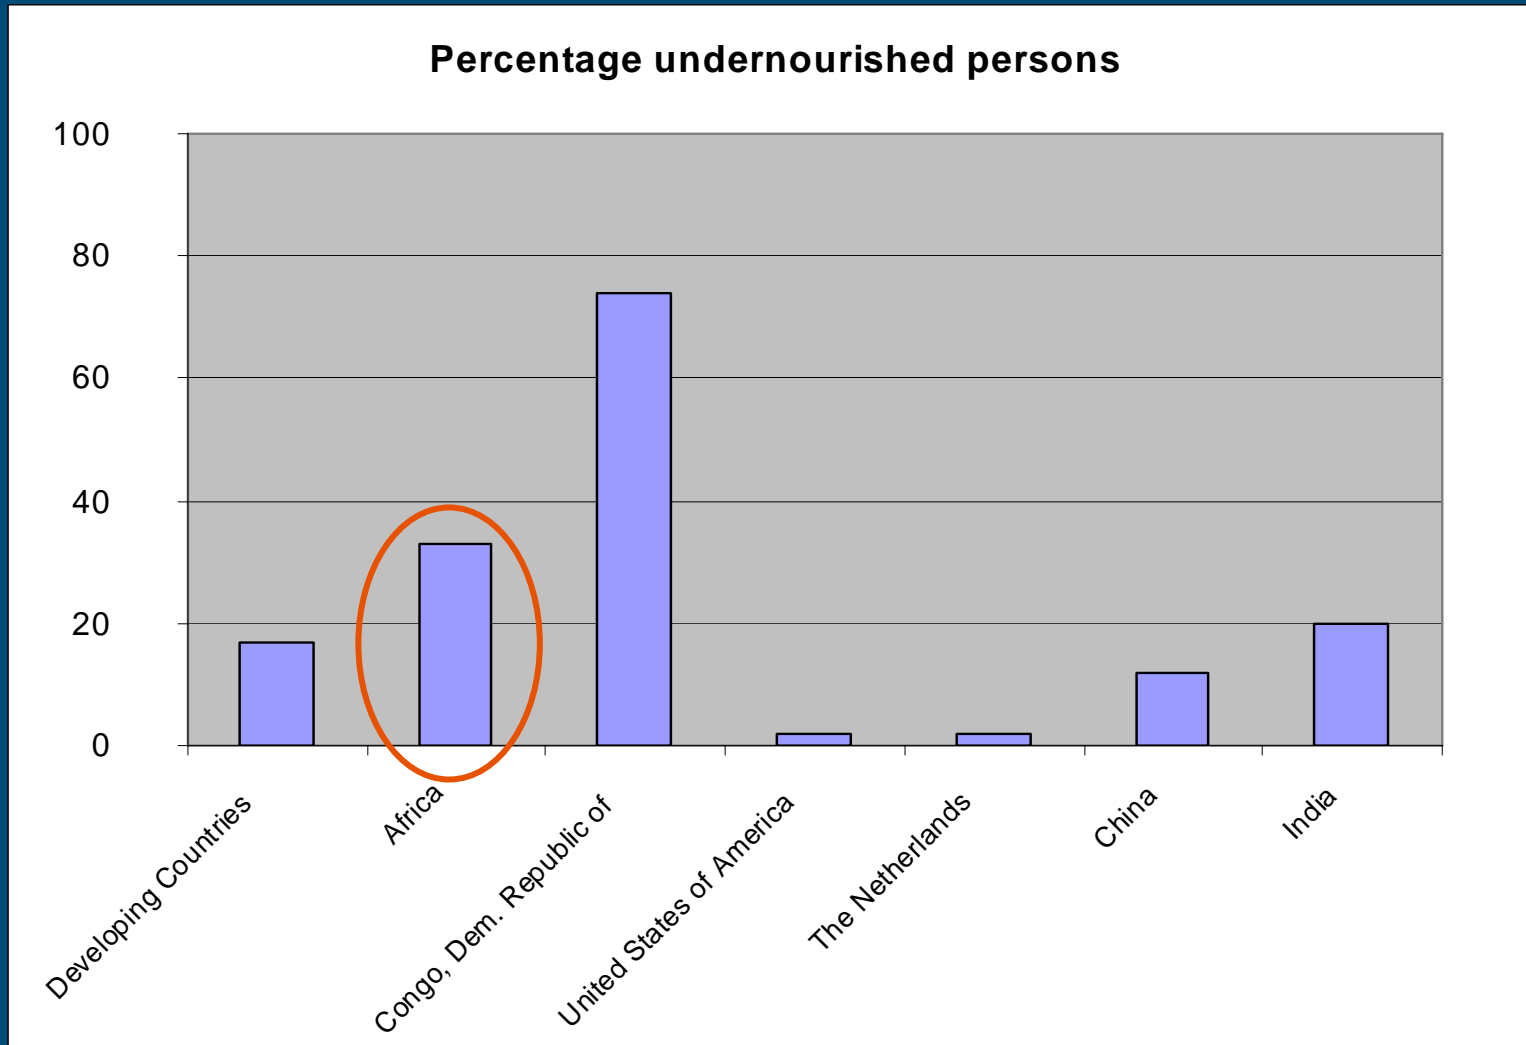

Global availability of food

Hunger in the world (data 2008)

Hunger in the world (data 2008)

Population growth

Billion

World population

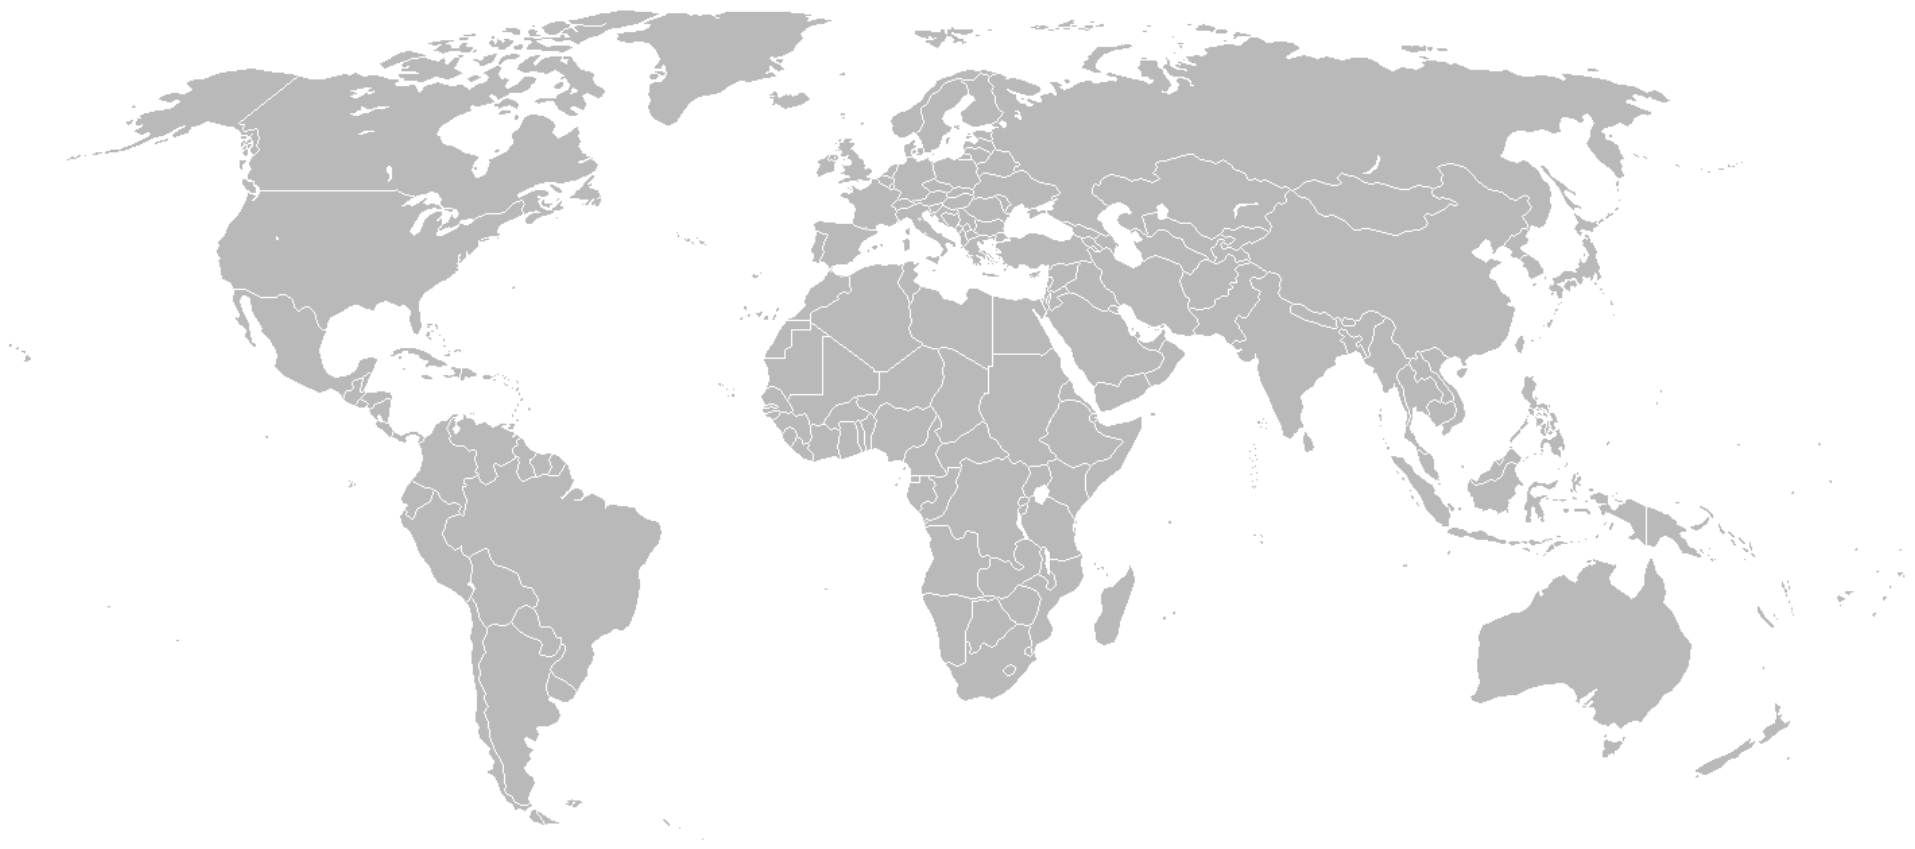

Shifting diet

Dietary Energy Consumption (2001-2003) per person

<i>Population (billion)</i>	Developed		Developing	
	1.65	%	4.35	%
Cereals	1020	31	1391	52
Oils & Fat	566	17	267	10
Animal Products	712	21	311	12
Sugar	427	13	194	7
Pulses	286	9	198	7
Fruits, vegetables and roots	308	9	295	11
	3319	100	2656	100

A central role of agriculture

...Africa ...

Kofi Annan

“I request the IAC to present to me, within a year, a report providing a technological strategic plan for harnessing the best science and technology to provide substantial increase in agricultural productivity in Africa”

“I would also welcome specific action proposals that could contribute to food security in Africa through a global collaboration of governments, civil society and the corporate sectors”

Diagnosis

1. Absence of dominating food crops
2. Multitude of farming systems
3. Weathered soils
4. Erratic rainfall
5. Endemic plant and animal diseases
6. Land / Labor productivity low
7. Dominant role for women – limited access to resources

Diagnosis (cont)

8. Lack of investment in agricultural research
9. Lack of knowledge infrastructure
10. Lack of functioning academic institutions
11. Brain drain
12. Not functioning local and regional markets
13. Land entitlement inappropriate
14. No stimulating political and economic environment
15. Inadequate capacity to impact global policy formulation

Strategic recommendations – four domains

1. Technology options that can make a difference
2. Building impact-oriented research, knowledge and development institutions
3. Creating and retaining a new generation of agricultural scientists
4. Markets and policies to make the poor prosperous and food secure

Priority farming systems

Major Farming Systems

Middle East and North Africa

Sub-Saharan Africa

Notes:
Projection = Geographic (Lat/Long)

FAO Disclaimer

The designations employed and the presentation of the material in the maps do not imply the expression of any opinion whatsoever on the part of FAO concerning the legal or constitutional status of any country, territory or sea area, or concerning the delimitation of frontiers.

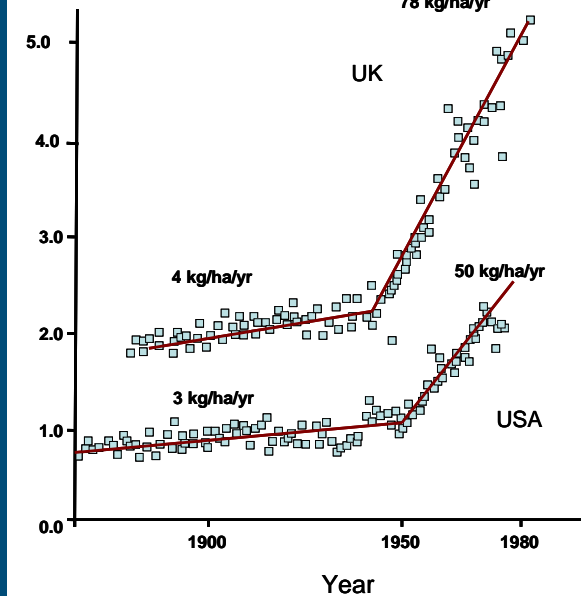

-  Irrigated system
-  Maize mixed system
-  Tree crop based system
-  Cereal root crop mixed system
-  Hunger Hotspot (CIESIN)

Technology options

Wheat Yields in the Netherlands from 1900 onwards

Wheat Yield (ton/ha)

Yield of Paddy (Indonesia)

Research Capacity

(a) Estimated number of full-time equivalent (FTE) agricultural researchers: 18700

Impact of investments

Table 7.2 Returns to government investments in rural Uganda

Investment	Benefit/cost ratio	Reduction in numbers of poor per million Ush
Agricultural research and extension	22.7	107.2
Education	2.7	12.8
Feeder roads	20.9	83.9
Murram roads	n.s.	40.0
Tarmac roads	n.s.	41.4
Health	0.6	2.6

Note: n.s. denotes effects were not statistically significant.

Fan, S., X. Zhang, and N. Rao. 2003. Public expenditure, growth and poverty reduction in rural Uganda. Discussion paper. Development Strategy and Governance Division. International Food Policy Research Institute, Washington, DC

Conclusion

- There are ample opportunities for Science and Technology to increase food security and to alleviate hunger.
- Rainbow Evolutions rather than a Green Revolution is the best option for increased Agricultural Productivity in Africa,
- Technology on the shelf is not sufficient for the African situation
- Agricultural S&T is powerful but will only work in a conducive socio economic and political environment

...Unsustainability spirals ...

Unsustainable development

- Desertification
- Deforestation
- Decreased production caused by
 - Wealth (Pollution)
 - Poverty (Overmining soils)
- Fertilizer consumption
 - phosphate
- Bio fuels

Unsustainable development

1. Due to *wealth*
2. Due to *poverty*

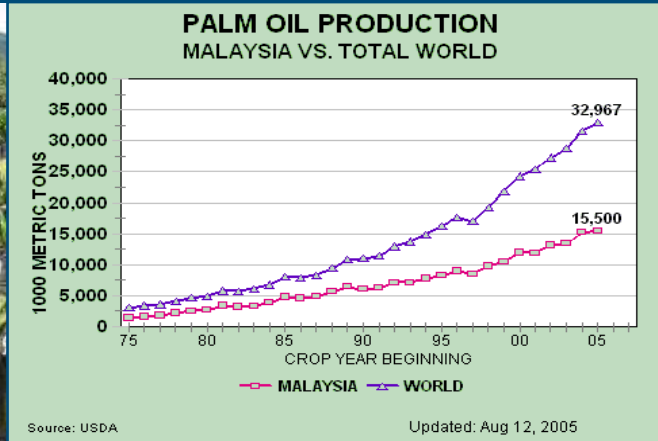

Oldeman et al,
ISRIC

Phosphorus

Energy: Competing claims

...Fuel for the Rich or Food for the Poor...

...A new paradigm ...

Sustainability: a new paradigm

- Long-term objectives are high production systems
- Optimize the use of scarce resources (land, water, labor, inputs and energy) for maximal productivity
- Stimulate agro-technological and ecological literacy
- Adopt the agro-ecological approach
- Jump start from just government to Public Private Partnerships
- Involve farmers (quadrangle approach)

Map Information

Land cover classification produced with data acquired in 2000 from the VEGETATION instrument onboard the SPOT4 satellite, with additional data from the radar instruments onboard the ERS and the JERS satellites.

La classification de l'occupation du sol a été obtenue par analyse des données de l'instrument VEGETATION à bord du satellite SPOT4 acquises en l'an 2000, avec des données complémentaires des instruments radar des satellites ERS et JERS.

Approximate Scale : 1:10,000,000

Production potentials African continent

Total water limited biomass

Bindraban, Conijn,
Jongschaap, Uithol

LUC = 1: Total water limited biomass production (t/yr)

Priority action points

1. Leap frog to advanced agro-production systems
2. Focus on high-tech for smallholders
3. Public Private Partnerships
4. Address land use changes in view of competing claims
5. Specific attention for the bio fuel issue

Thank you
