Country: GHANA Date of submission: 12 OCTOBER, 2012

# National Report to the Tenth Session of the United Nations Forum on Forests

#### INTRODUCTORY NOTE

This streamlined reporting format is prepared in response to the request made in the Resolution on Forests for People, adopted at the ninth session of the Forum in February 2011<sup>1</sup>. Accordingly, the Forum requested the UNFF Secretariat (UNFFS) to develop a streamlined reporting format, in consultation with other members of the Collaborative Partnership on Forests (CPF), to ensure simple voluntary national reporting for UNFF 10 focused on the implementation of the non-legally binding instrument on all types of forests, (hereinafter referred to as the forest instrument)<sup>2</sup> and a balanced reporting of all its four Global Objectives on Forests (GOFs).

The streamlined reporting format is the result of consultations with the members of the CPF Task Force on Streamlining Forest-Related Reporting. In addition, UNFFS and FAO consulted extensively with government representatives and international experts on this reporting format and its content. These consultations were conducted through five regional capacity-building workshops<sup>3</sup> with the participation of UNFF and FRA national focal points. A total of 136 national and international experts from 78 countries and up to five international organizations participated in the workshops. The workshops also benefitted from the four on-going FAO pilot projects in Ghana, Liberia, Nicaragua and the Philippines on the implementation of the forest instrument.

The reporting format is intended to complement ongoing reporting by other processes and focuses on identifying critical gaps in international and national reporting, and on issues that are not sufficiently covered by other reporting processes such as forest financing and forest contributions to the achievement of the Millennium Development Goals (MDGs). This will help to better measure the progress achieved across the full scope of the forest instrument and its GOFs.

The streamlined reporting format is prepared in a way that reduces the burden of multiple reporting exercises by countries. In this regard, the reporting format takes into account quantitative and qualitative information already submitted by countries to the FAO *Forest Resource Assessment* (FRA) 2005 and 2010<sup>4</sup>.

<sup>&</sup>lt;sup>2</sup> United Nations Forum on Forests, Report on the seventh session (24 February 2006 and 16-27 April 2007)\_E/2007/42, E/CN.18/2007/8 http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N07/349/31/PDF/N0734931.pdf?OpenElement

<sup>&</sup>lt;sup>3</sup> The workshops held in Bangkok, Thailand (10-12 October 2011), Nairobi, Kenya (13-15 December 2011), Accra, Ghana (6-8 February

<sup>2012),</sup> Beirut, Lebanon (11-13 April 2012) and Santiago, Chile (18-20 April 2012) were jointly organized by UNFFS and FAO. <sup>4</sup> http://www.fao.org/forestry/fra/67090/en/

#### **GUIDANCE FOR THE PREPARATION OF NATIONAL REPORTS**

This streamlined reporting format is made up of three parts:

- I. The forest instrument
- II. The four Global Objectives on Forests
- III. The contribution of forests to the achievement of the Millennium Development Goals

The forest instrument covers a broad spectrum of issues beyond forests. Its implementation requires close cooperation between different authorities. Consequently, the preparation of national reports may require a cooperative exercise among institutions and ministries such as ministries of environment, economic development, finance, agriculture, health and statistics, and in particular with national focal points for FRA, the NFP Facility, the ITTO C&I process and the Rio Processes, where applicable.

For reporting, please note the following:

- The fields with FRA indicators are highlighted in grey. This data will be derived by UNFFS from the FRA database;
- If information for a specific question does not exist, please enter NA (not available) or NR (not relevant) but do not leave the fields blank - all the responses to the questions contained in this reporting format are important for the Forum to analyze the progress, to identify the gaps and needs in implementing the forest instrument, including data gaps, and in finding ways and means to address them;
- Some of the questions include descriptive parts. We encourage countries to fill in these parts and provide context
  and background information in addition to the requested figures and the "yes" and "no" answers. At the same time,
  the responses should be limited [maximum 250] to keep the analytical efforts within reasonable bounds;
- The national report should be submitted in English, French or Spanish. To facilitate exchange of experience, countries are also encouraged to submit, where relevant, a translation of their summary report in English.
- The national reports should be submitted to UNFFS by 30 September 2012. Submission of the reports ahead of
  this deadline is encouraged, as this will facilitate the preparation of analyses and syntheses to be made available
  to the UNFF10;
- Member States are kindly requested to submit the original signed copy of the national report with an official letter from their respective institution/ministry, via mail or email to the address below. Electronic copies should be available in word processing software, and the scanned copy of the official letter, as well as any graphic elements, should be provided in separate files.

natural resources. All the above sectors are included in the ENRAC. The ENRAC has been established to take decisions on cross-cutting issues related to natural resources management. In addition an Environmental and Natural Resource Summit is organized annually to provide a platform for all the major stakeholders to discuss pertinent issues within the environment and natural resource sectors. Further, there exist the National, Regional and District Forestry Forums which are also platforms for discussing environment and natural resource issues at the grass-root level. Parliamentary Select Committee on Lands and Forestry is also actively engaged in policy discussions on environment and natural resources.

<ol><li>Are your national forest programmes and relevant policies and</li></ol>	Yes	No
strategies contributing to poverty eradication?		
If yes, please specify :		
National forest programs have been revised to include specific measures and		
resources for eradicating poverty.	YES	
National poverty eradication plans and strategies or equivalent have been		
revised to incorporate sustainable forest management.	YES	
Please describe specific actions or measures taken to eradicate poverty and their	r effects (maximum 250	words) <b>A National</b>

Forest Plantation Programme has been launched with planting targeted 10,000 ha per year with a corresponding employed generation of 10,000 people especially within the rural areas. The programme also aims at increasing food production in these areas and thus improving the livelihood of the rural people. Other employment avenues include coppice management, maintenance and patrol of forest reserve boundaries in all the ten regions of the country. The raising of seedlings through community contracts also provides a lot of revenue to rural people especially women and the youth. Alternative livelihood scheme has been developed for the communities fringing the forest reserves especially the Globally Significant Biodiversity Areas (GSBAs).

5. Has the forest instrument been translated into your country's	Yes	No
official/local language(s)?	YES	

Please list the language(s) into which the forest instrument has been translated. ENGLISH

**1B:** Financing sustainable forest management: Assessment of this thematic cluster will be conducted on the basis of data provided under Global Objective on Forests 4 (Q. 43-49).

# 1C: Capacity building and technology transfer

6. Total number of persons employed in forestry (1,000 persons-years); data will be derived by UNFFS from the FRA database (T13 – Employment).

 Total number of staff working in public forest institutions; data will be derived by UNFFS from FRA database (T15 – Institutional framework).

Does your country have adequate capacity and technology to implement	Yes	No
sustainable forest management?		NO

If no, please describe the main challenges, including institutional and technology priority needs and know-how areas of particular concern (maximum 250 words). *Inadequate capacity for protection, production of forest data, inventory, ecological assessment and the use and application of appropriate technology in these areas. There is also the need for capacity building in forest resource accounting, valuation and payment for ecosystem services, and GIS application. Logistic support is required for forest resource protection e.g. vehicles, protective clothing for forest guards and field quarters. Technology transfer required for value added wood processing and research into lesser used species.* 

8. Is your country engaged in SFM-related technology transfer?	Yes	No
	YES	
If yes, is your country a donor or recipient of SFM technology?

24. Did your country organize specific events and activities in support of		-		
24. Did your country organize specific events and activities in support of the International Year of Forests?	Yes		N	U
	<u>YES</u>			

If yes, please describe them (maximum 250 words).

- National launch the International Year of Forest in May 2011
- National Launch of World Environment Day, June 5, 2011;
- National launch of Greening Ghana Day, Sept 2011
- National Launch of Anti-Bushfire Campaign, October, 2011

25. Has your country implemented actions to increase public awareness		
of the importance of and the benefits provided by forests and	YES	
sustainable forest management?		
If yes, which of the following approaches have been utilized?		
Published materials, such as brochures, pamphlets, leaflets, posters, etc.		YES
Meetings with the general public to inform them of the benefits provided by		
forests to society		<u>YES</u>
Meetings with private and public sector stakeholders to inform them of the		
benefits of sustainable forest management		YES

Other; please describe (maximum 100 words). *Meeting with National House of Chiefs on Benefit-Sharing arrangements organized in November, 2011. Regional and National Stakeholder consultation meetings were organized in 2011 to discuss the existing benefit-sharing schemes in the forest sector and how to improve upon them to enhance the implementation of the REDD+ initiative in Ghana.* 

2F: Private sector and industry		
26. Do stakeholder participation mechanisms in support of sustainable	Yes	No
forest management exist that engage the private sector and		
industry?	<u>YES</u>	
27. Have you established or strengthened public-private partnerships to	Yes	No
advance sustainable forest management?	YES	

If yes, please describe (maximum 250 words). Ghana is implementing forest rehabilitation programmes through public private partnerships in degraded forest reserves. To date nearly 20,000 ha of such plantations have been established since 2005. Plans have also been approved to further enhance this collaboration following success in earlier ventures. Participation mechanisms include: i. Regular engagement of timber industry and trade associations, ii. Formation of industry clusters for the small and medium scale enterprises (SMEs) iii. Collaboration with civil society organizations and forest sector NGOs on sustainable forest management issues iv. Educational and awareness creation workshops and media programs on the ills of illegal timber operations.

Describe these mechanisms and their functions. What specific role do the private sector and industry play in promoting and supporting the forest instrument and sustainable forest management? (maximum 250 words). *Government provides technical services support while the private sector provides capital with communities supplying land as equity in plantation ventures.* There exist timber industry and trade associations through which capacity building, skills development and extension services are channeled. Clusters of industry small and medium scale enterprises (SMEs) have been formed for effective engagement in areas of skills development through the provision of short term technical experts to address the needs of cluster SMEs. Provision of common pool of processing facilities for use by SMEs to enhance their production and marketing capabilities exist in selected locations. There are regular interactions and collaboration with Civil Society Organizations (CSOs) and forest sector NGOs (such as Tropenbos International) to address problems of illegal timber operations has been intensified.

2G: Indigenous and local communities

28. Are tenure and user rights of local communities and indigenous	Yes	No
peoples over publicly-owned forests recognized by law?	YES	

Describe how they are recognized and practiced (maximum 250 words). They are allowed access to areas of cultural or traditional importance to perform rituals according to their traditional norms and practices.

29. Are local communities and indigenous peoples benefiting from the	Yes	No
goods and services produced by forests?8	YES	
Describe how this is functioning (maximum 250 words). Where the need is expressed	d, permits are issued	to them to collect
he approved resources for their subsistence.		
30. Are traditional forest-related knowledge and practices used in forest	Yes	No
management, planning and implementation?	YES	-
Explain how they are used and by whom (maximum 250). Traditional forest related	-	
norms and practices related to sacred groves are used in the management, p	lanning and implemer	ntation of forestry
sector activities		
31. Do stakeholder participation mechanisms in support of sustainable forest	Yes	No
management exist for the engagement of the following?	YES	
ndigenous peoples (where applicable)	Not applicable	
ocal communities	YES

#### PART III: Achievement of the Millennium Development Goals

Forests can make significant contributions to poverty reduction, improved health, education and gender equity. Sustainable forest management aims to enhance the contribution of forests to the achievement of the internationally agreed development goals, including the Millennium Development Goals (MDGs). However, the evidence of this contribution and greater recognition of the value of sustainably managed forests are difficult to gather.

Currently the only forest-related official MDG indictor that provides information on the proportion of land area covered by forest is Indicator 7.1 under Goal 7: Ensure environmental sustainability. This indicator, however, neither reflects the full range of benefits and services including socio-economic benefits of forests to society, nor the contributions of forests to the achievement of other MDGs. Establishing the direct and indirect links between forests and MDGs is pivotal to ensure that concrete efforts are being taken to reverse the loss of forest cover and to prevent forest degradation while maximizing the benefits of forests for achieving sustainable development.

The aim of this part of the reporting format is to explore the existing data, evidence basis and cases demonstrating the contribution of forests and sustainable forest management to MDGs, at the same time identifying gaps in the monitoring systems and lack of adequate indicators.

Please indicate the most forest relevant MDGs in yo	our country	
Goal 1: Eradicate extreme poverty and hunger:		
Does SFM contribute to achieving this goal in your country?	<u>Yes</u>	No
If so, do you have specific indicators and data which could be/are being used to assess this contribution?	<u>YES</u>

Yes NA E.G Use of Medicinal <u>Yes</u> YES	No Plants No No

Yes	No
YES	

Please list the indicators. Number of global partnerships or agreements signed by Ghana. E.G. the Voluntary Partnership Agreement with the EU.

Please describe how forests contribute to achieving this goal (maximum 250 words). The maintenance of appreciable forest cover and the design and implementation of credible sustainable forest management policies and programmes have enabled Ghana to earn global partnerships with GEF, DFID, WB, FAO and the EU, ITTO, among others. A good example is the implementation of the NLBI in partnership with the FAO and the support for the implementation of Ghana's REDD Readiness Plan under the REDD+ initiative being supported by the World Bank under the Forest Carbon Partnership programme .

Please provide a short description of case studies and success stories on data collection on the contribution of forests to achieve MDGs that could serve as examples of good practice for other countries (maximum 250 words). The Forestry Commission collected data on the contribution of the forestry sector to Ghana's Gross Domestic Product (GDP). The value of the standing stock of trees in forest plantations and the amount of food crops produced through the implementation of the modified taungya system were computed. The data collected enabled the Ghana Statistical Service to appreciate the contribution of the forestry sector to the GDP. This contributed to the rebasing of the GDP computation on 2006 and the eventual classification of Ghana as a middle income country in 2011. The data collected also indicated the extent to which the forestry sector is contributing to food security and hence to MDG 1 in particular.
