

## Statement of Ukraine – Agenda Item 5

Ukraine welcomes work done on analyses of the impact of the coronavirus disease (COVID-19) pandemic on forests and the forest sector.

As well we are supporting a list of potential responses and measures for the recovery of the forest sector and the enhanced contribution of forests to inclusive sustainable forest management.

We also request to consider making follow-up analyses. We are still facing long-term quarantine limitations and it is quite important to share best practices and best responses in this regard.
