

By 2030, ensuring healthy lives and well being of all ages Effects of the COVID-19 pandemic threatens progress in global health

Between beginning January 2020 and end December 2021, the global excess **mortality related to the COVID-19 pandemic** was **14.91 million** worldwide

Death associated with the COVID19 pandemic in Europe from 01 Jan 2020 to 31 Dec 2021

Map of the World of Mean Excess Death associated with COVID-19 pandemic per 100,000

Mean Excess Death by Age and Sex (Average of 2020 to 2021)

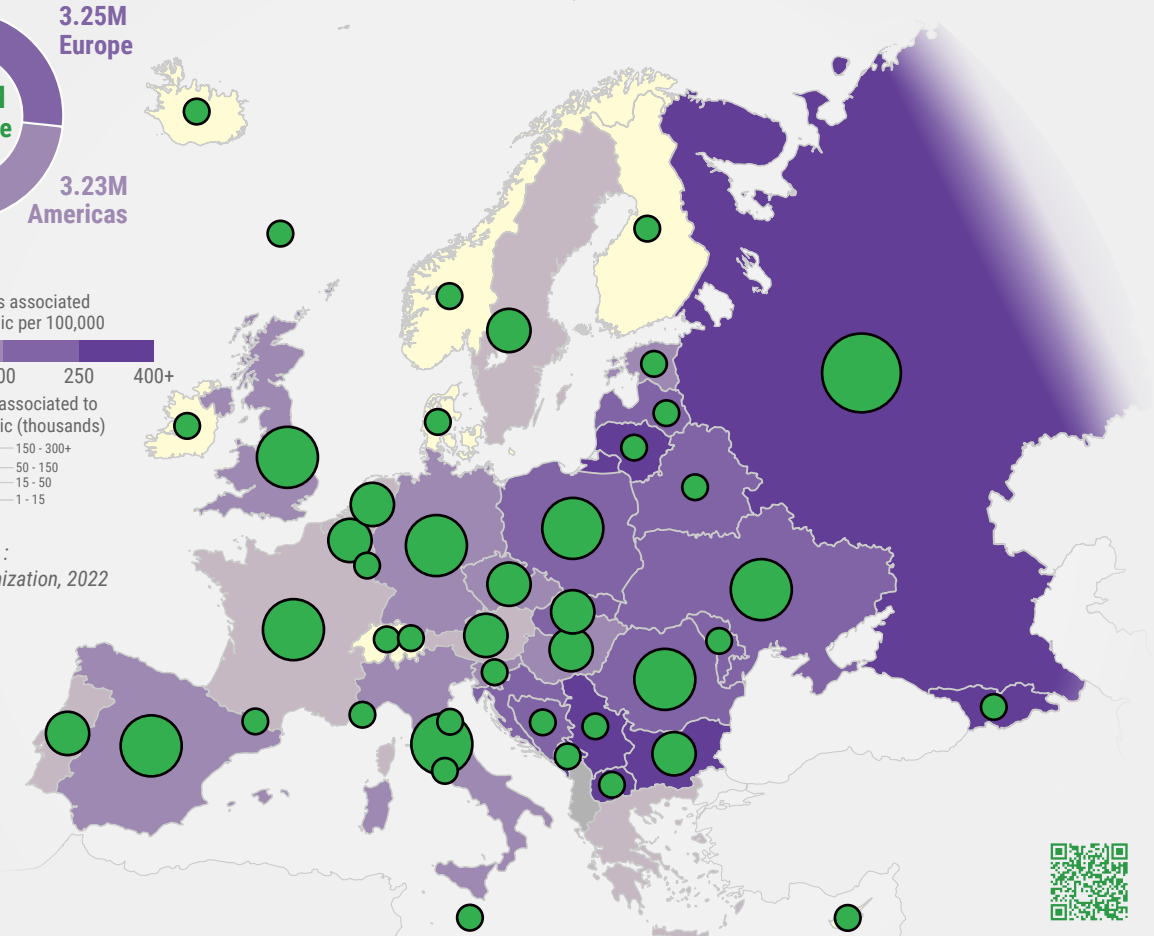

▲ Negative values may be related to health measures (as lockdown, remote work, social distancing...) reducing deaths from other causes than COVID-19

◀ Mean excess death for men is higher than woman and higher for older adults
