The Committee for Development Policy (CDP) is a subsidiary body of the United Nations Economic and Social Council. It provides independent expert advice to the Council on a wide range of issues related to the 2030 Agenda for Sustainable Development. The Committee is also responsible for reviewing the least developed countries (LDCs) category, making recommendations as to which countries should be included in the category or graduate therefrom, and monitoring the progress of countries during and after graduation from the category.

Handbook on the Least Developed Country Category:
Inclusion, Graduation and Special Support Measures
Fourth Edition

United Nations
October 2021
United Nations Department of Economic and Social Affairs

The United Nations Department of Economic and Social Affairs (UN DESA) is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department’s mission is to promote and support international cooperation in the pursuit of sustainable development for all. Its work is guided by the universal and transformative 2030 Agenda for Sustainable Development, along with a set of 17 integrated Sustainable Development Goals adopted by the United Nations General Assembly. UN DESA’s work addresses a range of crosscutting issues that affect peoples’ lives and livelihoods, such as poverty eradication, employment, social inclusion, inequalities, population, indigenous rights, macroeconomic policy, development finance and cooperation, public sector innovation, forest policy, climate change and sustainable development. For more information, visit https://www.un.org/en/desa.

Committee for Development Policy

The Committee for Development Policy (CDP) is a subsidiary body of the United Nations Economic and Social Council (ECOSOC). It advises the Council on a range of issues related to development policy and sustainable development, including periodically reviewing the criteria for and composition of the least developed country (LDC) category. The 24 members of the CDP are nominated by the United Nations Secretary-General in their personal capacity and are appointed by ECOSOC for a period of three years. The Secretariat of the CDP is part of the Economic Analysis and Policy Division (EAPD) of the United Nations Department of Economic and Social Affairs (UN DESA). For more information, visit https://cdp.un.org/.
Foreword

The category of the least developed countries (LDCs) was established in 1971 as a special group of developing countries characterized by a low level of income and structural impediments to growth and requiring special measures for dealing with those problems. The Committee for Development Planning, the predecessor of the Committee for Development Policy (CDP), was a key actor in the establishment of the LDC category. Since then, CDP has been responsible for identifying which countries should belong to the LDC category. For this purpose, it has developed a rigorous methodology, as detailed in this publication.

The Handbook on the Least Developed Country Category has been prepared by the United Nations Department of Economic and Social Affairs, which hosts the secretariat of CDP. It responds to the need to make the methods and approaches used in the identification of LDCs, and the international support measures available to them, known to a wide range of stakeholders. It should be useful for all those interested in finding solutions to the development challenges faced by these most disadvantaged countries. It is more vital than ever to galvanize support at a time when LDCs are severely impacted by the coronavirus disease (COVID-19) pandemic.

This revised edition has been updated to reflect recent developments in the LDC category, including refinements to the LDC criteria and the progress of several countries towards graduation from the category amid the COVID-19 pandemic. Moreover, this edition of the Handbook contains additional information on international support measures, in particular on smooth transition provisions for countries graduating from the LDC category.

I hope that the updated and revised Handbook will continue to promote a better understanding of the category and the challenges confronting LDCs. I trust it will inform the upcoming Fifth United Nations Conference on the Least Developed Countries, scheduled to be held in January 2022 in Doha, and other global efforts working towards implementing the 2030 Agenda for Sustainable Development.

Liu Zhenmin
Under-Secretary-General for Economic and Social Affairs
United Nations

Acknowledgements

The present publication is a collaborative undertaking of the Committee for Development Policy (CDP) and the United Nations Department of Economic and Social Affairs. The procedures presented herein reflect the outcome of collaborative efforts by various members, past and current, of CDP. This issue of the publication was prepared by the secretariat of the Committee for Development Policy under the general supervision of Roland Mollerus, Secretary of the Committee. It was coordinated by Matthias Bruckner, who counted on invaluable substantive support from Annette Becker, Mereseini Bower and Márcia Tavares. The contributions of Leah C. Kennedy, Anne-Laure Kelly, Katherine Brielmaier, Nardos A. Mulatu and Nancy Settecasi in producing this publication are also gratefully acknowledged.
Summary

The fourth edition of the *Handbook on the Least Developed Country Category* provides comprehensive information on the least developed country (LDC) category, including a description of procedures and methodologies used in the identification of these countries and the international support measures available to them. It builds upon and updates the previous edition, published in 2018. The *Handbook* aims at providing comprehensive and up-to-date information on the LDC category. The publication is intended for use by government officials, policymakers, researchers and others interested in the LDC category.

The *Handbook* is organized as follows: chapter I provides a detailed description of the procedures for inclusion in and graduation from the category. Chapter II presents an overview of the international support measures accorded specifically to LDCs, including measures related to trade, development assistance and support for participation in international forums. Specific attention is given to the impact of graduation on these support measures. Lastly, chapter III provides a detailed explanation of the LDC criteria, including composition, methodologies and data sources. In addition, the chapter presents specific examples of the application of the criteria, based on the Committee for Development Policy (CDP) 2021 triennial review of the list of LDCs.

As measures of support, provisions, procedures and methodologies evolve over time, the information contained in the present *Handbook* will be updated on a regular basis to reflect relevant developments, including the outcome of the triennial reviews of the list of the least developed countries. Updates will be posted at www.un.org/ldcportal/. Up-to-date detailed information, including statistical data on the LDC category, is also available on the CDP website at http://cdp.un.org.

Explanatory notes

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. The term “country” as used in the text also refers, as appropriate, to territories or areas. The designations of country groups are intended solely for statistical or analytical convenience and do not necessarily express a judgment about the stage of development reached by a particular country or area in the development process.

The views expressed in this publication are those of the Committee for Development Policy (CDP) and do not necessarily reflect the opinions and policies of the United Nations.

Every effort has been made to provide accurate information. Errors brought to the attention of the CDP secretariat will be corrected in forthcoming issues and online. This publication in no way replaces legal texts or official policy documents.

The least developed country category: criteria and procedures for inclusion and graduation

The least developed country category

The least developed country (LDC) category comprises the most disadvantaged of the developing countries. As of 2021, 46 countries are included in the category (see figure I.1). LDCs comprise approximately 14 per cent of the world’s population, but account for less than 1.3 per cent of global gross domestic product (GDP) and for approximately 1 per cent of global trade.¹

Figure I.1

Notes:
- Final Act and Report of the United Nations Conference on Trade and Development, annex A.I.1, United Nations publication, Sales No. 64.II.B.11. The term “Less developed countries” had been referred to earlier—for example, in regard to food surpluses in a 1960 report by the Secretary-General and in resolution 1714 (XVI) of 19 December 1961.
- General Assembly resolution 2564 (XXIV) of 13 December 1969.
- General Assembly resolution 2626 (XXV) of 24 October 1970 and General Assembly resolution 2724 (XXV) of 15 December 1970.
- Resolution 1628 (LI) of 30 July 1971. The list was also approved by the Trade and Development Board (governing body of UNCTAD) at its eleventh session.
- Resolution 2768 (XXVI) of 18 November 1971.
The LDC category was established by the General Assembly in 1971, in its resolution 2768 (XXVI), as a result of the acknowledgement by the international community that special support measures were needed to assist the least developed among the developing countries (see figure I.2 for a brief history).

The United Nations defines LDCs as countries that have low levels of income and face severe structural impediments to sustainable development. The countries categorized as LDCs are identified based on specific criteria and procedures, described in detail below.

The initial list of LDCs contained 25 countries; 28 additional countries were added throughout the years, as countries gained independence and faced severe development challenges—in some cases compounded by the effects of independence, war and conflict—and/or faced a sustained deterioration of economic conditions. Six countries had graduated by 2021 (see figure I.3).

Decisions on inclusion in and graduation from the list of LDCs are made by the General Assembly, based on recommendations by the Committee for Development Policy (CDP) (see box I.1), endorsed by the Economic and Social Council (ECOSOC). The Committee analyses the list of LDCs every three years during what are called triennial reviews of the least developed country category (hereafter referred to as triennial reviews), to identify any countries that may qualify for inclusion in or graduation from the LDC category. The criteria and processes for inclusion in and graduation from the list are described in detail in the next sections.

Since the establishment of the LDC category, support measures have been developed for these countries in the context of international agreements and organizations as well as by individual countries, educational institutions and others (see chap. II), with a view to assisting LDCs in overcoming their challenges. Comprehensive programmes of action for LDCs were adopted at four successive United Nations Conferences on the Least Developed Countries, the most recent being the Programme of Action for the Least Developed Countries for the Decade 2011-2020 (Istanbul Programme of Action) (see figure I.4). A new programme of action is to be adopted at the upcoming fifth United Nations Conference on the Least Developed Countries, scheduled to be held in January 2022. Moreover, many key United Nations agendas and programmes continue to recognize the special challenges of LDCs and their particular need for support, including the 2030 Agenda for Sustainable Development and the Addis Ababa Action Agenda of the Third International Conference on Financing for Development (General Assembly resolutions 70/1 and 69/313). In many negotiations and intergovernmental deliberations on development issues, in particular with respect to trade and climate change, LDCs act as a group, aiming to promote their common interests.

---

2 In addition, Sikkim, which was one of the 25 original least developed countries (LDCs), ceased to be an LDC when it became a state of India in 1975. Moreover, both the People’s Democratic Republic of Yemen and the Yemen Arab Republic were LDCs when the two countries merged in 1990 into the Republic of Yemen, which was confirmed as an LDC by the Committee for Development Planning in 1991 and remains on the list of LDCs. See also https://ask.un.org/faq/190378.

3 Triennial reviews have been conducted since 1991. The most recent review before the publication of the present edition of the Handbook was completed in February 2021.

Note: Countries in bold have already graduated from the list; those in bold italics are scheduled for graduation. Blue arrows indicate inclusion; green arrows indicate graduation.

⁴ On 8 June 2021, the Economic and Social Council, in its resolution 2021/11, endorsed the recommendations by the Committee for Development Policy (CDP) to graduate Bangladesh, the Lao People’s Democratic Republic and Nepal. In line with the finding of CDP that a five-year preparatory period is necessary for these countries prior to graduation, the Council also recommended that the General Assembly decide that their graduations would become effective five years after the Assembly had taken note of the recommendations to graduate those countries. The General Assembly is scheduled to act on those recommendations during its seventy-sixth session (14 September 2021–12 September 2022).
### Programmes of action for the least developed countries

Criteria for defining the least developed country category

In 1971, the Committee for Development Planning examined common features of the economic and social development of LDCs and, on that basis, proposed quantitative criteria for the identification of countries to be placed on a list of LDCs. In that initial report, the Committee noted the need to further refine the criteria. This has led to subsequent refinements of the criteria over time to reflect improvements in data availability and the evolution in development theory and practice. From the outset, the Committee for Development Planning and subsequently, the Committee for Development Policy, utilized a multidimensional concept of development. The criteria originally covered social and economic dimensions, and, in 1999, CDP included indicators related to environmental vulnerability.

The latest version of the criteria for defining LDCs was adopted in 2020, after CDP completed a comprehensive review of the criteria during the period from 2017 to 2020. That review, mandated by the General Assembly and ECOSOC, took into account all aspects of the evolving international development context, including relevant agendas. CDP has adopted four principles it adheres to when refining the LDC criteria:

---

• **Inter-temporal consistency of the list and equitable treatment of countries** requires that refinements to the criteria and their application should not lead to a questioning of recent decisions on graduation and inclusion.

• **Stability of the criteria** implies that refinements should only be undertaken if they lead to a significant improvement in identifying LDCs.

• **Flexibility** refers to the application rather than the criteria themselves. The principle ensures that the criteria are not applied mechanically. CDP uses additional sources of information before making recommendations for inclusion and graduation (see below).

• **Methodological robustness and complete data availability** ensure that only high-quality indicators for which data are available in all developing countries and updated with sufficient frequency are utilized to identify LDCs.

The Committee for Development Policy continues to use three criteria to identify LDCs, which it defines as low-income countries suffering from the most severe impediments to sustainable development. Gross national income (GNI) per capita reflects the low-income aspect; two other criteria reflect key structural impediments related to a low level of human assets (human assets index, HAI) and a high vulnerability to economic and environmental shocks (economic and environmental vulnerability index, EVI). The LDC criteria are applied by CDP every three years to all Member States in developing regions. Countries are identified for inclusion in and graduation from the LDC list by comparing their criteria scores with thresholds established by CDP (see chap. III for details on indicators and thresholds).

There is an asymmetry between inclusion and graduation rules, with graduation requirements being more stringent than inclusion requirements (see table I.1). This asymmetry is intentional and serves to avoid frequent movements in and out of the category because of short-term fluctuations. For inclusion, countries must meet all three criteria at the established inclusion threshold levels. For graduation, a country needs to meet at least two criteria at the graduation thresholds, rather than only one. Hence, there can be countries on the LDC list that may no longer be considered by CDP as low-income but that are still characterized by both low human assets and high vulnerability to economic and environmental shocks and are therefore not candidates for graduation. Similarly, low-income countries could graduate if they have overcome both categories of structural impediments. Countries with a sufficiently high per capita income, however, can graduate even if they continue to

**Note:** Bold type indicates components that were added to the list for the first time in a particular year.
have low human assets and are highly vulnerable, if that income level is deemed to be sustainable.\footnote{Report of the Committee for Development Policy on its seventh session (14–18 March 2005) (Official Records of the Economic and Social Council, 2005, Supplement No. 13 (E/2005/33)).} In the view of CDP, such countries have sufficient resources to confront their impediments without requiring special international support measures.

For both inclusion and graduation, recommendations by CDP do not follow automatically from meeting the criteria. The Committee also considers additional information outlined in the following sections on procedures for inclusion and graduation.

**Procedures for inclusion in the least developed country category**

The procedures for inclusion in the LDC category, summarized in figure I.6 and detailed below, are designed to be conducted over the course of less than a year. Inclusion is not mandatory and requires the agreement of the Government of the eligible country.

The procedures for inclusion are as follows:

**Preliminary review by CDP subgroup**

- During a preparatory meeting to the triennial review (known as the expert group meeting), usually held in January, a subgroup of CDP reviews the performance of Member States in developing regions that are not on the LDC list against the inclusion criteria.
- If the subgroup determines that the country qualifies for inclusion, the CDP secretariat notifies the Government, through the country’s Permanent Mission to the United Nations in New York, of this preliminary finding and of its forthcoming consideration at the triennial review. In the notification, it invites the Government to provide its views on possible inclusion in the LDC category.
- The CDP secretariat also submits to the Member State a country assessment note that contains, among other information, an analysis of reasons for the recent deterioration of economic and social conditions, including an assessment of whether that deterioration is the result of structural or transitory factors.

**Triennial review**

- At the plenary meeting of CDP, typically held in late February, the full membership of CDP reviews the preliminary findings, including the Government’s views.
- If the Government has expressed objection to being included in the category prior to the plenary meeting, the finding of eligibility and the country’s objection are recorded in the report of CDP to ECOSOC and no further action is taken.
- Otherwise, if CDP confirms the eligibility and recommends inclusion, the CDP secretariat notifies the Government accordingly.

**Acceptance and endorsements**

- Unless the Government formally objects to the inclusion in response to the notification sent after the plenary session, CDP recommends, in its report to ECOSOC, the inclusion of the country in the list.
- Once ECOSOC endorses the CDP recommendation in its annual resolution on the report of CDP (typically adopted in June), the Government subsequently notifies the Secretary-General of its acceptance of inclusion in the LDC category.
• Afterwards, the General Assembly takes note of the recommendation through a resolution.
• The country becomes an LDC immediately, and the country is entitled to benefit from the support measures described in chapter II from that day on.

Acceptance and endorsement

Inclusion effective immediately

Note: Exact months may differ depending on the scheduling of the plenary meeting of the Committee.

Historical note: Between 1975 and 1991, there were no systematic reviews of the list of LDCs. After an initial review of the original list in 1975, conducted on the basis of a revision of the original criteria and data, decisions on inclusion followed an assessment of specific countries on the basis of the established criteria but initiated by a request through ECOSOC or the General Assembly.

Not all countries listed for consideration by the Committee for Development Planning were found eligible for inclusion, either because they did not meet the criteria or because the Committee was initially unable to make a decision in view of a lack of corroborating data (e.g., Angola, Kiribati, Liberia, Sao Tome and Principe and Tuvalu; all of them were later found eligible when data became available). Antigua and Barbuda, Dominica, Namibia, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Seychelles and Tonga were not recommended for inclusion by the Committee for Development Planning.

Ten countries have been included in the category since the systematic reviews began in 1991. As of 2021, the newly independent South Sudan was the last country to be included in the LDC category (ECOSOC resolution 2012/32 and General Assembly resolution 67/136).

In the 2021 triennial review, for the first time, no country that was not already on the list of LDCs met the inclusion criteria. However, in several instances in the past, countries had expressed objections to being included after the Committee for Development Planning and subsequently, the Committee for Development Policy found that they met the criteria. These include Ghana (in 1994), Papua New Guinea (in 2006 and 2009) and Zimbabwe (in 2006, 2009, 2012, 2015 and 2018). In other instances, CDP did not recommend countries for inclusion as it viewed the countries meeting the criteria as a transitory phenomenon, rather than the result of structural impediments. These include Cameroon (1997), Congo (in 2000 and 2006) and Ghana (2000).
Procedures for graduation from the least developed category

Graduation from the LDC category is a multi-year process involving different stages and multiple actors, thereby providing the country and its international partners with the time needed to adapt to its new status as a developing country and minimizing the risk of premature graduations. Though graduation does not depend on the Government’s consent, the process ensures that the views of the country are taken into consideration in the decision on the country’s graduation. The graduation procedures have evolved over time, shaped by General Assembly resolutions, specific requests by ECOSOC and guidelines and additional recommendations by CDP. Figure 1.7 summarizes the standard graduation process, with further explanations below.

First triennial review (year 0)

- During the preparatory meeting (known as the expert group meeting) of the triennial review (usually held in January), a subgroup of CDP reviews preliminary data for the LDC criteria and, among other tasks, identifies those that meet the graduation criteria for the first time. A country that has met the criteria in the past but not in the previous triennial review is considered to be meeting the criteria for the first time.
- During the triennial review, at the plenary meeting (usually held in late February), the full membership of CDP confirms the findings based on the final data for the LDC criteria. If a country is found to meet the graduation criteria for the first time, CDP takes the following steps:
  (a) Notifies the Government of its finding in writing;
  (b) Includes the finding in its report to ECOSOC;
(c) Requests the United Nations Conference on Trade and Development (UNCTAD) to prepare a succinct vulnerability profile and the Department of Economic and Social Affairs of the United Nations Secretariat (UN DESA) to prepare a succinct ex ante impact assessment to be used for the preparation of the graduation assessment, representing a consolidated United Nations voice and appraisal regarding graduation from the LDC category.

**Information gathering (years 0 to 3)**

- UNCTAD and UN DESA prepare the requested country analysis, in consultation with the country concerned and with other United Nations system entities:
  
(a) Vulnerability profiles are prepared by UNCTAD and are intended to (i) provide information on the country’s economic and development situation; (ii) compare the values of the indicators used in the CDP criteria with relevant national statistics; (iii) contain an assessment of the country’s vulnerability to the impacts of external economic and natural shocks, beyond the criteria of EVI; and (iv) indicate other structural features of the country that can be of relevance for the graduation decision (e.g., instability of remittances, dependency on tourism, high infrastructure costs due to geographical conditions and the impact of climate change);

(b) Ex ante impact assessments, prepared by UN DESA, examine the likely consequences of graduation from the LDC category. The impact assessment focuses on impacts related to the withdrawal, either upon graduation or after a transition period, of international support measures provided exclusively to LDCs in the areas of trade, development cooperation and participation in United Nations and other international forums (see chap. II). In preparing these assessments, DESA obtains inputs from development and trading partners and the United Nations system entities and other international organizations. The assessments incorporate comments received by the country concerned;

(c) Graduation assessments aim at representing a consolidated United Nations voice and appraisal regarding graduation. They contain succinct ex ante impact assessments and vulnerability profiles prepared by UN DESA and UNCTAD; an overall description of the country’s development prepared with the involvement of the United Nations country team; and forward-looking elements that could be considered for a smooth transition strategy. Independent from the succinct reports prepared as inputs towards the graduation assessments, both organizations could also prepare a more detailed report containing the findings of their research for the impact assessments and vulnerability profiles. These detailed findings could be posted on the CDP website and serve as a background document for CDP, officials at the country level and other stakeholders.

- The General Assembly and CDP have suggested that countries initiate preparations for a possible graduation early, particularly if graduation might have significant impacts. The Committee also encourages countries that have met the graduation criteria for the first time and their international partners to build knowledge and awareness of the graduation process and its impacts.

- The Committee secretariat and other relevant United Nations system entities are called upon to monitor the evolution of the country’s performance in relation to the graduation criteria and the new supplementary graduation indicators (see box I.2). The secretariat also shares preliminary data with the country in advance of the second triennial review, so as to resolve any data discrepancies. If a country is expected to meet the graduation criteria for a second time, the Govern-
ment is invited to present its views at the preparatory meeting for the second triennial review.

- The information gathering phase normally takes three years. However, in case CDP defers a decision on recommending the country for graduation, the phase is extended for an additional three years.

**Decision on graduation (year 3)**

- At the preparatory meeting for the triennial review (usually held in January), a subgroup of CDP reviews the preliminary data against the LDC criteria. If the subgroup confirms that the country meets the criteria for a second consecutive time, it considers the required additional information, that is to say, since 2021, the graduation assessment (including vulnerability profile and impact assessment) and the supplementary graduation indicators. The subgroup may also obtain information from relevant United Nations system entities, including the resident coordinator, who participate as observers in the preparatory meeting. Furthermore, it may also consider additional analysis. For example, in 2020, ECOSOC requested CDP to undertake a comprehensive study on the impact of the coronavirus disease (COVID-19) on the LDC category. The study assisted CDP in fully incorporating into the 2021 triennial review the impacts of COVID-19 on LDCs, including graduating countries. Figure I.8 illustrates the role of LDC criteria and additional information in the decision-making process.

- Importantly, CDP consults with the country concerned. For that purpose, it invites the Government of the country to share its views on a possible graduation at the preparatory meeting.

- After the preparatory meeting, the Government is invited to submit its views and any additional information it wishes to bring to the attention of CDP in writing, for consideration at the Committee’s plenary meeting.

- At the plenary meeting, the subgroup reports on its preliminary findings to the full CDP membership. Based on the analysis conducted by the subgroup and the written submission of the country, if the country has met the eligibility criteria for a second time, CDP may decide to recommend graduation. If it has serious concerns—for example, regarding the sustainability of the country’s development progress—it may decide not to recommend graduation. In such cases, it typically defers its decision to the subsequent triennial review. It may also request updates with respect to the additional information material so that it may assess the validity of its concerns at the subsequent triennial review. If the country has not met the criteria, no further action is taken other than reporting on this finding to ECOSOC.

- The Committee includes these decisions in its report to ECOSOC. If it recommends the country for graduation, it also includes a statement as to whether the standard three-year preparatory period is appropriate or whether specific factors would entail a longer period, not exceeding five years. Moreover, it includes suggestions for policy priorities and the type of international support needed to ensure a smooth transition out of the category. For this purpose, it draws on the additional information and the consultations with the country.

- ECOSOC endorses the recommendation through its annual resolution on the Committee’s report. The resolution is typically adopted in June or July, before the end of the ECOSOC cycle. In cases in which ECOSOC had been unable to find consensus on the recommendations, it has deferred the consideration to a later session, without further reference to CDP.
The General Assembly takes note of the recommendation by CDP to graduate a country in a resolution adopted at its first session following the endorsement by ECOSOC of the Committee’s recommendation. Hence, action by the Assembly can take place as early as mid-September of the year in which the second triennial review is conducted and as late as mid-September of the following year. The Assembly includes in its resolution the effective date of graduation.

The decision phase usually takes less than a year. Nevertheless, should ECOSOC defer the consideration of the recommendation, the phase can be extended.

Preparing for graduation (years 3 to 6)

- The graduating country is invited to prepare and start implementing a smooth transition strategy (see next section), as part of its overall development strategy.
- The graduating country is recommended to establish a consultative mechanism, in cooperation with its development and trading partners. The consultative mechanism should facilitate the preparation of the smooth transition strategy as well as the identification of associated actions and the negotiation of their duration and phasing out over an appropriate period of time. It is recommended that the consultative mechanism be integrated with other relevant consultative processes and initiatives. The country might request that the resident coordinator facilitates the consultative process.
• The United Nations system, led by the resident coordinator at the country level and the inter-agency task force at the international level, stands ready to provide assistance in the preparation of the smooth transition strategy.

• Development and trading partners participate in the consultative mechanism and support the smooth transition strategy. The General Assembly invites them to extend LDC-specific international support measures beyond the actual graduation date for a limited time, to phase out these measures in a gradual manner and to provide specific support for graduation (see next section and chap. II) with specific measures.

• The Committee monitors the country’s development progress and the preparation of the transition strategy, in consultation with the Member State and based on reports received from the country. It includes its findings in its annual reports to ECOSOC (see section on monitoring below for details).

• The standard length of the preparatory period is three years. The General Assembly may, however, grant a longer period. The preparatory period can also be extended by the Assembly during the course of the preparatory period, for example, in cases where the country is hit by a disaster or a severe external shock.

Effective graduation (year 6)

• The country begins its journey as a non-LDC from the date of its effective graduation, but there is no obligation for any action by the country itself.

• The country is no longer on the official list of least developed countries maintained by UN DESA.

Box I.2

**Supplementary graduation indicators**

In 2020, the Committee on Development Policy decided to introduce a set of supplementary graduation indicators as an additional element of the graduation framework. The supplementary indicators complement both the official LDC criteria and the country-specific information of the graduation assessment and vulnerability profile. They contain methodologically sound indicators covering most LDCs and other developing countries. The supplementary indicators are relevant for graduation but are not a requirement for graduation. Accordingly, there are no thresholds for the individual indicators and they are not aggregated into a single index or multiple indices.

The supplementary indicators serve several purposes:

• Cover vulnerabilities and relevant factors not adequately captured in LDC criteria
• Function as a screening device for identifying discrepancies between performance against the criteria and broader vulnerabilities and factors
• Serve as an entry point for identifying priorities and support needs for smooth transition
• Improve alignment with efforts to achieve the Sustainable Development Goals
• Enhance monitoring of graduated and graduating countries

After applying the supplementary indicators at the 2021 triennial review, CDP decided to keep those indicators under review and may, therefore, include adjustments for the 2024 triennial review. The current set and various visualizations are available on the CDP website at bit.ly/LDC-data.
Transition (year 6+)

- The country implements its smooth transition strategy.
- Development and trading partners extend or phase out their LDC-specific international support measures and provide specific support for graduation, in line with established procedures and the smooth transition strategy and in a predictable manner.
- The Committee continues to monitor the country’s development progress and the implementation of the transition strategy, in consultation with and based on reports received from the country. The monitoring is done on an annual basis for three years after graduation and then triennially thereafter, for two triennial reviews. The monitoring by CDP after graduation lasts for between seven and nine years, depending on the date of graduation.
- Certain LDC-specific support measures have a fixed transition period, within which graduated LDCs may continue to use such measures. In other cases, the length of an extension or provision of specific graduation support, if any, is determined by the provider of support on an ad hoc basis.

Figure I.9 contains an overview of actual graduation timelines. For more details, please see the country-specific information on the CDP website.

It is important to note that graduation from the LDC category is not equivalent to becoming a middle-income country nor to graduation from the concessional windows of multilateral development banks or from eligibility for official development assistance (ODA) (see box I.3). In fact, as of May 2021, 21 of the 46 LDCs are classified by the World Bank as lower-middle-income countries and one as an upper-middle-income country.

Box I.3
Graduation from the least developed country category vs. graduation from other categories of countries receiving international support measures

Graduation from the least developed country (LDC) category should not be confused with graduation from access to financing from multilateral development banks (such as graduation from the World Bank Group’s International Development Association (IDA)) or from eligibility for official development assistance (ODA). Most institutions include specific thresholds for gross national income (GNI) per capita as the main criterion for graduation. Table I.2 presents the GNI per capita thresholds of various support instruments, as well as the thresholds of the widely used analytical income categories. In addition to the thresholds, the figure contains basic information on other criteria and key exceptions. However, for a full picture of the eligibility criteria, the reader should refer to the information available through the sources provided. It should be highlighted that changes in classification typically occur after the respective thresholds have been exceeded for a certain number of years and often become effective after some preparatory or transition period. The widely used analytical thresholds of the World Bank occasionally serve the operational purposes of other providers. For example, both Canada and the European Union graduate countries from the list of beneficiaries of their Generalized System of Preferences scheme once they reach the upper-middle-income threshold according to the World Bank for a number of years.

Hence, depending on the country characteristics and additional criteria, countries may undergo several transitions, simultaneously or consecutively.

**Note:**

* Botswana's graduation process took place over a shorter time-frame as graduation procedures have changed over time.

** The General Assembly is scheduled to take a decision on the recommendation and the exact graduation date during its seventy-sixth session, i.e. between 14 September 2021 and 12 September 2022.
Preparing for graduation and the concept of “smooth transition”

The importance, in terms of the country’s development, of avoiding negative consequences due to graduation from the LDC category, for example from the loss of international support measures (see chap. II) was recognized early in the history of the LDC category and is reflected in the concept of “smooth transition” that is central to numerous General Assembly resolutions on LDC graduation (see previous section).

The General Assembly has called for integrating a country’s preparations for sustainable graduation and its smooth transition beyond graduation into that country’s long-term national sustainable development plans and development financing strategies, as appropriate, so as to diversify sources of

financing. It has called upon development and trading partners to extend LDC-specific support measures for an appropriate period of time, or phase them out gradually, as well as to provide targeted support throughout the entire graduation and smooth transition process. The General Assembly has also assigned specific responsibilities to the United Nations development system in order to support graduation.

In order to improve coordinated United Nations system-wide support to countries preparing for LDC graduation, in 2017 the United Nations system created an inter-agency task force on graduation and smooth transition, which is chaired by the Director of the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States. The task force is working closely with the resident coordinators’ offices and United Nations country teams, thereby ensuring linkages with and support to the Sustainable Development Cooperation Framework at the country level as well as with international financial institutions operating in-country. Its support is tailored to the unique needs of each LDC and includes the full mobilization and coordination of all parts of the United Nations system as well as mobilizing international support and resources, including partners from the global South to facilitate peer learning among graduating countries. For specific examples, see box I.4.

This section links activities to be undertaken by countries preparing for graduation to the process described in the preceding section (see figure I.10), and draws on the smooth transition strategy guidance note developed by UN DESA as the secretariat of the Committee for Development Policy. The guidance note is a direct response to several countries’ request for a template to follow in preparing a national smooth transition strategy. It is intended only as a guide and not as a blueprint. It guides the country to note the stages in the graduation process and timeline and where the country is encouraged to start the process of preparing a national smooth transition strategy (STS). A country’s national strategy will largely depend on the stage the country has reached in terms of the development context, goals and priorities and the graduation process.

Two main principles guide the STS process:

1. Country-led, country-owned and using existing country systems to the extent possible.
2. International community support is country-demand driven, timely and of high quality.

In addition, nine principles espoused in the 2030 Agenda for Sustainable Development (see General Assembly resolution 70/1, para. 74) and agreed to by Member States should also guide the STS process, given that the strategy is about preparing the country for its development process beyond graduation and towards sustainable development.

Box I.4

**Country-specific support provided by the inter-agency task force on graduation and smooth transition**

*Sao Tome and Principe* (2019-2021): provided collaborative support and contributed to the preparatory process for a smooth transition and graduation in 2024.

*Solomon Islands* (2019-2021): provided integrated support, including a joint country mission, and contributed elements for a smooth transition road map for the country, which is scheduled to graduate in 2024.

*Angola, Cambodia, Comoros, Djibouti, Senegal and Zambia* (2021): a key objective of the task force is to generate political awareness and support as well as enhanced understanding of the graduation process in a country, including among the private sector and civil society. Awareness-raising efforts have been initiated for those countries in close collaboration with and with support from the resident coordinator and country team.
The STS process involves nine key steps:

**Step 1: country meets the graduation criteria for the first time.** After CDP finds that the country has met the graduation criteria for the first time and the country has been notified by UN DESA, the country, through its Government, may start to consider its ownership and leadership role over the entire process in terms of what it will require to ensure its readiness to prepare and manage graduation out of the LDC category and the approach and specific measures required to ensure a smooth transition. That consideration is crucial and will include how the Government and national stakeholders are to substantively engage and contribute to the preparation of the analytical information described in the previous section. The country may wish to organize awareness-raising sessions at the local, subnational and national levels in order to have as wide as possible an understanding of what it means to sustainably graduate out of the LDC category.

**Step 2: Government initiates a country-led preparatory process for graduation from the least developed country category.** A Government-led dialogue based on whole-of-government policy leadership with key players from the private sector and non-governmental organizations can consider how best to integrate LDC graduation into its existing national plans, policies and medium-term budgetary frameworks and associated processes. It is essential to have strategic engagement with the international community, at the outset, and for the Government to clearly outline the support it will need throughout the graduation process.

**Step 3: use existing consultative mechanisms to facilitate the preparation of the strategy.** As much as possible, the country should consider utilizing existing national consultative mechanisms.
that have whole-of-government leadership structures and are inclusive. Only where no appropriate mechanism exists is the country encouraged to establish a new and dedicated consultative mechanism for LDC graduation and smooth transition. An existing or new mechanism needs to be integrated with other relevant consultative processes and initiatives between the country and its development and trading partners. The consultative mechanism could have two key components: (a) national and local stakeholders — government, think tanks, the private sector, civil society and other actors; and (b) international partners — bilateral, multilateral and regional partners, the private sector, philanthropies and international non-governmental organizations. Having a component of the mechanism dedicated to national and local consultations allows the voices and interests of different segments and groupings within the country to be heard and considered in preparing the strategy and in implementing the process.

Including bilateral and multilateral development and trading partners as members of the consultative mechanism enables the country to identify and negotiate graduation support prior to preparing a smooth transition strategy. The negotiations required could be conducted at the bilateral level if that is more conducive to the desired outcome than in the larger international consultative mechanism.

A country can call upon the United Nations system for it support through its country presence, namely the resident coordinator and the country team. Further support from the inter-agency task force on graduation and smooth transition is available, upon request.

**Step 4: prepare a country-led smooth transition strategy.** The General Assembly recommended that the national smooth transition strategy include a comprehensive and coherent set of specific and predictable measures that are in accordance with the priorities of the graduating country, while taking into account its own specific structural challenges and vulnerabilities as well as its strengths (see Assembly resolution 67/221, para. 7), and should be implemented as part of the overall development strategy.

In order to ensure that a country-owned smooth transition strategy is of high quality, it is important that a country considers the strategic objective of the strategy, the approach to developing and implementing the strategy, the key elements or features of the strategy and that it ensures an inclusive and participatory engagement process. Sufficient time should be spent on a thorough analysis of the impacts of graduation and on the identification of the mitigating measures that will be needed to transition smoothly beyond graduation. Those measures become the smooth transition measures once they are negotiated with and agreed by development and trading partners. The draft strategy should be shared with all stakeholders invited to the validation workshop, well in advance of the workshop. Sharing the draft strategy a month before, at a minimum, allows for in-depth comments and feedback to be provided, which may add value to the draft strategy, although this may vary from country to country. Based on the comments received, a revised draft strategy is prepared for validation by the Government and a wide and inclusive spectrum of stakeholders.

**Step 5: validate the draft strategy.** A whole-of-government, country-led validation workshop should be organized and facilitated through the consultative mechanism. The scope and number of days needed for the workshop would depend on whether the country’s strategy is being prepared as part of the formulation of a medium to long-term national development plan or as a separate document. It will also depend on the objectives of the workshop, as determined by the country.

**Step 6: Government endorses the smooth transition strategy.** The validated strategy should be endorsed by the Government so as to give it legitimacy as a prerequisite for its implementation and to garner support from the international community. Responsibility for the implementation of the
actions or specific measures recommended in the strategy is to be clearly assigned within the Government, with indicative time frames. Ideally, the strategy should be endorsed well in advance of the date on which graduation becomes effective. Implementation of the strategy should begin as soon as possible after its endorsement. Prompt implementation is particularly important if the Government needs to initiate negotiations with bilateral partners. Such aspects need to be considered by a graduating country when preparing its overall road map and timeline for a smooth transition, including the commencement date for the implementation of the strategy.

**Step 7: Launch the Smooth Transition Strategy.** The launch can be a stand-alone event or as part of a bigger event of which the strategy is a key component. It should be seen as the opportunity to promote the key messages underpinning the importance of a smooth transition beyond graduation that requires commitment by all.

**Step 8: Implement the Smooth Transition Strategy.** Countries are encouraged, as invited by the General Assembly, to implement the smooth transition strategy as part of their overall development strategy and to incorporate it into future policies and strategies and the action matrix of the Diagnostic Trade Integration Studies under the Enhanced Integrated Framework for Trade-Related Technical Assistance to Least Developed Countries (EIF) (see Assembly resolution 67/221, para. 11).

Furthermore, the recent reform of the United Nations development system provides an opportunity for seeking synergies with the common country assessment and the country’s United Nations Sustainable Development Cooperation Framework. Likewise, linkages can be identified with a country’s voluntary national review, Diagnostic Trade Integration Study, World Trade Organization (WTO) Trade Policy Review, its poverty reduction and growth strategy and its national development strategy. Elements of a smooth transition strategy can be incorporated into such documents, depending on the stage of development or implementation of each document.

The resources required for the implementation of the strategy could also be reflected in a country’s medium-term budget or fiscal framework, integrated national financing framework, development financing strategy and/or its external resource mobilization strategy, as well as being reflected by development and trading partners in their own multi-year funding mechanisms.

**Step 9: Monitor and Report on the Implementation of the Strategy.** If the country’s smooth transition strategy is well integrated into its national sustainable development plan and budget, then monitoring of the implementation of the strategy should also be embedded in the country’s monitoring and evaluation framework. Annual monitoring and reporting on the implementation of the strategy should form part of existing national and sectoral monitoring and reporting, as well as the country’s integral reporting requirements to CDP (see next section).

It is also useful for a country to develop a brief advocacy and communication strategy as a tool for higher levels of government to use in raising awareness, garnering support across the country and strengthening key partnerships for the implementation of the country’s smooth transition strategy beyond graduation.

There is no specified length for the duration of the transition. The strategy should be formulated and implemented based on a time frame that responds to the country’s specific needs and characteristics.

Importantly, there is no specified format for the transition strategy. Among graduated and graduating countries, approaches to preparing a smooth transition strategy vary from country to country, see figure I.11.

Box I.5 lists some additional resources on graduation and smooth transition.
Figure I.11

Select country approaches to a smooth transition strategy

**VANUATU**
Established a National Coordinating Committee on LDC Graduation that is inclusive of the private sector and civil society and linked to the existing government decision-making mechanism. The Committee identified what was required to address the negative impacts of the loss of LDC-specific support measures, identified those already included in the country’s long-term national strategic plan (2016-2025) and sector policies and 24 specific measures to be reflected in the country’s smooth transition strategy as a separate document. Vanuatu also made an early start with implementation of its smooth transition strategy, months before its effective graduation out of LDC category.

**BHUTAN**
Aligned its preparation for graduation in 2023 and its smooth transition measures to its planning cycle and incorporated economic diversification, job creation and addressing climate-related vulnerabilities as priority areas in its twelfth National Development Plan, to ensure it graduates with a strong resilient economy. The role of the private sector and the importance of pursuing economic diplomacy to explore mutually beneficial bilateral and multilateral partnerships are emphasized. Bhutan has also developed a smooth transition strategy in 2021 for implementation during the transition period.

**SAMOA**
Decided that the best transition strategy following graduation would be to ensure that it was able to fully implement its national development strategy. It integrated the issue of graduation into the Strategy for the Development of Samoa (SDS 2016-2020) as well as into its efforts in relation to the Sustainable Development Goals, the Samoa Pathway, the Paris Agreement and the Sendai Framework for Disaster Risk Reduction 2015–2030.

**CABO VERDE**
Set up a donor support group (Grupo de apoio à transição) to prepare a transition strategy to adjust to the phasing out of the support measures associated with LDC membership, as well as a Budget Support Group composed of Government entities and multilateral and bilateral donors to align and harmonize donor support around the Growth and Poverty Reduction Strategy.

---

**Box I.5**

**Resources on graduation and a smooth transition out of the least developed country category**

- United Nations, Department of Economic and Social Affairs, “LDCs at a glance: graduated country fact sheets”.
- LDC Portal (International Support Measures Portal for Least Developed Countries): an online portal maintained by the secretariat of CDP that contains information on LDC-specific international support measures, including on any smooth transition mechanisms. The portal was created to improve the capacity of LDCs to gain access to and benefit from the international support measures adopted by the international development community.
- Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (2017), “A guide to least developed country graduation”.
- The Least Developed Countries Report 2016 – The path to graduation and beyond: making the most of the process (UNCTAD) addresses graduation and smooth transition, including the experience of graduates.
- General Assembly resolutions 59/209 of 20 December 2004 and 67/221 of 21 December 2012, both entitled "Smooth transition for countries graduating from the list of least developed countries".
Monitoring and reporting during the transition

At the request of ECOSOC and the General Assembly, CDP monitors:

a. the development progress of countries that are in the process of graduating from the LDC category, on an annual basis;\(^8\)

b. the development progress of graduated countries, in consultation with the respective Governments, on an annual basis for three years after graduation and triennially thereafter, coinciding with the two subsequent triennial reviews.\(^9\)

In the monitoring exercise, CDP considers information it receives from the countries, which have been invited by the General Assembly to report to the Committee on the preparation and implementation of their transition strategy.\(^10\) The monitoring allows CDP to bring any signs of deterioration in the development progress of the concerned country to the attention of ECOSOC.\(^11\)

Table I.3 summarizes the current reporting and monitoring schedule for graduating and newly graduated countries.

The guidelines on reporting requirements for a smooth transition from the least developed country category, developed by the Committee in 2013 and which built on the relevant General Assembly resolutions and earlier guidelines and were endorsed by ECOSOC,\(^12\) made the following recommendations regarding reporting:

Table I.3

| Reporting and monitoring on transition out of the least developed country category |
|---|---|---|---|
| | Before graduation | After graduation |
| | | First three years | Following six years |
| Graduating/ | Invited to report annually to CDP on the preparation of the transition strategy | Invited to report annually to CDP on the implementation of the transition strategy | Invited to report to the CDP every three years (before the triennial review) |
| graduated country | | | |
| CDP | Monitors development progress and reports to ECOSOC | Monitors development progress in consultation with the graduated country and reports annually to ECOSOC | Monitors development progress in consultation with the graduated country as part of the triennial reviews |

Source: General Assembly resolutions 59/209 and 67/221; Economic and Social Council resolutions 2008/12 and 2013/20; and report of the Committee for Development Policy on its fifteenth session (18–22 March 2013) (Official Records of the Economic and Social Council, 2013, Supplement No. 13 (E/2013/33)).

**Reporting by graduating countries on the preparation of the transition strategy:**

- Countries should submit their reports to CDP before 31 December for the first three years after the General Assembly has taken note of the CDP recommendation for the country to graduate.
- Reports should include a summary of progress achieved in the setting up of a consultative mechanism (including information on participants, meetings convened and their objectives

---

\(^9\) General Assembly resolutions 59/209 and 67/221.

\(^10\) General Assembly resolution 67/221.

\(^12\) See E/2013/33, chap. V, and Economic and Social Council resolution 2013/20.
and outcomes, support by United Nations institutions in convening the meetings); identification of the LDC-specific support measures most relevant to the country and corresponding details about the level of commitments made by development and trading partners in maintaining or phasing out those measures; information on the preparation of the transition strategy (key issues to be addressed, measures taken or to be taken by the country, decisions made and pending actions); and the latest version of the smooth transition strategy.

**Reporting by graduated countries:**
- The report should include an overview of progress made in implementing the smooth transition strategy and information on whether the measures by the Government of the graduated country and the commitments by its development and trading partners identified in the transition strategy are being fulfilled.
- In cases where support is being reduced or withdrawn, the report should indicate how this is affecting the country. This would assist CDP in its assessment and enable it to bring any negative effects to the attention of ECOSOC as early as possible.

**Reports by the Committee:**
- Reports by CDP on graduating and graduated countries contain a review of a selected set of indicators and other relevant country-specific information with the purpose of assessing any signs of deterioration in the development progress of the country; and a review of the information provided by the country on the preparation or implementation of the transition strategy.
- In the case of graduated countries, before finalizing its report to ECOSOC, the Committee, through its secretariat, consults with the New York-based representative of the graduated country to the United Nations about the conclusions of its draft report, so that the Government’s views can also be considered by the Committee in its final report to ECOSOC.

Monitoring reports on graduating and graduated countries can be found on the CDP website at [https://bit.ly/LDC-monitoring](https://bit.ly/LDC-monitoring). The Committee has found the current monitoring system to be ineffective. It received only seven reports from monitored countries, out of 33 invitations sent in line with the relevant resolutions and guidelines. CDP has identified three main factors that limit the incentives for countries to participate in the monitoring:
- The current monitoring mechanism is conducted only once a year, just prior to the plenary meeting of the Committee.
- In case of a crisis, no immediate response can be organized.
- Support and mitigating measures, including General Assembly resolutions on extending the preparatory period, are not linked with the outcomes of the monitoring.

In response to those shortcomings, CDP is currently developing an improved monitoring mechanism, including a crisis response process. ECOSOC has called upon Member States and relevant United Nations system entities to support these efforts. Hence, future monitoring and reporting may follow a slightly different and more effective mechanism than the one described in this section. Details will be made available at [http://bit.ly/CDP-LDCs](http://bit.ly/CDP-LDCs).

---

13 See E/2021/33, chap. VI.
International support measures for the least developed countries

Introduction

Countries belonging to the least developed country (LDC) category have access to support measures beyond those available for other developing countries. These measures can be grouped into three main areas: international trade; development cooperation; and support for participation in international forums. The sections below present an overview of the main support measures in each of these areas. More detailed information on international support measures for LDCs can be found on the LDC Portal (www.un.org/ldcportal).

Trade-related support measures

Trade-related international support measures aim at supporting the integration of LDCs into the global economy. They are framed by commitments set out in World Trade Organization (WTO) ministerial declarations and decisions as well as by internationally agreed commitments as part of global development agendas, such as the 2030 Agenda for Sustainable Development and the successive programmes of action for LDCs (see chap. I, figure I.4). The main categories of trade-related support measures for LDCs are:

a. Preferential market access for goods;

b. Preferential treatment for services and service suppliers;

c. Special treatment regarding obligations and flexibilities under WTO rules;

d. Special treatment regarding obligations and flexibilities under regional agreements;

e. Trade-related technical assistance and capacity-building.

Preferential market access for goods

Most major trading partners provide duty-free, quota-free (DFQF) market access or preferential tariffs and preferential rules of origin for products imported from LDCs. Box II.1 contains information

1 The authors are grateful for the input of the World Trade Organization (WTO) secretariat, provided without prejudice to the position of WTO members.

2 Important references on the subjects covered in this section are United Nations Conference on Trade and Development (UNCTAD), Handbook on Duty-Free and Quota-Free Market Access and Rules of Origin for Least Developed Countries: Part I–Quad Countries (UNCTAD/ALDC/2015/5 Part I) and Handbook on Duty-Free and Quota-Free Market Access and Rules of Origin for Least Developed Countries: Part II–Other Developed Countries and Developing Countries (UNCTAD/ALDC/2018/5, Part II); and the annual note prepared by the WTO secretariat for the WTO Sub-Committee on Least Developed Countries, Note by the Secretariat on market access for products imported from LDCs, (the note issued in October 2020 is document WT/COMTD/LDC/W/68). WTO documents are available at https://docs.wto.org/.
on the main milestones in the development of LDC-specific preferential market access for goods. Giving certain countries preference over others violates the most-favoured-nation (MFN) principle that underpins the multilateral trading system, so specific provisions have been put into place to enable these preferences to be given to developing countries, with special treatment for LDCs. It is important to note that LDCs do not need to be members of WTO to benefit from preferential market access granted by other countries.

<table>
<thead>
<tr>
<th>Milestones in preferential market access for goods exports from least developed countries</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The Enabling Clause, 1979.</strong> The granting of non-reciprocal preferential market access to developing countries was initially made possible with the adoption, in 1971, of a temporary waiver from the obligation contained in article 1 of the General Agreement on Tariffs and Trade (GATT) to grant most-favoured-nation (MFN) treatment to all contracting parties. In 1979, the decision on “Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries” (known as the “Enabling Clause”) allowed derogations to MFN treatment on a permanent basis. It enabled developed country members of GATT to give differential and more favourable treatment to the exports of developing countries and to grant special treatment to LDCs in the context of any measure in favour of developing countries. The Enabling Clause forms the legal basis for the Generalized System of Preferences that covers the trade preferences schemes of most developed countries for developing countries, and within which many countries also have sub-schemes with further preferences for LDCs.</td>
</tr>
<tr>
<td><strong>Decision on Waiver, 1999.</strong> Developing country WTO members were allowed to extend preferential market access to LDCs through the adoption of a special waiver in 1999. The waiver was initially granted for 10 years and has since been extended on several occasions, most recently to 2029.</td>
</tr>
<tr>
<td><strong>Decisions on duty-free, quota-free market access since 2001.</strong> Market access initiatives for LDCs gained momentum with the Third United Nations Conference on the Least Developed Countries, held in Brussels in 2001, and with the launch of the Doha round of trade negotiations at the World Trade Organization (WTO). At the Sixth Ministerial Conference of the World Trade Organization, held in Hong Kong, China, in 2005, WTO members committed to further improving market access conditions for LDCs. Developed countries and developing countries in a position to do so committed to providing duty-free, quota-free (DFQF) market access on a lasting basis for all products originating from all LDCs. Members experiencing difficulties in making that commitment agreed to provide DFQF market access on at least 97 per cent of products imported from LDCs, defined at the tariff line level. Further commitments were made in the ministerial decision on duty-free and quota-free market access for least developed countries, adopted at the Ninth Ministerial Conference, held in Bali, Indonesia, in 2013. A specific decision on market access for cotton was taken at the Tenth Ministerial Conference, in Nairobi, in 2015.</td>
</tr>
<tr>
<td><strong>Decisions on preferential rules of origin since 2013.</strong> Following a call for simple and transparent rules of origin for LDCs, as set out in the Hong Kong Ministerial Declaration, in 2005, a decision adopted at the Ninth Ministerial Conference, in Bali in 2013, contained multilaterally agreed guidelines to help make it easier for LDC exports to qualify for preferential market access. At the Tenth Ministerial Conference, held in Nairobi in 2015, another decision provided more detailed directions on specific issues, including the consideration of inputs from different sources (cumulation), the determination of substantial transformation, the use of non-originating materials, and simplified documentary and procedural requirements. The Committee on Rules of Origin of WTO reviews developments in preferential rules of origin applicable to imports from LDCs on an annual basis and reports thereon to the General Council.</td>
</tr>
</tbody>
</table>
**Duty-free, quota-free market access and preferential tariffs**

Most developed countries grant either full or nearly full DFQF market access to LDCs, and an increasing number of developing countries have extended DFQF market access to a significant number of products from LDCs (see table II.1). In some cases, access to DFQF arrangements is contingent on the fulfilment of certain conditions additional to LDC status such as, in the case of the Everything But Arms initiative of the European Union, the non-violation of principles laid down in human rights and labour rights conventions. Table II.1 summarizes the main multilateral non-reciprocal LDC preference schemes in place. The WTO database on preferential trade arrangements contains detailed information for each WTO member providing or benefiting from these arrangements. In addition, the South Asian Free Trade Area (SAFTA) and Asia-Pacific Trade Agreement (APTA) grant greater preference (coverage and tariff margins) to LDC members (see section on special treatment under regional agreements).

The practical significance of preferential market access schemes depends on the country’s productive capacities, type of export products and the existence of other preferential trading arrangements. Figure II.1 shows the distribution of imports utilizing LDC-specific benefits, covering the 10 schemes with the highest utilization. Based on the latest available data, merchandise products with a value of more than 45 billion are benefiting from LDC-specific schemes each year, with the European Union being by far the largest market.

Source: Adapted from WTO, note by the secretariat on market access for products and services of export interest to least developed countries, 23 October 2020 (document WT/COMTD/LDC/W/68); complemented with information from the WTO preferential trade arrangements database (ptadb.wto.org), accessed 16 May 2021. The original table also refers to two arrangements of the United States of America that benefit several LDCs but not based on their LDC status: a special scheme for Haiti, the only LDC in the Americas, within the Caribbean Basin Trade Partnership Act; and the African Growth and Opportunity Act (AGOA), which grants duty-free, quota-free access to 97 per cent of tariff lines to eligible sub-Saharan African countries, including several LDCs.

There are several reasons why not all imports from LDCs are utilizing LDC-specific preferential schemes. Some export products of LDCs are already subject to zero MFN tariffs in the most significant markets, or the exporting country may have access to other, non-LDC specific preference regimes such as the African Growth and Opportunity Act (AGOA), in the United States of America, for African LDCs, Economic Partnership Agreements between the European Union and several countries in Africa, or regional trading arrangements such as the Association of Southeast Asian Nations (ASEAN) Free Trade Area. Exporters in LDCs may also have difficulty in fulfilling the requirements to determine compliance with the preferential rules of origin.
**Preferential rules of origin for goods**

Rules of origin are the criteria used to define whether a product is considered to originate in a certain country and thereby whether it can benefit from preferential market access. Whereas for some products the determination of origin is straightforward, for others, particularly those produced through global value chains, rules of origin determine the extent to which a product needs to be produced in a certain country in order to be eligible for preferential treatment.

Strict rules of origin can be a barrier to utilizing preferential market access. In recognition of this, and particularly since the WTO Ministerial Conferences held in Bali and Nairobi in 2013 and 2015, respectively (see box II.1 above), in some markets, LDCs benefit from less stringent rules of origin. For example:

- In the European Union, since 2011, the general threshold for non-originating materials is 70 per cent for LDCs and 50 per cent for other Generalized System of Preferences (GSP) beneficiaries; and product-specific origin requirements are more lenient. In textile and apparel products, the rules of origin permit single-stage processing for LDCs while for developing countries they require double transformation.

- In the United States, an article produced in an LDC beneficiary of its GSP may count inputs from least developed and other beneficiary countries in its regional association towards the 35 per cent domestic content requirement for satisfying the rules of origin on certain articles.

- In Canada, up to 60 per cent of import content is allowed for the product to benefit from the LDC tariff, as opposed to 45 per cent for non-LDC products to benefit from the general preferential tariff. In addition, all beneficiaries of the LDC preferential tariff are regarded as one single area for cumulation purposes, while all beneficiaries of the general preferential tariff are regarded as a single area. There are special rules in place for LDCs regarding textiles and clothing.

- The United Kingdom has less stringent rules of origin for LDCs on a number of products, similar to those of the European Union.

There are also LDC-specific rules of origin under regional agreements. For example, under the South Asian Free Trade Area (SAFTA), the general criteria are change of tariff heading plus 30 per cent for LDCs as opposed to 40 per cent for non-LDCs. Under the Asia-Pacific Trade Agreement (APTA), the value-addition threshold for LDCs is 35 per cent as opposed to 45 per cent for non-LDCs, and regional cumulation is allowed where the regional value addition is 50 per cent for LDCs as opposed to 60 per cent for non-LDCs.

**What happens to least developed country-specific preferential market access for goods upon graduation?**

Upon graduation, and after any applicable transition periods, countries are no longer eligible for LDC-specific preferential market access arrangements. In developed country markets, countries that have graduated from the LDC category will normally become beneficiaries of standard GSP schemes. LDC-specific rules of origin no longer apply. In developing country markets, graduated countries may

---

4 In the European Union, this does not apply to countries that have preferential market access through free trade agreements, such as Economic Partnership Agreements, or to countries classified as upper-middle-income countries. Similar exceptions apply elsewhere. Canada excludes upper-middle-income countries from its Generalized System of Preferences scheme.
continue to have preferential market access only if they are members of regional or bilateral trade agreements but no longer have access to non-reciprocal preferential market access schemes.

The Everything But Arms initiative in the European Union contains a smooth transition provision, which automatically grants an additional period of eligibility. In other countries, some graduated countries have been able to maintain preferential treatment for a period after the date of graduation even though there are not automatic smooth transition provisions (see table II.2). The General Assembly, in its resolution 67/221, invited trading partners that have not established procedures for extending or phasing out preferential market access, inter alia, duty-free and quota-free treatment, to clarify in a predictable manner, as a general measure or at the consultative mechanism, their position with regard to the extension of the least developed country-specific preferences, the number of years of the extension or the details concerning the gradual phasing out of the measures (see chap. I, section on procedures for graduation).

The European Union, the United Kingdom and Norway have non-reciprocal preferential market access schemes that lie, in terms of coverage, in between the LDC-specific ones and the standard GSP. The Special Arrangement for Sustainable Development and Good Governance (GSP+) in the European Union grants duty-free access to most of the products covered by the standard GSP. Eligibility for GSP+ requires the ratification and implementation of 27 conventions on human rights, labour rights, environmental protection and good governance, and meeting certain vulnerability criteria. The United Kingdom’s enhanced framework within its GSP has similar terms. Norway’s GSP+ scheme grants duty-free access for all industrial goods and higher preferences on a number of agricultural goods in comparison with standard GSP beneficiaries. All lower-middle-income countries with populations of less than 75 million and low-income countries are eligible for GSP+.

In 2020, the LDC Group at WTO submitted a draft proposal for a ministerial decision that would establish a smooth transition mechanism for graduating LDCs under the WTO system. The proposal was under consideration by members as the present publication went to press.

5 The Generalized System of Preferences scheme of the European Union, including the Everything But Arms initiative and the Special Incentive Arrangement for Sustainable Development and Good Governance (GSP+), are under review at the time of writing, with a new regulation expected to apply from 1 January 2024.

6 WTO, “Trade-related challenges of the least developed countries and way forward: a draft for MC decision”, document WT/GC/W/807.
Preferential treatment for services and service suppliers

The Eighth Ministerial Conference of WTO, held in Geneva in 2011, adopted the decision on preferential treatment to services and services suppliers of LDCs, also known as the “LDC services waiver”. The LDC services waiver, which at the time of writing was valid until December 2030, allows WTO members to grant LDCs market access preferences and other preferential measures by exempting them from the obligation of extending equal treatment to all members (MFN principle). WTO has received 24 notifications (from 23 countries and the European Union), indicating sectors and modes of supply where they were providing or intended to provide preferential treatment to LDC services and service suppliers.

What happens to least developed country-specific preferential market access for services upon graduation?

Upon graduation, countries are no longer eligible for preferential treatment under the services waiver. However, graduating LDCs can request preference-granting WTO members to extend the LDC benefits for a certain period. An extension of such preferential treatment would require a special waiver, to which members would need to agree. However, a recent study found that the services waiver has not yet generated the desired impacts and that graduating LDCs are unlikely to lose much in services preferences after graduation.7

Special treatment regarding obligations and flexibilities under World Trade Organization rules

As of May 2021, 35 of the 46 countries included in the list of LDCs were WTO members, while 8 others were in the process of acceding (see table II.3). LDCs that are members of WTO benefit from special considerations in their implementation of WTO agreements. Special and differential treatment provisions for LDCs aim principally to facilitate compliance with WTO rules in view of the limited institutional capacities of LDCs; to protect their policy space; and to support them in increasing their participation in international trade by addressing supply-side constraints and supporting trade-related elements of development strategies. LDCs that are not members of WTO benefit from support for the accession process (see box II.2).

Table II.4 provides an overview of the main provisions that are currently applicable.8 Some of these provisions are applicable only to those LDCs that were founding members of WTO, and some applied only for certain time periods after the entry into force of the various WTO agreements. LDCs that are newly acceded WTO members have in some cases waived their access to LDC-specific support measures in the negotiations with other WTO members on their accession packages. In addition to the provisions listed in table II.4, there are also a number of references within agreements and decisions whereby WTO members commit to taking the needs of LDCs into account, to ensuring capacity-building for LDCs in the fulfilment of their commitments as members of WTO, and to furthering their participation in world trade.

In addition to special and differential treatment provisions under the WTO agreements and related decisions, there are measures to support LDCs within WTO. Discussions in the Subcommittee on the Least Developed Countries follow the work programme for the LDCs, which covers systemic

</table>
| **Agreement on Agriculture** | LDCs and net food importing developing countries may provide certain export subsidies until the end of 2030 (article 9.4, most recent extension in G/AG/5/Rev.10)  
Longer repayment periods for export financing support (WT/MIN(15)/45-WT/L/980)  
Less frequent notifications to WTO regarding domestic support (G/AG/2) |
| **Sanitary and Phytosanitary (SPS) Measures** | Priority for technical assistance (article 9.1). The Standards and Trade Development Facility (STDF) has a target of dedicating at least 40% of total project financing allocated to LDCs or Other Low-Income Countries (STDF Operational Rules)  
Lower co-financing requirement for technical assistance. Beneficiaries from LDCs and OLICs contribute at least 10% of the requested STDF contribution to a project, as opposed to 20% for lower-middle-income countries and 60% for upper-middle-income countries (STDF Operational Rules) |
| **Agreement on Subsidies and Countervailing Measures** | LDCs (and other countries with GNI per capita below $1,000 in constant 1990 dollars) are exempted from the prohibition of export subsidies (article 27.2 and Annex VII of the Agreement and paragraph 10.1 of the Doha Ministerial Decision on Implementation-Related Issues and Concerns (WT/MIN(01)/17)) |
| **Trade Facilitation Agreement (TFA)** | Longer notification time frames: until 22 February 2020 for category B measures; until 22 February 2021 for indicative dates and definitive dates; by 22 August 2022 for category C measures (articles 15 and 16)  
Longer deadlines under the early warning mechanism, in case an LDC has difficulties in implementing categories B and C measures (article 17)  
Longer time frame (4 years rather than 18 months) for new implementation dates for measures shifted from category B to category C before approval from the Trade Facilitation Committee is required (article 19)  
Longer grace period from dispute settlement (until 22 February 2023 for category A measures, and 8 years from the date of implementation of category B or C measures (article 20) |
| **Trade-Related Aspects of Intellectual Property Rights (TRIPS)** | Exemption from applying all substantive TRIPS standards until 1 July 2021. There have been extensions to this deadline (article 66.1, latest extension IP/C/64)  
Exemption from providing protection for pharmaceutical patents, from providing the possibility of filing mailbox applications and from granting exclusive marketing rights (IP/C/73 and WT/L/971)  
Waiver from notification requirements for issuing compulsory licenses for exports of pharmaceutical products to LDCs or other countries with insufficient manufacturing capacities in the pharmaceutical sector (article 31 bis) |
| **Dispute Settlement Understanding** | LDCs can request the Director-General of the WTO or the Chairman of the Dispute Settlement Body to provide their good offices, conciliation and mediation for settling disputes (article 24)  
Free legal advice from the Advisory Center on WTO Law (ACWL) (article 27.7) |
| **Trade Policy Review Mechanism** | LDCs may have a longer period between trade policy reviews than other countries (Annex 3) |

**Source:** CDP secretariat, based on the texts of WTO agreements and decisions and information provided by the WTO secretariat.
What happens to least developed country-specific special and differential treatment under World Trade Organization rules upon graduation?

Graduating LDCs have the possibility to request waivers at WTO that provide them with transition periods to phase out flexibilities or phase in obligations. Such waivers must be negotiated with members. Specific attention can be sought in WTO committees regarding difficulties encountered in the implementation of any agreement. Because WTO is a member-driven organization, such negotiations require active engagement by the graduating LDCs in WTO committees, as well as in bilateral discussions. Graduated LDCs still benefit from a range of special and differential treatment provisions that apply to all developing members.\(^9\)

As mentioned above, a draft proposal by the LDC Group for a ministerial decision to establish a smooth transition mechanism for graduating LDCs under the WTO system was under consideration by members as the present publication went to press.

Special treatment regarding obligations and flexibilities under regional agreements

Certain regional trade agreements contain special provisions for LDCs in addition to the preferential tariffs and rules of origin mentioned above:

- In the South Asian Free Trade Area (SAFTA) (Afghanistan, Bangladesh, Bhutan, Maldives, Nepal, India, Pakistan and Sri Lanka), among other measures, LDCs benefit from smaller sensitive lists adopted by some of the partners (meaning they receive tariff concessions on a larger number of products) and preferential rules of origin (requirement of change of tariff heading and value addition of 10 per cent less than the requirement for non-LDCs).\(^10\) The SAFTA agreement contains a special provision for Maldives (article 12), which graduated from the LDC list in 2011, granting it LDC-equivalent treatment in the Agreement and in any subsequent contractual undertakings;

---

10. For more details, see https://un.org/ldcportal/.
• The Asia Pacific Trade Agreement (APTA) (Bangladesh, China, India, Lao People’s Democratic Republic, Mongolia, Republic of Korea and Sri Lanka): LDCs benefit from larger lists of tariff concession items as well as deeper tariff concessions (higher margin of preference for market access) in some of the partners and have additional flexibility in rules of origin (domestic value requirement of 35 per cent instead of 45 per cent);\(^\text{11}\)

• The Pacific Agreement on Closer Economic Relations (PACER) Plus: while tariff reduction by non-LDCs started from the date of entry into force (13 December 2020), tariff reduction by LDCs will start after each country’s graduation from the LDC category or after 10 years, whichever is later; and tariff elimination will take up to 25 years or more.\(^\text{12}\)

• The African Continental Free Trade Area Agreement (AfCFTA), whose implementation commenced on 1 January 2021, draws a distinction between LDCs and non-LDCs for the tariff negotiations. LDCs have 10 years to achieve 90 per cent liberalization, while non-LDCs have 5 years. The remaining 10 per cent of tariff lines is divided into two categories: 7 per cent can be designated sensitive products and 3 per cent of tariff lines can be excluded from liberalization entirely. LDCs have 13 years to eliminate tariffs on sensitive products and may maintain their current tariffs for the first 5 years, backloading liberalization during the remaining 8 years. Non-LDCs have 10 years to eliminate tariffs on sensitive products and may also retain the status quo, starting liberalization in year 6. Both LDCs and non-LDCs may exclude 3 per cent of tariff lines, but the excluded products may not account for more than 10 per cent of their total trade.\(^\text{13}\)

Trade-related technical assistance and capacity-building

A number of mechanisms are in place to support LDCs through technical assistance and capacity-building related to trade.

• The Enhanced Integrated Framework (EIF), an Aid for Trade mechanism dedicated specifically to LDCs and recent graduates, supports LDCs through analytical work, institutional support and productive capacity-building projects (see next section for more details);

• The WTO secretariat provides technical assistance on the issues covered by WTO agreements and on accession. LDCs benefit from specific courses that address their needs, are entitled to participate in a greater number of national activities per year than other developing countries and are the main beneficiaries of WTO and mission internship programmes. Several WTO agreements contain provisions on technical assistance to LDCs. For example:
  - LDCs have priority in technical assistance delivered by WTO members and the secretariat under the Agreement on the Application of Sanitary and Phytosanitary Measures. The Standards and Trade Development Facility (STDF) has a target of allocating at least

---

\(^{11}\) For more information, see Economic and Social Commission for Asia and the Pacific, “Asia-Pacific Trade Agreement (APTA)”.

\(^{12}\) As at mid-2021, eight parties have ratified the agreement. These are Australia, the Cook Islands, Kiribati, New Zealand, Niue, Samoa, Solomon Islands and Tonga. The other 3 signatories, i.e., Nauru, Tuvalu and Vanuatu, had not ratified the agreement.

For more information, see Australia, Department of Foreign Affairs and Trade, Pacific Agreement on Closer Economic Relations Plus, “Trade in goods”.

\(^{13}\) See Trudi Hartzenberg, “The African Continental Free Trade Area Agreement: what is expected of LDCs in terms of trade liberalisation?”, August 2019; and Gerhard Erasmus and Trudi Hartzenberg, “Trade under AFCFTA Rules started on 1 January 2021, but hard work lies ahead”, blog, 10 February 2021.
40 per cent of total project financing to LDCs or other low-income countries (OLICs). There is also a lower co-financing requirement for technical assistance. The minimum required contribution from LDCs and OLICS is 10 per cent, as opposed to 20 per cent for lower-middle-income countries and 60 per cent for upper-middle-income countries.

- Provisions under the WTO agreement state that the WTO secretariat shall make available technical assistance on request to developing country members, and in particular to the least developed country members, as part of the preparation of the Trade Policy Reviews.
- A Trade Facilitation Agreement Facility has been created to deliver support to LDCs and developing countries so that they may fully benefit from the Trade Facilitation Agreement.
- LDCs are to be given priority in technical assistance under the Agreement on Technical Barriers to Trade.

Moreover,
- “China’s LDCs and Accessions Programme”, facilitates the participation of LDCs in WTO discussions and builds capacity for accession negotiations.
- The ePing notification alert system of UN DESA, WTO and International Trade Centre (ITC) (https://www.epingalert.org) provides countries with timely access to notifications under the WTO Agreement on the Application of Sanitary and Phytosanitary Measures (SPS) and the WTO Agreement on Technical Barriers to Trade (TBT) and facilitates dialogue among the public and private sector in addressing potential trade problems at an early stage. It is available to all countries but especially geared towards meeting the needs of LDCs.

- The Advisory Centre on WTO Law provides legal advice on issues related to WTO, WTO dispute settlement support and capacity-building, and LDCs do not have to join as members in order to benefit from its services.
- ITC works to build the capacity of private actors in LDCs so they can take advantage of the global trading system.

**Development cooperation**

As developing countries, LDCs are recipients of official development assistance (ODA) and other forms of development cooperation provided by bilateral donors and multilateral institutions, and participate in South-South cooperation. Most development cooperation is not contingent on a country being an LDC. However, the policies of some donors and institutions give priority or more concessional terms to LDCs and there exist a number of mechanisms dedicated exclusively to LDCs.14

---

14 The CDP Comprehensive Study on the Impacts of COVID-19 on the Least Developed Country Category and the study on United Nations Support to the Least Developed Countries, prepared by the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States include a description of assistance measures for LDCs that had been provided by early 2021 to respond to the COVID-19 pandemic, though these measures were in general not LDC-specific.
This section refers to the main provisions for LDCs in bilateral and multilateral cooperation. For a more detailed catalogue of measures, please see the LDC Portal (https://un.org/ldcportal).

**Commitments in bilateral official development assistance flows to least developed countries**

The definition of ODA used by the Development Assistance Committee (DAC) of the Organisation for Economic Co-operation and Development (OECD) is “government aid designed to promote the economic development and welfare of developing countries”.\(^{15}\) ODA includes grants, “soft” loans and the provision of technical assistance, and can be provided bilaterally, from donor to recipient, or channelled through multilateral organizations such as the United Nations or the World Bank. LDCs received 24 per cent of total ODA disbursed by DAC countries in 2018-2019.\(^{16}\) ODA represents an important—in some cases critical—component of external financing in LDCs.

All developing countries, until they exceed the high-income threshold determined by the World Bank for three consecutive years, are eligible for ODA, but special quantitative and qualitative commitments have been made by providers of ODA in regard to LDCs.\(^{17}\)

**Quantitative commitments on official development assistance by donors**

The 2030 Agenda for Sustainable Development, the Addis Ababa Action Agenda of the Third International Conference on Financing for Development and the Programme of Action for the Least Developed Countries for the Decade 2011–2020 all reiterate long-standing commitments by developed countries to provide the equivalent of 0.15 to 0.20 per cent of their gross national income (GNI) in the form of ODA to LDCs. This is in parallel to a commitment to provide the equivalent of 0.7 per cent of GNI in ODA to developing countries. Individual countries and the European Union have made additional commitments with regard to the allocation of aid to LDCs.

In 2019, 5 of the 29 DAC countries fulfilled the commitment of providing the equivalent of 0.15 per cent to 0.20 per cent of GNI as ODA to LDCs (see figure II.2). Overall, ODA flows from DAC countries to LDCs were equivalent to 0.09 per cent of GNI of the group of donors, while flows to developing countries were equivalent to 0.32 per cent. Between 14 and 45 per cent of DAC countries’ total ODA went to LDCs (figure II.3).\(^{18}\)

**What happens to volumes of bilateral aid after graduation?**

With regard to graduation, it is important to note that the commitments by donors refer to their aggregate flows to LDCs, and not to flows to individual countries. In practice, the allocation of ODA is driven by multiple factors, including policy priorities and regional and historical ties. Graduation from the LDC category therefore generally does not lead to a significant reduction in bilateral ODA flows. Some donors might change the modalities of their assistance, but in general, such adjustments imply relatively small changes in overall support. This is corroborated by the conclusions of recent ex ante assessments of the impacts of graduation undertaken by the Department of Economic and Social Affairs, as part of which the Department directly consults the main development partners of each country under review by the Committee for Development Policy to be recommended for graduation (see chap. I section on procedures for graduation).

Figure II.2
Aid from Development Assistance Committee countries to least developed countries as a percentage of donor gross national income, 2019

Figure II.3
Aid from Development Assistance Committee countries to least developed countries as a percentage of donors’ total official development assistance, 2019

Modalities of bilateral official development assistance: grant element and untied aid

The Development Assistance Committee recommends that the average grant element in ODA to LDCs should be either 90 per cent of a given donor’s annual commitment to all LDCs, or at least 86 per cent of the donor’s commitments to each individual LDC over a period of three years. Accordingly, most ODA extended to LDCs by DAC members is in the form of grants. In 2019, 85 per cent of ODA flows from DAC countries to LDCs were in the form of grants.

Some donors have special modalities of ODA for LDCs:

- In Germany, financial cooperation is extended to LDCs mostly in the form of grants, whereas for other developing countries it is mostly extended in the form of soft loans;

- In Japan, low-income LDCs have access to the most favourable terms under Japanese ODA loans, while non-LDC low-income countries and LDCs that are not low-income have access to a second category of preferential loans. Other developing countries have access to less favourable but still concessional terms for loans, according to their level of income and the nature of the project;

- In the Republic of Korea, LDCs benefit from the most favourable terms among five categories of beneficiaries under the Economic Development Cooperation Fund (the other four are based on GNI per capita).

Starting in 2019, the LDC status of the recipient affects the extent to which concessional loans are counted as ODA. In the grant-equivalent approach adopted by DAC members to measure ODA, grants and the grant portion of concessional loans count as ODA. Loans to LDCs and other low-income countries require a higher grant equivalent component to be considered as ODA (at least 45 per cent for LDC, compared to 10-15 per cent for other ODA-eligible developing countries). Moreover, in order to determine the grant element, DAC uses differentiated discount rates—6 per cent for upper-middle-income countries (UMICs), 7 per cent for lower-middle-income countries (LMICs) and 9 per cent for low-income countries (LICs) and LDCs. Differentiating the discount rate implies that loans to LDCs or other low-income countries are recorded as a higher level of ODA than a loan extended under the same conditions to other country groups, which could provide an incentive for donors to allocate ODA to LDCs. DAC also applies the grant-equivalent method to other non-grant instruments, such as equities and guarantees.

Development Assistance Committee members have also undertaken commitments to improve the effectiveness of ODA by “untying” ODA to LDCs; in other words, not making aid conditional on the procurement of goods and services from the donor. In 2001, they adopted the Recommendation on Untying Official Development Assistance to the Least Developed Countries. The recommendation covers most forms of ODA, but excludes free-standing technical cooperation, and it was left up to members as to whether they could untie food aid. In its 2020 report on the recommendation on

20 OECD, OECD.Stat database, Development, Flow bases on individuals project (CRS), Creditor Reporting System (CRS).
21 The last revision was issued in January 2019. The commitment is no longer exclusive for LDCs, but also covers non-LDCs that are among the heavily indebted poor countries, other low-income countries and/or International Development Association (IDA)-only countries and territories.
untying ODA, DAC found that the share of ODA covered by the recommendation that is reported as untied was at a historical high in 2017 and 2018, but that a few members persistently fall short of their untying commitments.  

**Multilateral and regional development cooperation**

Several multilateral and regional development organizations, including the United Nations system, dedicate a significant share of their resources to LDCs. In 2019, 49 per cent of net disbursements of ODA by multilateral organizations went to LDCs (see figure II.4). However, most organizations do not rely exclusively on LDC status as a criterion for the allocation of resources and some do not consider LDC status. This section provides an overview of the institutional policies of international financial institutions and the United Nations system with regard to LDCs and the LDC category. Instruments developed by these and other organizations specifically for LDCs are described in the following subsection.

**International and regional financial institutions**

Eligibility for concessional financing to developing countries by regional and multilateral financial institutions is generally not based on whether or not a country is an LDC, but on other factors such as GNI per capita and creditworthiness. For example, concessionary financing from the International Development Association (IDA) of the World Bank is granted to all countries below a certain thresh-

![Net disbursements of official development assistance by multilateral agencies, 2010–2019](https://example.com/figure-II.4)

---

old of per capita income ($1,185 in fiscal year 2021) (see also box I.3 in chap. I). Similarly, IMF does not consider LDC status in determining the terms of its assistance to countries, but uses per capita income and other criteria.

**What happens to financing by the World Bank and the International Monetary Fund after graduation?**

In practice, the criteria adopted by the World Bank and IMF imply that a large share of support is allocated to countries that are LDCs, but not on the basis of their LDC status. Therefore, a country’s graduation from LDC status does not lead to a change in the terms or volume of assistance provided by these institutions. During a similar time frame to that of LDC graduation, countries may be reaching other thresholds, such as the World Bank’s income thresholds, that inform the allocation of resources for certain donors, whether bilateral or multilateral (see also chap. I, table I.2). It is important, for the purpose of adequately planning for and managing graduation, to understand the combined impact of these multiple graduations, but also to distinguish between the impacts of graduation from the LDC category and the impacts of other graduation processes.

**What happens to financing by the Asian Development Bank after graduation?**

The Asian Development Bank (ADB) classifies countries into groups that determine the type of financing provided. These groups are defined primarily in terms of income and creditworthiness. ADB takes into account LDC status, along with these other criteria, when classifying countries that are above the per capita GNI cut-off level, as summarized in table II.5. This means, in principle, that graduation from the LDC category could trigger reclassification in some cases.

Reclassification across groups is not, however, a mechanical process, and is addressed on a case-by-case basis. For countries whose creditworthiness is assessed by ADB as limited and that are above the income threshold, reclassification after LDC graduation does not lead to reclassification. Importantly, a Group A country that is at moderate or high risk of debt distress or in debt distress remains a Group A country even after LDC graduation.

**United Nations system**

LDCs have been declared a priority for the United Nations system. System entities have put in place institutional mechanisms, such as dedicated internal structures and staff; prioritized LDCs under strategic plans; and/or have special rules for budgetary allocations. In some cases, such support is provided to LDCs among other groups in special situations. Instruments dedicated exclusively to LDCs are discussed in the following subsection.

---

23 An exception is made in favour of small island economies (with a population of fewer than 1.5 million people), in view of their fragility and limited creditworthiness. Several of these countries have continued to benefit from assistance provided by the World Bank’s International Development Association, even though they had risen above the IDA income threshold. The International Monetary Fund uses similar exceptions for small countries and for microstates (see International Monetary Fund, 2014 Handbook of IMF Facilities for Low-Income Countries (Washington D.C., 2014)).

25 The Asian Development Bank also applies the economic and environmental vulnerability index (see chapter 1) to create an economic vulnerability premium for small island developing States during the thirteenth cycle of the Asian Development Fund. The Fund has been a grant only facility since 2017.

26 Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States, United Nations Support to the Least Developed Countries (2021).
Surveys conducted in 2017 and 2019 by the Committee for Development Policy (CDP) showed that all United Nations development system organizations recognize the LDC category and make contributions to development efforts in many LDCs, but that recognition of the category did not translate into a consistent application of priorities and budget allocation, and the type and level of assistance to LDCs varied widely. Similarly, assistance to graduating countries is often reviewed on a case-by-case basis, rather than on the basis of an established institutional approach.

There has been a recent increase in expenditures in programme countries by the United Nations development system in all countries (40 per cent increase from 2015 to 2019), but more so in LDCs (83 per cent increase over the same period). A large share of this increase has been in humanitarian-related operations. In 2019, LDCs received 50 per cent of total in-country expenditures by the United Nations development system. Expenditure per capita in LDCs is the highest of all country groups (see figure II.5 and A/76/75-E/2021/58, table 1).

Certain organizations, such as the United Nations Development Programme (UNDP) and the United Nations Children’s Fund (UNICEF), have targets for resource allocation to LDCs. These targets refer to aggregate resources allocated to LDCs, and do not necessarily apply directly to the allocation to individual LDCs:

- UNDP programmatic presence on the ground is financed primarily through core resources distributed to programme countries based on the target for resource assignment from the core (TRAC) system. TRAC is a three-tiered system in which TRAC-1 and TRAC-2 resources are linked in a combined pool to support country programming, while TRAC-3 resources are made available through a separate pool to support crisis response. The allocation of TRAC-1 and TRAC-2 takes into account a country’s gross domestic product per person and its population size. By decision of its Executive Board, UNDP has a goal of ensuring the allocation of at least 60 per cent of TRAC-1 and TRAC-2 resources to LDCs. These rules do not cover non-core resources, which often account for a significant share of resources deployed in each country.

**Abbreviation:** OCR, ordinary capital resources.
Graduation from the LDC category could potentially affect a portion of the core resources dedicated to the country in the subsequent UNDP integrated budget cycle. However, the amount of resources available after graduation would depend on numerous factors, including the country’s needs and overall UNDP funding.

- UNICEF is also required by its Executive Board to allocate 60 per cent of its regular resources to LDCs and 50 per cent to sub-Saharan Africa countries. The resources are allocated based on a system that gives greater weight to countries with the lowest GNI per capita, highest under-5 mortality rate and largest child population. This naturally results in LDCs being the greatest beneficiaries, but also means that graduation itself does not affect the amount of resources allocated to a country.

Similarly, specific instruments managed or co-managed by United Nations system entities have provisions for LDCs. Among these, the Global Environment Facility (GEF) System for Transparent Allocation of Resources for the seventh replenishment period (GEF-7, 2019-2022) includes higher minimum allocation floors for LDCs than for non-LDCs (see table II.6).

Several organizations provide substantive support to LDCs, including policy analysis and information services, capacity-building, support in obtaining access to information and resources, and advocacy services. Such forms of support are not always reflected substantially in expenditures. Examples include:

For more information, see United Nations Children’s Fund, “Assessment of ways to enhance results-based budgeting and assessment of the resource allocation system” (UNICEF/2017/EB/4).
The Department of Economic and Social Affairs (UN DESA), the Economic and Social Commission for Asia and the Pacific (ESCAP), UNCTAD, the International Telecommunication Union (ITU), the World Meteorological Organization (WMO), the World Trade Organization (WTO), the secretariat of the United Nations Framework Convention on Climate Change (UNFCCC) and the Food and Agriculture Organization of the United Nations (FAO), among others, maintain dedicated research programmes or teams focusing on LDC issues;

UN DESA provides support to LDCs in the form of analysis, data, information on support measures and capacity-building, as well as by supporting the work of CDP in its deliberations on inclusion and graduation from the LDC category (see chap. I). It collects and disseminates information on LDCs and countries that have recently graduated from the category, maintains the LDC Portal on international support measures, including support to graduation, and provides capacity-building, especially for graduating and recently graduated countries;

UNCTAD produces an annual Least Developed Countries Report that addresses trends and issues of interest to LDCs, provides substantive support to the Enhanced Integrated Framework (see below) and provides capacity-building to LDCs;

ESCAP produces an annual Asia-Pacific Countries with Special Needs Development Report, covering LDCs, landlocked developing countries and small island developing States, and provides capacity-building to LDCs in the region;

The Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (UN-OHRLLS) advocates in favour of LDCs within the United Nations and with other partners, assists LDCs in mobilizing resources and other forms of support and provides support to group consultations of LDCs. It also monitors the implementation of programmes of action for LDCs and supported the establishment of the Technology Bank for the Least Developed Countries (see below), among other activities.

### What happens to United Nations support after graduation?

In general, when consulted with regard to possible changes in assistance after graduation from the LDC category in the context of ex ante impact assessments conducted by UN DESA, most organizations state that changes will be minor and that they will continue to support countries in their areas of specialization, based on the country’s persisting needs and vulnerabilities. Several organizations are committed to supporting countries through a “smooth transition” out of the category (see chap. I), and UN-OHRLLS coordinates an inter-agency task force to that effect.
Mechanisms dedicated primarily to least developed countries and recent graduates

The following organizations and mechanisms are dedicated exclusively or primarily to LDCs and countries that have recently graduated:

**Technology Bank for the Least Developed Countries**

The Programme of Action for the Least Developed Countries for the Decade 2011-2020 (Istanbul Programme of Action) called for the establishment of a Technology Bank and Science, Technology and Information supporting mechanism, dedicated to least developed countries which would help improve least developed countries’ scientific research and innovation base, promote networking among researchers and research institutions, help least developed countries access and utilize critical technologies, and draw together bilateral initiatives and support by multilateral institutions and the private sector, building on the existing international initiatives.

The full operationalization of the Technology Bank was the object of target 17.8 of the Sustainable Development Goals. The Technology Bank, officially inaugurated in 2018, conducts baseline science, technology and innovation reviews and technology needs assessments of LDCs, in collaboration with UNCTAD, the United Nations Educational, Scientific and Cultural Organization (UNESCO) and other organizations; works to stimulate the production of high-quality research in LDCs through capacity development and international research collaboration; and works to strengthen the capacity of academies of science in LDCs, in partnership with regional networks of academies, the regional commissions and regional development banks. A number of new initiatives have been introduced more recently, including the Technology Access Partnership programme, in collaboration with WHO, UNCTAD and UNDP, to support the transfer of critical technologies related to combating the coronavirus disease (COVID-19) to LDCs for the manufacture of medical equipment, medical devices and diagnostic kits; science, technology and innovation capacity-building programmes in LDCs in the areas of biotechnology in partnership with UNESCO and the World Academy of Sciences for the advancement of science in developing countries and the International Centre for Genetic Engineering and Biotechnology; a partnership in satellite technologies with the Office for Outer Space Affairs to train experts in LDCs and build capacity in the use of satellite technologies for development; SDG Impact Accelerator projects in Bangladesh and Uganda, in partnership with Turkey and UNDP to unlock entrepreneurial talent and leverage emergent technologies to improve livelihoods; and an innovation programme focused on supporting LDCs to exploit their latecomer advantage in order to leverage existing technologies through entrepreneurial activity as well as enhancing their capacity to find, adapt and adopt proven, off-the-shelf technologies and indigenous technologies. The Technology Bank has also joined the Alliance for Affordable Internet, a partnership with the World Wide Web Foundation that aims to ensure equitable access to the Internet in LDCs.

**What happens after graduation?**

After graduation from the LDC category, countries continue to have access to the Technology Bank for a period of five years.
Climate change: work programme for the least developed countries, the Least Developed Countries Expert Group and the Least Developed Countries Fund

In the United Nations Framework Convention on Climate Change, it is stated that “the Parties shall take full account of the specific needs and special situations of the least developed countries in their actions with regard to funding and transfer of technology” (art. 4 (9)). That understanding served as the basis for the establishment of an LDC work programme by the Conference of the Parties to the Convention in 2001, and to support flexibility provisions extended to the LDCs under the Convention and the Paris Agreement.

A Least Developed Countries Expert Group was established in 2001 to provide technical guidance and support to the LDCs on the process of formulating and implementing national adaptation plans, the preparation and implementation of national adaptation programmes of action, and the implementation of the LDC work programme. It also provides technical guidance and advice on accessing funding from the Green Climate Fund (GCF) for the process of formulating and implementing national adaptation plans. At least two delegates from each LDC State party are supported in participating in training workshops conducted by the Expert Group, subject to the availability of adequate resources. Priority is also given to the LDCs in other workshops and events organized under the framework of the Conference of the Parties and its subsidiary bodies.

The Least Developed Countries Fund (LDCF) was established in 2001 to support the LDC work programme, including the preparation and implementation of national adaptation programmes of action, and more recently includes work related to the process of formulating and implementing national adaptation plans. It is operated by GEF. By 2020, the Fund had financed the formulation of national adaptation programmes of action in 51 countries to help identify urgent and immediate adaptation needs. Approximately $1.6 billion in grant financing had been approved for 305 projects in LDCs to (a) implement urgent adaptation measures laid out in national adaptation programmes of action; and (b) support the formulation of national adaptation plans to help countries identify medium and long-term adaptation needs. The 2020 programme evaluation of the Fund conducted by the GEF Independent Evaluation Office found, among other conclusions, that support from LDCF had resulted in catalytic efforts aimed at producing and demonstrating new technologies and approaches, and built foundations for larger scale projects.

What happens after graduation?

Graduated countries are not eligible to receive new funding under LDCF. Projects approved before and up until graduation would continue to receive funding in order to ensure the full implementation of those projects. Graduated LDCs have access, for the elaboration and implementation of their national adaptation plans, to the Special Climate Change Fund and, more importantly, to the Green Climate Fund (GCF). The governing instrument of GCF, approved by the Conference of the Parties in 2011, determines that, in the allocation of resources for adaptation, it take into consideration the urgent and immediate needs of developing countries that are particularly vulnerable to the adverse effects of climate change, including LDCs, small island developing States and African States using minimum allocation floors. The fund aims for a floor of 50 per cent of adaptation funds to be allocated to these countries.
Aid for Trade: Enhanced Integrated Framework

Aid for Trade is a component of ODA directed specifically at helping developing countries overcome trade-related constraints. It is delivered through multiple bilateral, regional and multilateral channels. The only instrument for delivery of Aid for Trade specifically geared at LDCs is the Enhanced Integrated Framework (EIF). Working closely with governments, development organizations and civil society, EIF supports LDCs through analytical work, institutional support and productive capacity-building projects to ensure that trade functions as a pathway for development and poverty reduction.

EIF currently partners with 46 LDCs, five recently graduated countries, 24 donors and eight partner agencies.

EIF provides the following forms of support:

a. Analytical studies that help the LDCs determine their biggest constraints to trade integration and prioritize actions to address them accordingly;

b. Trade institutional capacity-building projects to improve the trade environment for sustainable and inclusive development;

c. Productive sector capacity-building projects to ensure increased exports and access to international markets for LDCs;

d. Thematic and regional projects to address cross-cutting priorities and promote regional linkages.

Overall, Aid for Trade encompasses a much larger volume of instruments and funds, with total disbursements in Aid for Trade in 2019 of $45.8 billion, of which approximately a third went to LDCs; of that total, funding by EIF amounted to $15 million. However, one of the functions of EIF is to mobilize and leverage resources (financial, institutional, political) around the trade agenda of each country and to facilitate access to Aid for Trade funding over and above the limited amounts available in the EIF Trust Fund.

What happens after graduation?

Graduated countries continue to have access to selected EIF benefits for 5 years following graduation.

Last mile finance: United Nations Capital Development Fund

The United Nations Capital Development Fund has the objective of making public and private finance work for the poor in LDCs. It offers “last mile” finance models that unlock public and private resources, especially at the domestic level, to reduce poverty and support local economic development. In 2020, it operated in 39 LDCs. It provided inclusive digital finance solutions to over 2 million people; supported 536 local governments; and oversaw an investment portfolio of 21 loans and guarantees, along with disbursing $30 million in strategic grants, which collectively unlocked $85 million...
in direct and catalytic financing along with an additional $48 million channelled through decentralized financing mechanisms, mostly in LDCs.

**What happens after graduation?**

Programmes can continue to be funded by the United Nations Capital Development Fund, under the same conditions, for a period of three years. Assuming continued development progress, funding for another two years can be provided on a 50/50 cost-sharing basis with either the Government or a third party.

***Investment Support Programme for the Least Developed Countries by the International Development Law Organization and the Office of the High Representative***

The Investment Support Programme for LDCs provides on-demand legal and professional assistance to LDC governments and eligible state-owned or private sector entities for investment-related negotiations and dispute settlement. The programme also supports training and capacity-building activities. It functions through a collaboration between the International Development Law Organization and UN-OHRLLS and its services are provided by private law firms and other experts, at no cost to LDCs. In 2020, the first engagement under the Investment Support Programme led to a favourable arbitration outcome for the Gambia.

**What happens after graduation?**

Graduated countries remain eligible to apply for assistance under the programme for a period of five years after the date of graduation.

**The least developed countries in South-South and triangular cooperation**

South-South and triangular cooperation have become increasingly important. LDCs have been actively involved in both. In general, whether or not a country is an LDC is not a major determinant of most South-South and triangular cooperation. There are some instruments in which LDCs have been especially active. Not all are government-led. For example:

- The Least Developed Countries Renewable Energy and Energy Efficiency Initiative for Sustainable Development is dedicated to driving transformative change towards universal energy access and the transition to renewable energy and energy efficiency in all LDCs. It is fully owned and driven by LDCs and supported by the South Centre.

- The Least Developed Countries Universities Consortium on Climate Change is a South-South, long-term capacity-building initiative of universities in LDCs that focuses on networking and collaborative research, teaching and training on climate change issues.

Other initiatives are not dedicated specifically to LDCs but dedicate a significant part of their resources to these countries.
Scholarships and other forms of financial support for education and research

Governments, United Nations system entities, educational institutions and private and other non-governmental organizations provide scholarships and funding for research to LDC nationals. These include scholarships for graduate degree programmes, fellowships for the capacity development of researchers, travel grants for participating in academic conferences, or research funds for conducting research projects (diplomatic training is addressed in the next section). In some cases, support is provided exclusively to nationals of LDCs; in others, LDC nationals are given priority. Examples include:

- UNESCO gives priority and provides financial support to LDCs (along with other country groupings) through its Participation Programme and offers a limited number of scholarships to some LDC candidates for education and training at several UNESCO centres (e.g., the Institute for Water Education (IHE-Delft));
- The scholarship programme of the Intergovernmental Panel on Climate Change is available for young scientists from developing countries, especially least developed countries, for research that advances the understanding of the scientific basis of the risk of human-induced climate change, its potential impacts and options for adaptation and mitigation;
- The University of California Berkeley Law School LDC Scholarship grants a waiver of half of the tuition for Master of Law (LL.M.) programmes for nationals of LDCs;
- Nationals of LDCs and other developing countries are given high priority for scholarships for the University of Barcelona Master of Law in International Economic Law and Policy;
- The Organization for Women in Science for the Developing World has a fellowship programme for women from countries that are lagging in science and technology, which include most LDCs;
- A fellowship programme co-sponsored by UNESCO and the Republic of Korea offers 25 two-month scholarships for nationals of LDCs in Africa and Asia and the Pacific, in the area of education.

For more examples, please see www.un.org/ldcportal/scholarships.

Support for participation in the United Nations and other international forums

A number of support measures are in place to help LDCs participate in international decision-making forums, either by limiting their mandatory budget contributions, providing support for travel, providing training for negotiators, or offering flexibility in reporting requirements under international agreements.
Caps and discounts on the contribution of least developed countries to United Nations system budgets

LDCs benefit from caps, discounts or other favourable conditions regarding their contributions to the budgets of United Nations system entities. These benefits are determined following the two main methods that apply to all Member States:

a. Most of the United Nations system budgets are based on the “scale of assessments” (i.e., the percentages of the budget for which each country is responsible) used for the United Nations regular budget. The scale is determined based on capacity to pay, which is calculated on the basis of indicators of GNI, debt burden and per capita income, among others. LDCs, exclusively, benefit from a maximum rate (currently 0.01 per cent of the budget). In practice, however, the assessment rate for most LDCs is below 0.01 per cent of the budget, owing to their income and other criteria affecting the calculation of the assessment rates;

b. A small number of agencies (ITU, World Intellectual Property Organization, Universal Postal Union) use a system based on classes of contributions. Each class of contribution corresponds to a certain share (or multiple) of a pre-determined unit of contribution. Countries decide which class they will belong to (and therefore how much they will contribute), but only LDCs can opt to contribute at the lowest levels.

Similar arrangements exist for secretariats of international conventions. In the case of the UNFCCC secretariat, no contribution from an LDC can exceed 0.01 per cent of the total, while for other countries, the applicable ceiling is 25.00 per cent.

Contributions to funds and programmes, such as UNICEF and UNDP, are voluntary. Contributions to WTO are determined based on members’ shares of international trade, without any specific concessions for LDCs.

Table II.7 summarizes the system for determining LDC contributions and the LDC-specific concessions, as well as the effects of graduation from the LDC category.

Some organizations and conventions also grant greater flexibility for LDCs in arrears in the payment of their contributions. In the framework of the Rotterdam on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade and the Stockholm Convention on Persistent Organic Pollutants, LDCs are exempt from the prohibition of eligibility to the respective Bureau of the Conference of the Parties and subsidiary bodies for countries in arrears for two years or more.

Support for travel

Representatives of LDC Governments receive travel support to participate in the annual sessions of the General Assembly. The United Nations pays for the travel (but not for subsistence expenses) for up to five representatives per LDC attending a regular session of the General Assembly; one representative per LDC attending a special or emergency session of the General Assembly; and one member of a permanent mission in New York designated as a representative or alternate to a session of the General Assembly.

<tbody>
<tr>
<td><strong>Regular budget (and Working Capital Fund)</strong></td>
<td>A scale of assessments is determined every three years in a resolution of the General Assembly, based on capacity to pay, translated into indicators of gross national income (GNI), debt-burden and per capita income, among others. Each Member State is assigned a percentage (the assessment rate), corresponding to the share of the regular budget its contribution will equal. The minimum assessment rate is 0.001% and the maximum is 22%.</td>
<td>The maximum rate for LDCs is 0.01%.</td>
<td>The 0.01% cap no longer applies. This would raise the contributions of graduated countries that exceed the assessment rate of 0.01% according to the formula applied to determine capacity to pay. It has no impact on those that do not exceed that rate. LDC list changes effected subsequent to the approval of the scale would be reflected in a subsequent scale period (e.g., the scale approved in December 2024 would still consider an LDC a country scheduled for graduation in 2026).</td>
</tr>
<tr>
<td><strong>Peacekeeping operations</strong></td>
<td>Contribution is based on the scale of assessments for the regular budget adjusted by a premium in the case of permanent members of the Security Council, and by discounts in the case of all countries with per capita gross domestic product below the Member State average. Member States are grouped into levels based on per capita GNI, with larger discounts applying for the levels of countries with lower incomes. LDCs are entitled to the greatest discount: 90%.</td>
<td></td>
<td>The applicable discount rate for graduated countries with per capita GNI below the average for all Member States (most LDCs) would be 80%. The discount rate is reduced progressively for countries with incomes higher than average.</td>
</tr>
<tr>
<td><strong>International Residual Mechanism for Criminal Tribunals</strong></td>
<td>Half of the budget is paid for by Member States based on the scale of assessments applicable to the regular budget of the United Nations, and half in accordance with the rates of assessment applicable to peacekeeping operations. LDCs benefit from the cap on the rate of assessment of the regular budget and the discount on the rate of assessment for peacekeeping operations.</td>
<td></td>
<td>The amount due by the graduated country will increase proportionally to any increases in the rate of assessment for the regular budget or peacekeeping operations budget.</td>
</tr>
</tbody>
</table>

</thead>
<tbody>
<tr>
<td>Specialized agencies and related organizations: FAO, ILO, UNESCO, UNIDO, WMO, WHO, CTBTO Preparatory Commission, IAEA, ICC, IOM, ISA, ITLOS, OPCW</td>
<td>Contribution is based on the scale of assessments used for the United Nations regular budget, in some cases adjusted for more restricted membership by the application of a coefficient.</td>
<td>LDCs benefit from the cap on the rate of assessment of the regular budget. UNIDO, one of the entities that adjusts the scale by a coefficient due to more restricted membership, does not apply this coefficient to LDCs, whose rate may exceed 0.01%.</td>
<td>As for the regular budget, the 0.01% cap no longer applies. For UNIDO, the waiver on the application of the coefficient no longer applies after graduation.</td>
</tr>
<tr>
<td>International Telecommunication Union (ITU)</td>
<td>Voluntary selection of a class of contribution based on shares or multiples of an annual unit of contribution of CHF 318,000.</td>
<td>Only LDCs can contribute 1/8 or 1/16 of a unit of contribution.</td>
<td>In principle, the minimum contribution would be 1/4 of a unit of contribution. The ITU Council can authorize a graduated country to continue to contribute at the lowest classes.</td>
</tr>
<tr>
<td>World Intellectual Property Organization (WIPO)</td>
<td>Voluntary selection of classes of contribution, each corresponding to a share of a unit of contribution determined for every biennium, with only certain categories of developing countries eligible to contribute in the lowest class of contribution (class S).</td>
<td>Only LDCs can contribute at the lowest level—Ster—of the lowest class, with 1/32 of a unit of contribution.</td>
<td>Non-LDC developing countries with an assessment rate for the regular budget of less than 0.01% contribute 1/16; non-LDC developing countries with an assessment rate for the regular budget between 0.02% and 0.10% contribute 1/8. Others contribute 1/4 and up.</td>
</tr>
<tr>
<td>Universal Postal Union (UPU)</td>
<td>Voluntary selection of class of contribution, each corresponding to a share (from 1 to 50 units) of a predetermined unit of contribution.</td>
<td>Only LDCs can contribute at 0.5% of a unit of contribution. Small island developing States with a population of under 200,000 can contribute at 0.1% of a unit.</td>
<td>Graduated countries contribute at least 1 full unit of contribution. In exceptional circumstances the Council of Administration may temporarily authorize non-least developed countries to be placed in the class of 0.5 units.</td>
</tr>
</tbody>
</table>

After graduation, if requested, travel benefits can be extended for a period of up to three years. A number of United Nations organizations and Conventions have also established financial mechanisms to fund the participation of LDCs in their processes. For example:

- A specific trust fund has been established in UN-OHRLLS for the travel, daily subsistence allowance and terminal expenses of up to two representatives from each LDC to attend major conferences sponsored by the United Nations and ministerial meetings;
- A trust fund established under UNFCCC funds the travel of two delegates to the sessions of the subsidiary bodies of the Convention and the travel of three representatives for participation in sessions of the Conference of the Parties;
- WHO funds the travel of one representative to the World Health Assembly and the sessions of the Executive Board;
- The United Nations Office on Drugs and Crime funds the travel of one representative to the United Nations Congress on Crime Prevention and Criminal Justice (every 5 years) and to the Conference of the States Parties to the United Nations Convention Against Corruption;
- UNIDO funds the travel of the Minister of Industry and Commerce (or equivalent) to the biennial Ministerial Conference of the Least Developed Countries, and provides other forms of travel support;
- LDCs receive travel support to attend the Ministerial Conferences of WTO.

Other organizations provide financial support for the participation of LDCs in various international conferences and meetings, including those of the United Nations Convention against Corruption, the WHO Framework Convention on Tobacco Control, ITU (fellowships to attend meetings of the Telecommunication Development Advisory Group), the Montreal Protocol on Substances that Deplete the Ozone Layer to the Vienna Convention for the Protection of the Ozone Layer, FAO/WHO Codex Alimentarius Commission), the World Organization for Animal Health, the International Plant Protection Convention Secretariat and the International Criminal Court, as well as processes within the United Nations Secretariat, including the United Nations Open-ended Informal Consultative Process on Oceans and the Law of the Sea.

**Capacity-building for participation in negotiations**

Least developed countries themselves have formed dedicated LDC groups in several international institutions, enabling them to negotiate jointly rather than individually or as part of larger, often more heterogenous, country groups to advance issues of mutual interest. Moreover, several organizations have programmes to help build the capacity of LDCs to participate in negotiations. For example:

- The United Nations Institute for Training and Research has fellowships for nationals of LDCs to participate in its Multilateral Diplomacy Programme and core diplomatic training courses;
- The WTO secretariat conducts dedicated courses for LDC participants in Geneva, including a three-week introductory trade policy course for LDCs as well as a one-week intermediate course on priority issues for LDCs in WTO. The courses are aimed at strengthening the human and institutional capacities of LDCs to enhance their participation in the multilateral trading system. WTO also collaborates with other agencies to develop the trade capacities of LDCs. Institutional support is also provided to the LDC Group, which benefits from the administra-
tive assistance of a dedicated resource person in the LDC Unit of the Development Division at WTO. Furthermore, WTO provides internship programmes, with participants from LDCs as their main beneficiaries, and give participants the possibility to work at the WTO secretariat (Netherlands Trainee Programme) or in the permanent missions to the WTO in Geneva (French and Irish Mission internship programme of the permanent missions of France and Ireland). The “China Programme” at WTO provides support for an internship programme; annual round tables on accession-related themes; the participation of LDC coordinators in selected meetings; and a South-South dialogue on LDCs and development, among other forms of support (see also section on trade-related technical assistance and capacity-building above);

- The Advisory Centre for WTO Law provides services to LDCs without requiring them to become members;
- The Voluntary Technical Assistance Trust Fund to Support the Participation of Least Developed Countries and Small Island Developing States in the Work of the Human Rights Council provides training on human rights and engagement with the Council, fellowship programmes and practical induction trainings for delegates, annual briefings to delegates in New York on engagement with the General Assembly, and regional workshops;
- The Least Developed Countries Fund has funded programmes to build the capacity of LDCs to participate effectively in climate change processes, including the training of senior government officials, and the development of negotiation strategies and knowledge products. The LDC Group maintains a list of resources for LDC climate change negotiators. The International Institute for Environment and Development (IIED) supports the LDC Group with on-demand legal, strategic and technical advice in climate negotiations.

Other forms of support for participation in international forums

**Flexibility in reporting requirements**

Under certain agreements, LDCs have greater flexibility in reporting requirements. The section on trade-related support measures contains some examples of this in the area of trade and implementation of WTO commitments. Under UNFCCC, LDCs and small island developing States (SIDS) are accorded flexibility with regard to reporting, which refers mainly to the timeline for the submission of reports such as national communications and the biennial update reports (LDCs and SIDS are invited to submit their reports at their discretion). LDCs and SIDS were permitted to submit their first biennial update reports at their discretion and not required to do so by the 2014 deadline, like other non-Annex I Parties. Flexibility is also extended with respect to the details to be included in the different reports and associated review processes.

**Support for the costs of diplomatic representation**

The Canton of Geneva subsidizes the rental costs of the permanent missions of LDCs in Geneva, up to a certain monthly limit.
Indicators, methodology and data sources for least developed country criteria

Overview

As discussed in chapter I, the Committee for Development Policy (CDP) utilizes three criteria to identify least developed countries (LDCs):

a. Gross national income (GNI) per capita;

b. The human assets index (HAI);

c. The economic and environmental vulnerability index (EVI).

GNI per capita serves as a measure of the income and the overall level of resources available to a country, whereas HAI and EVI measure main structural impediments to sustainable development. Both HAI and EVI are indices composed of several indicators (see below). These indicators have been selected by CDP on the basis of their relevance to measuring structural impediments, their methodological soundness and the availability of the data with regard to frequency and coverage. In order to ensure comparability across countries, all indicators are based on internationally available data.

The criteria and results for all Member States of the United Nations in developing regions are published on the CDP website. Applying the criteria to all of these countries ensures that prospective candidates for inclusion are identified. Moreover, as the LDC category aims at addressing the challenges of the “least developed among the developing countries”, the criteria and indicators need to allow for a comparison between LDCs and other developing countries.

This chapter describes in detail the methodology and data sources used for the calculation of the LDC criteria. Country examples are used to illustrate these calculations and are based on the 2021 triennial review. LDC indicators, methodology and data sources are occasionally updated to reflect changes in the understanding of sustainable development and in the availability of data. Updated information on the LDC criteria will be made available on the CDP website, at http://bit.ly/CDP-LDCs.

---

1 For the list of countries in developing regions, see the United Nations Statistics Division, Methodology, “Standard country or area codes for statistical use (M49)”.

2 General Assembly resolution 2768 (XXVI).

3 From a technical point of view, indicator values for non-LDCs also play a role in the calculations for converting indicator values into index scores (see box III.2).

4 All data for the triennial reviews since 2006, including country-specific data sources, are available at www.bit.ly/LDC-data.
Gross national income per capita

Definition, methodology and data sources

Definition and rationale

GNI per capita provides information on the income status and the overall level of resources available to a country. GNI is equal to the gross domestic product (GDP), less primary incomes payable to non-resident units (e.g. investment income flowing to foreigners), plus primary incomes receivable from non-resident units (e.g. wages and salaries received by residents who temporarily work abroad for foreign companies, proceeds from fishing licensing fees sold to foreign fishing fleets, etc.).

Methodology

GNI in local currency is recorded in the national accounts in accordance with the relevant international standards. It is then converted into a common currency, the United States dollar, using the World Bank Atlas method to calculate conversion factors. The Atlas method is based on market exchange rates, but aims at reducing the impact of short-term exchange rate fluctuations on GNI in United States dollars (see box III.1). GNI in United States dollars is then divided by the annual population of a country to determine GNI per capita.

Data sources

GNI per capita is calculated by the United Nations Statistics Division (UNSD) on the basis of its National Accounts Main Aggregates (AMA) Database. The Database contains GNI data in local currencies for all Member States of the United Nations as well as population data from the United Nations Population Division (UNPD). To calculate the Atlas exchange rate, UNSD uses AMA data on exchange rates (from the International Monetary Fund (IMF) or other suitable sources) and GDP deflators, as well as data on the relative weights of currencies in the special drawing rights (SDR) from IMF.

To reduce the impact of short-term fluctuations on GNI, CDP takes an unweighted average of the latest three years of GNI per capita calculated by UNSD as its income measure; for example, for the 2021 triennial review, the average GNI per capita figures for 2017, 2018 and 2019 were used.

Inclusion and graduation thresholds

The threshold for inclusion is set at the three-year average of the level of GNI per capita, which the World Bank uses to define low-income countries. In the 2021 review, the threshold for inclusion in the LDC category was $1,018. The threshold for graduation is set at 20 per cent above the inclusion threshold; it was $1,222 in the 2021 review. The income-only graduation threshold (which enables a country to be eligible for graduation, even if none of the other two criteria are met) is twice the normal graduation threshold and was set at $2,444 in the 2021 review.

As the World Bank adjusts its income threshold every year, the inclusion and graduation thresholds of the GNI criterion are correspondingly adjusted from triennial review to triennial review. It

---

5 The latest standard is the System of National Accounts 2008, even though a number of countries still use previous versions of the System of National Accounts to compile their national accounts.

6 The World Bank thresholds for its low-income-country category were $995 in 2017, $1,025 in 2018 and $1,035 in 2019.
Box III.1

The World Bank Atlas method

The World Bank Atlas method uses the Atlas conversion factor for converting all currencies into a common currency. The conversion factor for any year is the average of a country’s exchange rate (local currency to US dollars) for that year and its exchange rates for the two preceding years, adjusted for the difference between the rate of inflation in the country and international inflation. The objective of the adjustment is to reduce any changes to the exchange rate caused by inflation.

A country’s inflation rate between year $t$ and year $t-n$ ($r_{t-n}$) is measured by the change in its gross domestic product (GDP) deflator ($p_t$):

$$ r_{t-n} = \frac{p_t}{p_{t-n}} $$

International inflation between year $t$ and year $t-n$ ($r^{SDR}_t$) is measured using the change in a deflator based on the International Monetary Fund’s unit of account: special drawing rights (SDRs). Known as the SDR deflator, it is a weighted average of the GDP deflators (in SDR terms) of China, Japan, the United Kingdom of Great Britain and Northern Ireland, the United States of America and the euro area, converted to US dollar terms; weights are the amount of each currency in one SDR unit.

$$ r^{SDR}_{t-n} = \frac{p^{SDR}_t}{p^{SDR}_{t-n}} $$

The Atlas conversion factor (local currency to the US dollar) for any country for year $t$ ($e^{atlas}_t$) is given by:

$$ e^{atlas}_t = \frac{1}{3} e_t + e_{t-1} \left( \frac{r^{-1}_{t-1}^{SDR}}{r^{SDR}_{t-1}} \right) + e_{t-2} \left( \frac{r^{-2}_{t-2}^{SDR}}{r^{SDR}_{t-2}} \right) $$

where $e_t$ is the average annual exchange rate (local currency to the US dollar) for year $t$.

is important to note, however, that the World Bank adjusts its thresholds with a measure for world inflation. This implies that the inclusion and graduation thresholds can be regarded as being constant in real terms.

Gross national income values for the 2021 triennial review

Figure III.A.1 in the appendix shows the GNI data of all developing countries included in the 2021 triennial review, while the inset magnifies the portion of the figure related to all review countries with a GNI per capita of less than $7,000 (this includes all LDCs).

The figure shows that the majority of LDCs continue to have very low per capita income (both in absolute terms as well as relative to other developing countries). In the 2021 review, 18 LDCs had GNI per capita figures above the graduation threshold. Fifteen of these countries are already at various stages of the graduation process discussed in chapter I of this Handbook. The other three meet only the income graduation threshold (established at $1,222 at the 2021 triennial review) and are therefore not yet eligible for graduation.

7 The World Bank uses the special drawing rights deflator as a measure of world inflation. See also box III.1.
Human assets index

Composition

HAI is a measure of the level of human capital. Low levels of human capital are major structural impediments, not only because they are a manifestation of unsustainable development, but also because they limit the possibilities for production and economic growth, prevent poverty eradication, exacerbate inequalities and hamper resilience to external shocks.

Good health is an integral part of human well-being in all its dimensions. Improving the health status of populations increases their economic productivity, improves educational achievement and reduces poverty. A low level of education is a major obstacle to development, as it implies an overall shortage of skills for the organization and functioning of the economy and reflects a low capacity to absorb technological advances. As discussed in chapter I, CDP regularly reviews the LDC criteria and occasionally introduces refinements to reflect advances in the understanding of impediments to sustainable development and improvements in data availability. In 2020, CDP decided to replace the indicator on the prevalence of undernourishment with an indicator on the prevalence of stunting. The new indicator is better suited to measuring malnutrition as a handicap to development, whereas the prevalence of undernourishment is more an indicator of the availability of food. Moreover, the stunting indicator has better data coverage. In addition, to address gender inequities in education that have long–term negative impacts on sustainable development, in particular discrimination against girls, CDP added another indicator to the index: the gender parity index for gross secondary school enrolment. The chosen indicator has the best data coverage, particularly with regard to LDCs. The index now consists of six indicators, three on health and nutrition and three on education (see figure III.1). All six indicators have an equal weight of one sixth in the overall HAI. A higher HAI represents a higher development of human capital.

Source: CDP secretariat.

Figure III.1
Composition of the human assets index

- Health index
  - Under-5 mortality rate
  - Prevalence of stunting
  - Maternal mortality ratio

- Education index
  - Gross secondary school enrolment ratio
  - Adult literacy rate
  - Gender parity index for gross secondary school enrolment
As HAI indicators are measured in different units, indicator values are first converted into index scores between 0 and 100. The average of these index scores is then the final HAI score of a country. Box III.2 describes the methodology (known as the max-min procedure) used for converting the indicator values into index scores.

**Box III.2**

**Max-min procedure to convert indicators into indices**

In order to construct indices whose values can range between 0 and 100, the minimum and maximum admissible values—also known as lower and upper bounds—must first be determined. The CDP bases these bounds on the distribution of indicator values among all developing countries (see tables III.1 and III.4 in the sections explaining the calculations of HAI and EVI for the exact bound values). However, in order to reduce the impact of extreme outliers on the distribution of index values, the bounds may be set higher (lower) than the actual minimum (maximum) value of the indicator's data set. The bounds are generally kept constant across triennial reviews. In addition, for one indicator (victims of disasters), the values are transformed using the natural logarithm in order to address possible distortions caused by highly skewed distributions of indicator values, or to account for the fact that the associated impediments are clearly non-linear in indicator values.

The basic formula for converting an indicator value \( V \) into an index score \( I \) is:

\[
I = 100 \times \frac{V - \text{min\_value}}{\text{max\_value} - \text{min\_value}}
\]

where,
- \( \text{min\_value} \) is the minimum admissible value (lower bound) and,
- \( \text{max\_value} \) is the maximum admissible value (upper bound).

For countries with indicators values below (above) the lower (upper) bound, the actual indicator value is replaced with the lower (upper) bound resulting in an index score of 0 (100).

In a few cases, indicator and criteria point in opposite directions. For example, a high under-5 mortality rate signifies a low (rather than high) level of human assets. In these cases, the following adjusted formula is used:

\[
I^* = 100 - I = 100 \times \frac{\text{max\_value} - V}{\text{max\_value} - \text{min\_value}}
\]

Again, actual indicator values are replaced with lower or upper bounds, if necessary.

**Inclusion and graduation thresholds**

Since 2014, inclusion and graduation thresholds for HAI have been fixed at their 2012 review levels, with adjustments permitted for eventual changes in indicators, methodologies or data sources in future reviews.\(^8\)

---

\(^8\) Previously, the thresholds for HAI and EVI had been established for each review based on the distribution of HAI (and EVI) values of a reference group, which changed over time (see Official Records of the Economic and Social Council, 1991, Supplement No. 11 (E/1991/32)). The move to absolute thresholds enabled countries to qualify for graduation if they made significant progress in overcoming the structural impediments they faced, independently of the progress (or regress) of other countries (see Official Records of the Economic and Social Council, 2014, Supplement No. 13 (E/2014/33)).
Despite the changes to the composition of HAI introduced in 2020, the overall distribution of index scores around the thresholds remains unaffected, so that an adjustment of thresholds was unnecessary. Thus, the HAI threshold for inclusion in the LDC category at the 2021 triennial review was set at 60, the same value as in 2012, and the graduation threshold was set at 10 per cent above the inclusion threshold, at 66.

**Definition, methodology and data sources of the indicators**

*Under-5 mortality rate*

**Definition and rationale**

The indicator is defined by WHO and other relevant organizations as “the probability of dying between birth in a specific year or period before reaching the age of five, if subject to age-specific mortality rates of that period”. It is expressed as deaths per 1,000 live births. The under-5 mortality rate (U5MR) provides comprehensive information on the health impacts of social, economic and environmental conditions in a country. Even though the indicator specifically measures child survival, it is seen as suitable and the best available measure for the overall health status of a population, in particular in LDCs.

**Methodology**

The Inter-Agency Group for Child Mortality Estimation (IGME) estimates U5MR at a specific point in time on the basis of all available country-specific estimates that are deemed to be of sufficient quality. Country-specific estimates are derived from a variety of sources, including vital registration systems and sample surveys that ask women about the survival of their children in a detailed manner or in a summary format. Whereas the use of complete vital registration systems is the preferred method, these systems are generally absent in LDCs, so nationally representative surveys or censuses are the main source of data. The estimation method chosen by IGME ensures that the data are comparable across countries and takes into account the differences in data quality across individual estimates and data sources.9

**Data sources**

To calculate HAI, CDP uses the Child Mortality Estimation (CME) database, which is updated annually by IGME. CDP uses the estimate for the latest available year, which is typically two years before the triennial review year; for example, the estimate for 2019 was used for the 2021 triennial review.

*Prevalence of stunting*

**Definition and rationale**

The indicator is defined as the percentage of children under 5 who fall below minus 2 standard deviations (moderate and severe) from the median height-for-age of the WHO Child Growth Standard population. The percentage of children who have a low height for their age (stunting) reflects the cumulative effects of undernutrition and infections since and even before birth. Stunting is the result of long-term nutritional deprivation and often results in delayed mental development, poor school

---

performance and reduced intellectual capacity. This measure can therefore be interpreted as an indication of poor environmental conditions or the long-term restriction of a child’s growth potential.

**Methodology**

The UNICEF-WHO-World Bank Joint Child Malnutrition Estimates (JME) group estimates the indicator by collecting national data sources that contain information on child malnutrition — specifically, data on the height, weight and age of children under 5 to generate national-level estimates of the prevalence of stunting. These national-level data sources mainly comprise household surveys (e.g. multiple indicator cluster surveys, demographic and health surveys, Standardized Monitoring and Assessment of Relief and Transitions surveys and Living Standards Measurement Studies). As national surveys are administered sporadically, the JME group applies a statistical model to enable comparisons across countries during the same year. The estimation methods used by JME account for differences in definitions (i.e. age and growth references) and data quality across sources.

**Data sources**

CDP uses the country-level modeled estimates as reported by the JME group, available on the UNICEF website. Estimates for countries not included in JME are obtained from the Institute for Health Metrics and Evaluation.

To ensure consistency across indicators and time, CDP uses the estimate for two years before the triennial review; for example, the estimate for 2019 was used for the 2021 triennial review.

**Maternal mortality ratio**

**Definition and rationale**

The indicator is defined by WHO and other relevant organizations as “the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births during a given time period”. Maternal mortality is a leading cause of death and disability among women of reproductive age, that is, at an age when death and disability have particularly negative social and economic effects. The maternal mortality ratio (MMR) represents the risk associated with each pregnancy and also captures broader development handicaps such as poorly developed health systems and gender inequality.

**Methodology**

MMR is calculated by dividing the recorded (or estimated) number of maternal deaths by the total recorded (or estimated) number of live births in the same period, and multiplying the result by 100,000. Measurement requires information on pregnancy status, timing of death (during pregnancy, childbirth or within 42 days of termination of pregnancy) and cause of death. The Maternal Mortality Estimation Inter-agency Group (MMEIG), which consists of WHO, UNICEF, the World Bank and the United Nations Population Fund, estimates the indicator using data collected through civil registration and vital statistics systems, censuses, household surveys, reproductive-age mortality studies, verbal autopsies and other specialized studies. The estimation method used by MMEIG accounts for
differences in definitions and data quality across sources. In cases of missing data, it also utilizes data on relevant covariates (GDP per capita, skilled-birth attendance and total fertility rate).\footnote{For details of the methodology, see John R. Wilmoth and others, “A new method for deriving global estimates of maternal mortality”, Statistics, Politics and Policy, vol. 3, No. 2 (July 2012).}

**Data sources**
CDP uses the indicator estimated by MMEIG, which is available on the UNICEF website and is regularly updated. CDP uses the estimate for the latest available year, which is typically three to four years before the triennial review; for example, the estimate for 2017 was used for the 2021 triennial review.

**Gross secondary school enrolment ratio**

**Definition and rationale**
The indicator measures the number of pupils enrolled in secondary schools, regardless of age, expressed as a percentage of the population in the country-specific official age group for secondary education. It provides information on the share of population with a level of skills deemed to be necessary for significant developmental progress.

**Methodology**
The indicator is calculated by dividing the number of pupils in secondary education (according to national standards) by the number of persons in the theoretical age group for secondary education. The age group for secondary education may differ across countries, depending on the national curriculum. The Institute of Statistics (UIS) of the United Nations Educational, Scientific and Cultural Organization (UNESCO) obtains the number of enrolled pupils from submissions by national education ministries, whereas data on population by age are obtained from UNPD.

**Data sources**
CDP uses the indicator reported by UIS in its UIS Data Centre database. Estimates for countries not reported on by UNESCO are obtained from additional official databases, reports or publications from other international organizations.

As data are not available for every year for every country, CDP uses the value of the latest available year within a five-year period. For example, the latest available data within the period 2015–2019 was used for the 2021 triennial review.

**Adult literacy rate**

**Definition and rationale**
The indicator measures the number of literate persons aged 15 and above, expressed as a percentage of the total population in that age group. The indicator provides information on the size of the base available for enlarging the trained and skilled human resources needed for development.

**Methodology**
According to UNESCO, persons are considered literate if they can read and write, with understanding, a simple statement related to their daily lives. However, the definition of literacy and methods of estimation vary across countries. For instance, when the indicator is derived from census data, it is
normally based on self-declaration. If surveys are used, either self-assessments or brief literacy tests are used to estimate whether individuals are literate or not. Some countries also use information on educational attainment as a proxy for literacy. Occasionally, UNESCO uses its Global Age-specific Literacy Projections Model to estimate current literacy rates based on previous data.

**Data sources**

The indicator is reported by UIS in its UIS Data Centre database. The database also contains information on country-specific methodologies for estimating literacy rates. Estimates for countries not reported by UNESCO are obtained from additional official databases, reports or publications from other international organizations.

As data are not available for every year for every country, CDP chooses the latest available year within a five-year period. For example, the latest available data within the period 2015–2019 was used for the 2021 triennial review.

**Gender parity index for gross secondary school enrolment**

**Definition and rationale**

The indicator measures the ratio of girls to boys enrolled at the secondary level in public and private schools. It provides information on gender inequities in education that have long-term negative impacts on sustainable development, in particular discrimination against girls. An index of less than 1 suggests that girls are more disadvantaged than boys with regard to learning opportunities, and an index of greater than 1 suggests the reverse.

**Methodology**

The indicator is calculated by dividing the female gross enrolment ratio in secondary education by the male gross enrolment ratio in secondary education. The age group for secondary education may differ across countries, depending on the national curriculum. UIS of UNESCO obtains the number of enrolled pupils from submissions by national education ministries, whereas data on population by age are obtained from UNPD.

**Data sources**

CDP uses the indicator reported by UIS in its UIS Data Centre database. Estimates for countries not reported on by UNESCO are obtained from additional official databases, reports or publications from other international organizations.

As data are not available for every year for every country, CDP uses the value of the latest available year within a five-year period. For example, the latest available data within the period 2015–2019 was used for the 2021 triennial review.

**Human assets index calculation: selected examples**

Tables III.1 and III.2 and figure III.2 illustrate the calculation of HAI using four countries (Bangladesh, Benin, Chad and South Sudan) from the 2021 triennial review as examples.

Table III.1 presents the bounds for each of the six HAI indicators and shows how indicator values are converted into index values (see also box III.2 on the max-min procedure). The data value is the actual indicator value obtained for each country from the sources described above. The column
“Max-min procedure” shows the calculation performed to derive the index for each country and indicator using the data value and the lower and upper bounds as inputs. Note that while the three education indicators use the basic formula (I) described in box III.2, the three health and nutrition indicators use the adjusted version (I*). This is because higher child and maternal mortality and stunting rates correspond to lower human assets.

As noted earlier, HAI reflects the average of the index scores of the six HAI indicators using equal weights. Table III.1 shows the HAI calculation for the four sample countries using the corresponding index scores computed in table III.1.

Figure III.2 displays the composition of HAI of the four sample countries as a graph using the corresponding data from table III.2.

Human assets index 1

Figure III.2

Composition of the human assets index of selected countries, 2021 triennial review

Human assets index values for the 2021 triennial review

Figure III.A.2 in the appendix shows the HAI score of all countries included in the 2021 triennial review. It shows that most LDCs have significantly lower HAI scores than other developing countries. Only 4 non-LDCs have HAI scores below the LDC inclusion threshold, whereas 16 LDCs have HAI scores above the graduation threshold. Fourteen of these countries also surpass the GNI or EVI thresholds and are therefore at one of the various stages of the graduation process discussed in chapter I. The remaining two countries have not yet reached the GNI or EVI graduation thresholds and thus are not yet eligible for graduation.

Economic and environmental vulnerability index

Composition

EVI measures the structural vulnerability of countries to economic and environmental shocks. High vulnerability is a major impediment to sustainable development in LDCs in view of their heightened exposure to shocks and the long-lasting negative impacts of those shocks. To an extent, all countries are vulnerable to some specific adverse shocks. Thus, when using vulnerability as an explicit criterion to designate countries as LDCs, there is a need to focus on those sources of vulnerability that: (a) accentuate or perpetuate underdevelopment; (b) are not the result of misguided policies but, instead, are such that they limit policymakers’ capacity to respond to shocks; and (c) are beyond a country’s control.

CDP understands vulnerability as the risk of being harmed by exogenous shocks. Vulnerability depends on the magnitude and frequency of such shocks, on the structural characteristics of the country concerned—which affect the degree to which it is exposed to such shocks—and the country’s capacity to react to shocks. There is no explicit resilience component in EVI, as some aspects of resilience are policy-related and therefore non-structural. Moreover, other key factors of resilience, such as income and human capital, are measured by the other two criteria for the identification of LDCs, namely GNI per capita and HAI.

In terms of economic shocks, EVI focuses on trade shocks; with regard to environmental shocks, EVI covers natural hazards, weather shocks and climate change. These shocks potentially affect economic activity, consumption, employment, the well-being of the population and the natural resource base of economic and social development. Moreover, they are mostly exogenous, at least from the perspective of LDCs, even though the frequency and magnitude of trade shocks and environmental shocks (e.g. climate change) are to some extent dependent on policy choices made at the international level.

In 2020, CDP decided to implement the following changes to EVI:

a. The index for measuring vulnerability to economic and environmental shocks has been renamed the “economic and environmental vulnerability index”, as the previous name, “economic vulnerability index”, is misleading. For consistency, the abbreviation “EVI” has been kept;

b. The refined EVI has two sub-indices: an economic vulnerability index and an environmental vulnerability index. All sub-indices and sub-sub-indices used until now have been abolished;
c. The indicator on population size has been removed from the index, as a small population size is neither an economic nor an environmental vulnerability. Specific economic and environmental vulnerabilities associated with or compounded by population size are already captured in some of the remaining EVI indicators;

d. To broaden the coverage of environmental vulnerabilities, an indicator on the share of population living in drylands has been added to EVI;

e. The remoteness indicator has been renamed “remoteness and landlockedness” to better reflect the fact that the indicator accounts for specific challenges facing landlocked developing countries;

f. The indicator “victims of natural disasters” has been renamed “victims of disasters” to better align it with common United Nations terminology and to highlight that disasters are caused by the interaction of natural hazards with conditions of exposure, vulnerability and capacity.

The refined EVI is composed of eight indicators: four indicators on economic vulnerability and four on environmental vulnerability (see figure III.3). All eight indicators have an equal weight of one eighth in the overall index. A lower EVI score indicates lower economic and environmental vulnerability.

As these indicators are expressed in different measurement units, indicator values are first converted into an index score of between 0 and 100, using the max-min procedure described in box III.2, which is also applied to HAI components, as discussed above.

Figure III.3
Composition of the economic and environmental vulnerability index

Source: CDP secretariat.
Inclusion and graduation thresholds

As in the case of HAI, the inclusion and graduation thresholds for EVI have been permanently fixed at the 2012 level. Despite the changes to the composition of EVI, the overall distribution of index scores around the thresholds remains unaffected, so that an adjustment of thresholds is unnecessary at this time. Thus, the EVI threshold for inclusion in the LDC category was set at 36 in the 2021 triennial review, the same value as in 2012. The graduation threshold was set at 10 per cent below the inclusion threshold, at 32.

Definition, methodology and data sources of the indicators

**Share of agriculture, forestry and fishing in gross domestic product**

Definition and rationale

The indicator is defined as the percentage share of the agriculture, hunting, forestry and fishing sectors (categories A+B in ISIC Rev. 3.1) in the gross value added of a country. It provides information on countries’ exposure to shocks caused by their economic structure, because agriculture, hunting, forestry and fishing are particularly subject to natural and economic shocks.

Methodology

The indicator is calculated by dividing the value added of agriculture, hunting, forestry and fishing by the total gross value added of all sectors. Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector. Data for value added in agriculture, hunting, forestry and fishing (either combined or separately) and for gross value added are reported annually by countries to UNSD through the United Nations National Accounts Questionnaire.

Data sources

CDP uses data published annually by UNSD in its National Accounts Main Aggregates Database in the series “Value Added by Economic Activity, Percentage Distribution”.

CDP applies the three-year average of the latest available years reported by UNSD for all countries; for example, for the 2021 triennial review, the 2017–2019 average was used.

**Remoteness and landlockedness**

Definition and rationale

The remoteness and landlockedness indicator is defined as a trade-weighted average of a country's distance from world markets. Location is a factor that has a bearing on exposure and resilience, as countries situated far from major world markets face a series of structural handicaps—such as high transportation costs and isolation—which affect the economy's ability to export and import, and render countries less able to respond to shocks in an effective way. Countries isolated from main markets have difficulty in diversifying their economies, even in the current era of globalization and the Internet. Remoteness and landlockedness are structural obstacles to trade and growth and possible sources of vulnerability when shocks occur. The indicator takes into account the increased transport costs incurred by landlocked countries.
Methodology

The indicator measures the trade-weighted average minimum distance for a country to reach a significant fraction (50 per cent) of the world market. For its calculation, the CDP secretariat uses two sets of data: (a) the bilateral physical distance between a country and all other countries; and (b) the market share of each actual or potential trading partner in world markets (exports and imports).

Figure III.4 illustrates the necessary steps for the calculation of the remoteness and landlockedness indicator. The steps are described in more detail in the following paragraphs.

**Step 1:** For each country under consideration, all countries are sorted in ascending order by the physical distance to the considered country. The world market shares of all countries (ordered by distance) are then added up until their cumulative share reaches 50 per cent of the world market. The minimum average distance is then calculated as the weighted average of the distances of actual and potential trading partners to the country under consideration, with trading partners’ market shares used as weights.

Figure III.5 shows the countries (in blue) included in the remoteness calculation for Bangladesh (shown in red). These are the countries whose markets are the nearest to Bangladesh and whose cumulative share in world exports and imports is 50 per cent.

**Step 2:** The minimum average distance is then transformed into logarithms and converted into the remoteness value by using the following formula:

\[
    r_i = 100 \times \frac{\ln(d_i) - \ln(d_{min})}{\ln(d_{max}) - \ln(d_{min})}
\]

Where,

- \( i \) is the country index;
- \( r_i \) is the remoteness value of country \( i \);
- \( d_i \) is the minimum average distance of country \( i \);
- \( d_{min} \) is the smallest average distance (2000 km); and
- \( d_{max} \) is the largest average distance (10,300 km).

**Source:** CDP secretariat.

For a more detailed description of the methodology, see Committee for Development Policy secretariat, “Measuring remoteness for the identification of LDCs” (August 2015).
The values $d_{\text{min}}$ and $d_{\text{max}}$ are based on the smallest and largest minimum average distance values of all Member States of the United Nations in developing regions. The formula is the same as in the max-min procedure used for calculating index values (see box III.2), but in the case of remoteness, the max-min procedure is applied twice: once in the second step while constructing the indicator value and then later when the index values are calculated.

**Step 3:** An adjusted remoteness value ($r_i^*$) is computed to take into account the particular situation of landlocked countries. These countries, facing higher barriers to trade, often confront relatively higher transport costs for a given distance. The adjustment factor is 15 per cent.

$$r_i^* = 0.85 \times r_i + 0.15 \times l_i$$

where,

$$l_i = \begin{cases} 100 & \text{if } i \text{ is landlocked} \\ 0 & \text{otherwise} \end{cases}$$

Table III.3 demonstrates the three steps of the calculation of the remoteness and landlockedness index for Bangladesh and Nepal.

**Data sources**

The indicator is calculated by the CDP secretariat based on data on bilateral distances between the capitals or major cities in the world, obtained from the Centre d’études prospectives et d’informations internationales (CEPII) data series “dist_cepii”. World market shares are calculated based on the components “exports of goods and services” and “imports of goods and services” reported by UNSD in its National Accounts Main Aggregates Database in the series “GDP by Expenditure, at current prices — US Dollars”.

In order to reduce the impact of short-term fluctuations in exports and imports, CDP uses the three-year average of the latest available years reported by UNSD for all countries; for example, for the 2021 triennial review, the 2017–2019 average was used.
Merchandise export concentration

Definition and rationale
The indicator measures the product concentration of a country’s exports. As currently applied, export concentration excludes services. This is largely due to methodological differences in terms of both data collection and reporting. A more concentrated export structure indicates higher vulnerability to shocks, as a relatively larger part of the export-oriented sectors can be potentially affected by shocks in specific product markets.

Methodology
The numbers represent Herfindahl-Hirschmann indices derived by applying the following formula to the product categories of the Standard International Trade Classification (SITC) at the three-digit level:

\[
H_j = \sqrt{\sum_{i=1}^{n} \left( \frac{x_{ij}}{X_j} \right)^2} - \sqrt{\frac{1}{n}}
\]

where,
- \( j \) is the country index;
- \( x_{ij} \) is the value of exports of commodity \( i \) of country \( j \);
- \( X_j = \sum_{i=1}^{n} x_{ij} \) is the value of total exports of country \( j \); and
- \( n \) is the number of products at the three-digit SITC level.

The indicator is normalized so that it can vary between 0 and 1 (in cases in which only one good is exported).
Data sources
CDP uses the indicator as it is calculated and reported for all countries by the United Nations Conference on Trade and Development (UNCTAD) in its UNCTADstat database in the series “Merchandise: Product concentration and diversification indices of exports and imports, annual” under the section “International merchandise trade”, subsection “Trade indicators”.

CDP applies the three-year average of the latest available years reported by UNCTAD for all countries; for example, for the 2021 triennial review, the 2017–2019 average was used.

Instability of exports of goods and services

Definition and rationale
The indicator measures the variability of the value of exports around its trend, calculated over a 20-year period. It is defined as the standard deviation of the difference between the value of annual export earnings and its multi-year trend. Highly variable export earnings cause fluctuations in production, employment and the availability of foreign exchange, with negative consequences for sustainable economic growth and development. High export instability indicates heightened vulnerability to trade shocks.

In 2020, CDP modified the methodology by weighing the volatility of exports in terms of volume around their trend with the country’s trade dependency (in other words, the ratio of exports plus imports to GDP). This revision reflects the fact that export instability is a greater impediment for countries that depend on trade. It also takes into account the removal of the population size indicator from EVI in the same year, which had captured a key source of trade dependency. The latest three-year average of the trade dependency ratio was used for the 2021 triennial review.

Methodology
The indicator is calculated in three steps. First, the trend in export earnings of each country is determined from the following regression equation:

\[ \ln(X_t) = \alpha + \beta \ln(X_{t-1}) + \gamma t + e_t \]

where,
- \(X_t\) is the value of exports of goods and services at constant United States dollars in year \(t\);
- \(t\) is the time variable (each year in the sample period);
- \(e_t\) is the error term in year \(t\); and
- \(\alpha\), \(\beta\) and \(\gamma\) are the regression coefficients.

The equation is estimated separately for each country, using standard ordinary least squares. In this formulation, the trend is assumed to have both a deterministic and a stochastic component. For this reason, the de-trending method used for this indicator is called a mixed-trend regression.

Then, the standard deviation of the differences between trend and actual values is used as the instability measure:

\[ S = \sqrt{\frac{\sum_{t} e_t^2}{N - 1}} \]

where,
- \(e_t = \ln(X_t) - \hat{\alpha} - \hat{\beta} \ln(X_{t-1}) - \hat{\gamma} t\);
- \(\hat{\alpha}, \hat{\beta}, \hat{\gamma}\) are the estimated regression coefficients; and
- \(N\) is the number of observations.
Finally, the trade dependency scores (the ratio of exports plus imports to GDP) are applied as weight to the instability value.

**Data sources**

The indicator is calculated by the CDP secretariat, utilizing data reported by UNSD in its National Accounts Main Aggregates Database in the series “GDP by Expenditure, at constant 2005 prices — US Dollars” on the exports of goods and services in constant United States dollars. Trade dependency is calculated based on data from the series “GDP by Expenditure, at current prices — US Dollars” from the same data source.

CDP calculates the indicator based on data for the latest available 20 years. Thus, the instability value for the 2021 triennial review was calculated on the basis of data for the period 2000–2019. For the trade dependency weights, the 2017–2019 averages were used.

**Share of population in low elevated coastal zones**

**Definition and rationale**

The indicator measures the share of the population of a country who live in low elevated coastal zones, defined as areas contiguous to the coast below a certain elevation threshold. Currently, an elevation threshold of five metres is used. The indicator intends to capture vulnerability to coastal impacts (including sea level rise and storm surges) associated with climate change.

**Methodology**

The indicator is calculated by dividing the number of people living in areas contiguous to the coast with an elevation of less than five metres by the total population of the country. Classification of areas into elevation zones is done based on satellite data. Spatially distributed population data is based on census or administrative records as well as on the distribution and density of built-up areas.

**Data sources**

CDP uses the indicator produced by the Center for International Earth Science Information Network at Columbia University and the City University of New York (CUNY) Institute for Demographic Research.

**Share of population living in drylands**

**Definition and rationale**

The indicator measures the share of the population of a country who live in drylands. Drylands and their fragile ecosystems are particularly sensitive to changing rainfall patterns and land degradation induced by climate change. The expansion of drylands is expected to continue as a result of continental warming, threatening to aggravate poverty, food and water insecurity in affected areas.

---

13 Due to the inclusion of lagged exports in the regression, 21 years of data (1999–2019 in the case of the 2021 triennial review) are needed as input for the calculation.

14 For details on the methodology of the indicator, see National Aeronautics and Space Administration (NASA), Socioeconomic Data and Applications Center, “Low elevation coastal zone urban-rural population and land area estimates (1990, 2000, 2015), version 3.”
**Methodology**

The indicator is calculated by the CDP secretariat using readily and publicly available spatial population and climate data. The indicator uses the concept of “drylands” of the United Nations Convention to Combat Desertification, which refers to arid, semi-arid and dry sub-humid areas, defined as areas where the ratio of precipitation to potential evaporation, is between 0.05 and 0.65. In line with common practice, the indicator uses 30-year averages of this ratio (known as aridity index). To avoid counting transitions from arid land (an aridity index between 0.05 and 0.2) to hyper-arid land (an aridity index of less than 0.05) as a reduction in drylands and, thus, a decline in vulnerability, hyper-arid areas are also included as long they had an aridity index of 0.05 or higher in the past 20 years. The final indicator is derived by dividing the population living in drylands by the total population of a country.

**Data sources**

The indicator is calculated by the CDP secretariat based on an aridity index derived from high-resolution climate data from the University of East Anglia Climatic Research Unit (CRU TS version 4) and gridded population data from the Center for International Earth Science Information Network at Columbia University, version 4.

The indicator includes the latest 30 years for which data coverage is complete; for example, for the 2021 triennial review, the period 1990–2019 was used for the calculation of the aridity index and the 2019 data for population.

**Instability of agricultural production**

**Definition and rationale**

The indicator measures the variability of agricultural production around its trend, defined as the standard deviation of the differences between production and its trend over a given period of time (20 years). A high variability of agricultural production is indicative of high vulnerability to natural shocks, as such variability often reflects the impacts of natural shocks, including droughts and disturbances in rainfall patterns.

**Methodology**

The indicator is calculated in two steps. First, the trend in agricultural production of each country is determined from the following regression equation:

\[
\ln(X_t) = \alpha + \beta \ln(X_{t-1}) + \gamma t + e_t
\]

where,

- \(X_t\) is the index of total agricultural production in volume terms in year \(t\);
- \(t\) is the time variable (each year in the sample period);
- \(e_t\) is the error term in year \(t\); and
- \(\alpha, \beta, \text{ and } \gamma\) are the regression coefficients.

The equation is estimated separately for each country using standard ordinary least squares. In this formulation, the trend is assumed to have both a deterministic and a stochastic component. For this reason, the de-trending method used for this indicator is called a mixed-trend regression.

---

Finally, the standard deviation of the differences between trend and actual values is used as the instability measure:

$$S = \sqrt{\sum \frac{\hat{e}_t^2}{(N - 1)}}$$

where,

$$\hat{e}_t = \ln(X_t) - \hat{\alpha} - \hat{\beta} \ln(X_{t-1}) - \hat{\gamma} t;$$

$$\hat{\alpha}, \hat{\beta}, \hat{\gamma}$$ are the estimated regression coefficients; and

$N$ is the number of observations.

**Data sources**

The indicator is calculated by the CDP secretariat on the basis of data reported by the Food and Agriculture Organization of the United Nations (FAO) reported in its FAOSTAT database as “Gross production index number” in the series “Agriculture + (Total)” under “Production” and “Production Indices”.

The CDP uses the trend of the latest available 20 years; thus, for the 2021 triennial review, the trend was calculated over the period 1998–2018.\(^\text{16}\)

**Victims of disasters**

**Definition and rationale**

The indicator measures the share of the population who are victims of disasters. Victims of disasters are defined as people killed or affected (i.e. people requiring immediate food, water, shelter, sanitation or medical assistance). It includes those affected by weather and climate-related disasters (such as floods, landslides, storms, droughts and extreme temperatures) as well as geophysical disasters (such as earthquakes or volcanic eruptions). The indicator reflects vulnerability to natural shocks, in particular the human impact of natural disasters associated with these shocks.

**Methodology**

First, the annual number of victims for each country is calculated by adding the numbers of persons killed and of persons affected by disasters (geophysical, meteorological, hydrological and climatologic disasters). The share of victims is then calculated by dividing that figure by the total population of the country (estimated as of mid-year). In order to account for fluctuations of disasters over time, the indicator is calculated annually over a period of 20 years and then averaged.

**Data sources**

The indicator is calculated by the CDP secretariat on the basis of data on the total population from UNPD in its World Population Prospects database, and data on total deaths from and on the total number of people affected by disasters from the Emergency Events Database of the WHO Centre for Research on the Epidemiology of Disasters. The data set can be retrieved from the database by using a query tool and selecting the subgroups “Climatological”, “Geophysical”, “Hydrological” and “Meteorological” from the disaster classification category “Natural”.

The indicator includes the latest 20 years for which data coverage is complete; for example, for the 2021 triennial review, the period 2000–2019 was used for the calculation.

---

\(^{16}\) Owing to the inclusion of lagged agricultural production in the regression, 21 years of data (1997–2018 in case of the 2021 triennial review) are needed as input for the calculation.
Economic and environmental vulnerability index calculation: selected examples

Tables III.4 and III.5 and figure III.6 illustrate the calculation of EVI for the 2021 triennial review using four countries (Gambia, Kiribati, Nepal, Sierra Leone) as examples.

Table III.4 presents the bounds for each of the EVI indicators and then demonstrates how indicator values are converted into index values (see also box III.2 on the max-min procedure). The data value is the actual indicator value obtained for each country from the sources described in the previous sections. In the case of remoteness and landlockedness, the data value represents the adjusted remoteness value rather than the distance in kilometres. The column “max-min procedure” shows the calculation for deriving the index for each country and indicator using the data value and the lower and upper bounds as input. As noted in box III.2, values for victims of disasters are first transformed into logarithms to account for the skewness of their distribution. For all indicators, higher indicator values imply higher vulnerability, so the basic formula (I) is used.

As noted earlier, EVI reflects the average of the index values of the eight EVI indicators using equal weights. Table III.5 shows the EVI calculation for the four sample countries using the corresponding index scores computed in table III.4.

Figure III.6 sets out the composition of the EVI of the four sample countries in a chart, using the corresponding data from table III.5.

Economic and environmental vulnerability index values for the 2021 triennial review

Figure III.A.3 in the appendix shows the EVI scores of all countries included in the 2021 triennial review. While on average LDCs have significantly higher EVI scores than other developing countries, there are also a number of non-LDCs that are highly vulnerable, in particular SIDS, landlocked developing countries and countries dependent on oil exports. As non-LDCs, though, these countries have higher human asset and national income levels than LDCs. In total, 27 non-LDCs have EVI scores above the LDC inclusion threshold, whereas 12 LDCs have an EVI value that is below the graduation threshold. Of these, six countries also meet the graduation thresholds for GNI and HAI and one country meets the graduation threshold for HAI, and are therefore at one of the various stages of the graduation process discussed in chapter I. The remaining five LDCs have not yet reached the GNI or HAI graduation thresholds and are therefore not yet eligible for graduation.

Figure III.6
Composition of the economic and environmental vulnerability index of selected countries, 2021 triennial review

Summing up: the 2021 triennial review

In figure III.7, individual LDCs are represented by a bubble. The horizontal and vertical positions of the bubbles correspond to EVI and HAI scores, respectively, whereas the bubble size illustrates GNI per capita. The colour of each bubble reflects the performance of LDCs vis-à-vis the graduation thresholds and their status in the graduation process.

Moreover, figure III.7 and table III.6 show the results of the 2021 triennial review for LDCs, and simultaneously present the scores of the three different criteria. Sixteen countries met the eligibility criteria for graduation at the 2021 triennial review. In addition, 10 LDCs passed the graduation threshold of a single criterion and were therefore not yet eligible for graduation. Almost half of the LDCs (20 countries) did not yet meet the graduation threshold of any of the LDC criteria.

Committee for Development Policy

The Committee for Development Policy (CDP) is a subsidiary body of the United Nations Economic and Social Council. It provides independent expert advice to the Council on a wide range of issues related to the 2030 Agenda for Sustainable Development. The Committee is also responsible for reviewing the least developed countries (LDCs) category, making recommendations as to which countries should be included in the category or graduate therefrom, and monitoring the progress of countries during and after graduation from the category.

For more information, please visit cdp.un.org
