# The Hand-in-Hand Initiative

**FAO Director- General Initiative**

# Hand in Hand Initiative - Working together with countries

# Key elements behind the framework

- **Principle 1. Target the poorest people**

The framework is a tool to target the poorest of the poor who also suffer from high rates of hunger.

- **Principle 2. Differentiate strategies**

The framework should differentiate strategies for areas with and without agricultural potential

- **Principle 3. Bring together all dimensions of food systems**

FAO data on agro-ecology, water, land, soil, forestry, greenhouse gas emission and more make s this possible

# Key elements behind the framework

- **Principle 4. Collect information on existing donor interventions**

FAO will work with partners to develop a sub-national database of donor activities

- **Principle 5. Develop a geospatial platform**

A web-based dashboard provides a suite of geospatial data for use by all countries and partners, promoting transparency and collaboration

- **Principle 6. Develop a prioritization metric for interventions**

The proposed metric is hunger

# Framework

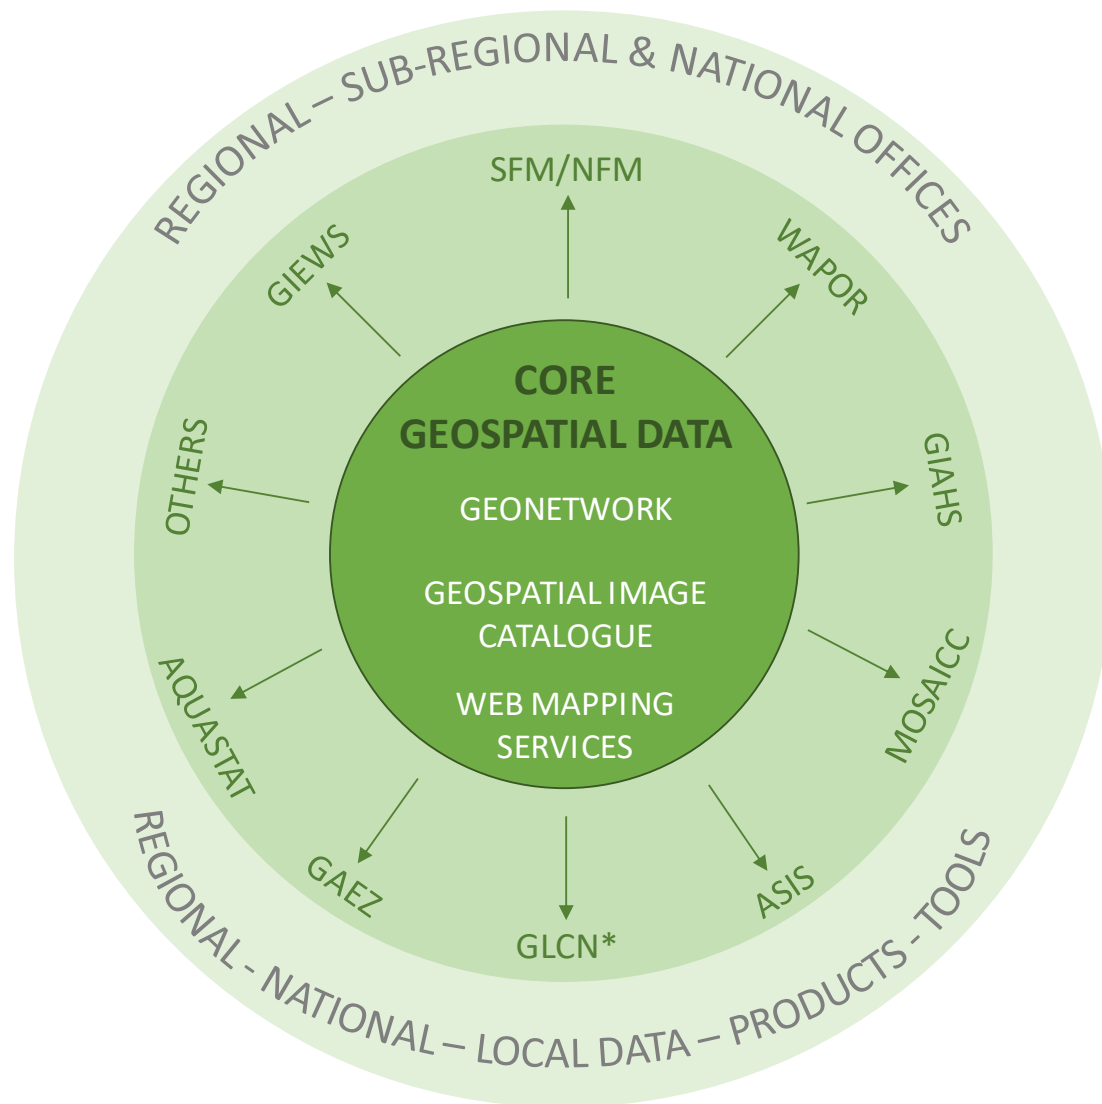

Recall the initial objective

Low-potential and  
low-average efficiency

High-potential and  
low-average efficiency

- Critical, lacking agricultural potential
- Medium priority, no agricultural opportunities
- Low priority
- Low priority, with agricultural opportunities
- Medium priority, with agricultural priorities
- High priority
- High performance

# Geospatial platform

Note: **GIEWS**: Global Information and Early Warning System of Food and Agriculture; **SFM/NFM**: Sustainable Forest Management and National Forest Monitoring System; **WAPOR**: Water Productivity Open Access Portal; **GIAHS**: Global Important Agriculture Heritage Systems; **MOSAICC**: Modelling System for Agricultural Impacts of Climate Change; **ASIS**: Agricultural Stress Index System; **GLCN**: Global Landover Network; **GAEZ**: Global Agro-ecological Zones; **AQUASTAT**: AQUASTAT is the FAO global information system on water resources and agricultural water management; and **OTHER**: All other geospatial databases from our partners.

# Innovation data lab

- Uses artificial intelligence and access to remote sensing to collect data where little data is available
- Collects data to validate official data FAO uses, creating a mechanism for data quality control.
- 3 streams of work on the use of big data and data science
  - Text-mining techniques
  - Geospatial data science
  - Big data solutions (web scrapping, crowdsourcing, machine learning)

# Global and country task forces

Coordinate support across the organization

## Composition of players in countries:

- Governments
- Donors
- Private Sector
- MDBs (WBG, IAD, AFDB)
- Academic institutions
- Civil Society organizations

## Composition of task forces of FAO:

- Country office lead
- Regional office lead
- Investment centre
- HQ coordinator
- Sector specific leads

# Roundtables

To bring all the stakeholders together to define the Initiative's priorities and investment gap

- The Roundtable identifies best practices, key impediments and a plan to address constraints and gaps.
- The Roundtable develops a Program Investment Plan (including an umbrella funding plan and identified investors)
- The Roundtable aligns the Hand-in-Hand Initiative's involvement with the national government's development priorities and the UN Sustainable Development Cooperation Framework.

# Monitoring and evaluation system

- FAO is developing a dashboard initiative to capture, analyze and visualize data on interventions and their impact.
- It will use a red-yellow-green scorecard system.
  -  Red indicates that a country is off track and off target to meet SDG1 and SDG2.
  -  Yellow means on track, but off target.
  -  Green means on track and on target. Burkina Faso's target is to reduce the poverty rate from 43.7% to 21.7% by 2023. Currently, it has a green mark.
- The first benchmarks will be released in 2023.

# Countries

## Beneficiary countries as of July 2020

Burkina Faso

Ecuador

El Salvador

Ethiopia

Guatemala

Haiti

Honduras

Kiribati

Lao PDR

Mali

Nepal

Pakistan

Papua New Guinea

Solomon Islands

Tajikistan

Tuvalu

Yemen

Zimbabwe

# CONCLUSIONS

- **Tailor-made made interventions** at the core of HiH
- **GIS Platform-** validated on the ground, through local diagnostics and policy processes
- **Match-making**
- **Strengthening institutional capacity** on the ground not only strategic, but fundamental - public, farmer, and other stakeholders' institutions
- **Partnership** - HiH aims to be a catalyzer of cross-sectoral coordination, foster coherent development actions, under common vision
