

Addressing Soft Infrastructure:

AfDB's Experience and Lessons

Learned

Presentation by: Zodwa F. Mabuza (AfDB)

STRATEGIC FRAMEWORK

Corporate

Ten Year Strategy (TYS)

- ✓ Inclusive growth
- ✓ Transition to green growth

Bank's High-5

Light-up and power Africa
Feed Africa
Industrialize Africa
Integrate Africa
Improve the quality of life
for the people of Africa

Integrate Africa Hi-5

Regional Integration Strategic Framework (RISF 2018-2025)

- Infrastructure connectivity (hard & soft)
- Trade, Investment
- Financial integration

Strategic & programming documents

Regional Integration
Strategy Papers (RISPs)

Country Strategy Papers (CSPs)
-RMCs

The African Development Bank has supported the development of transport corridors over a number of years as part of its mandate

Hard infrastructure alone is not enough – hence emphasis is on ensuring the mainstreaming of soft infrastructure issues in physical transport projects

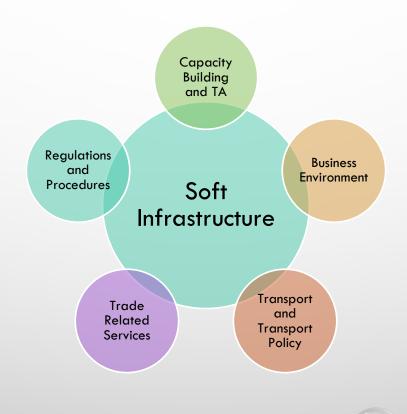

Under the Africa Development Fund (ADF), there is a requirement to set aside 10 percent of total project cost for soft infrastructure

WHAT ARE SOFT ISSUES?

IMPORTANCE OF SOFT INFRASTRUCTURE

Investments in transport infrastructure seek to promote economic growth through lowering trade costs, stimulating trade and increasing efficiencies..

Supports RI and Economic Development –
Encourages Govts to enforce common
transport policies and regulations – enhances
corridor and multimodal efficiencies

TRADE AND TRANSPORT FACILITATION DUE DILIGENCE TOOL

The Bank developed a Trade and Transport facilitation Due Diligence Tool in 2019

The objective of the Tool is to ensure soft infrastructure, defined as trade and transport policies, trade-related services, regulations and procedures, improvements in the business environment, and capacity-building activities are mainstreamed throughout the physical infrastructure project cycle

It is also meant to assist transport project managers to mainstream regulatory policies and other related soft infrastructures issues along the project route

The mainstreaming of soft infrastructure happens throughout the project cycle

USING THE DUE DILIGENCE TOOL: PROJECT IDENTIFICATION

Does the team understand the existing policy and regulatory environment?

Do the preliminary social and environmental assessments consider policy, regulatory, institutional and human capacity issues?

Does the project identification team include a regional integration economist?

What is the capacity (and the commitment) of the implementing agency to effectively integrate soft infrastructure into the project scoping?

Have all the stakeholders been consulted during the initial identification and mapping?

USING THE DUE DILIGENCE TO PROJECT DESIGN/APRAISAL

Establish baseline data on transport and trade costs for moving goods and people

Identify the policy and regulatory framework and their power relationships

Designate staff in project coordination teams who can ensure that trade and transport facilitation is integrated into project design

Make institutional arrangements for the design of the project to ensure the integration of soft infrastructure by briefing all staff on the Trade and Transport Facilitation Due Diligence Tool and by including soft infrastructure as a standing item on all quarterly progress reports

Include indicators relating to existing incomes, production, investment, the business-enabling environment, and access to social services (health and education)

USING THE DUE DILIGENCE TOOL: PROJECT IMPLEMENTATION & MONITORING

IMPLEMENTATION INDICATORS

- STAKEHOLDER CONSULTATIONS FOR PROJECT PLANNING AND IMPLEMENTATION
- IDENTIFICATION OF POLICY AND REGULATORY CONSTRAINTS
- IDENTIFICATION OF TRAINING AND CAPACITY-BUILDING REQUIREMENTS
- INSTITUTIONAL ARRANGEMENTS FOR IMPLEMENTATION AND ONGOING MAINTENANCE

OUTPUT INDICATORS

- INCREASE IN THE VOLUME AND VALUE OF GOODS TRANSPORTED AND THE NUMBER OF MEN AND WOMEN USING THE INFRASTRUCTURE
- INCREASE IN THE NUMBER OF MEN AND WOMEN WITH ACCESS TO APPROPRIATE PHYSICAL INFRASTRUCTURE
- INCREASE IN INVESTMENT, PRODUCTION, EMPLOYMENT, AND INCOME-GENERATING ACTIVITIES
- IMPROVED ACCESS TO HEALTH AND EDUCATION FACILITIES AND OTHER SOCIAL SERVICES

USING THE DUE DILIGENCE TOOL: PROJECT EVALUATION —IMPACT INDICATOR

Reduction in the prices of staple foods, agricultural inputs, and consumer goods

Reduced time and cost for moving goods (basic commodities/consumer products) to market

Reduced time and cost for men and women to reach the market

Increased investment in the infrastructure catchment area

Increased income for the population resident in the infrastructure catchment area

Increased security for communities in the region

Reduced number of trafficrelated accidents

Increase in school enrolment rates and improved maternal and child health

Reduction in morbidity rates

DUE DILIGENCE CATEGORIES

Assessing the Political Economy issues around the infrastructure

Trade Agreements for goods and services

Trade and Transport Facilitation

Complementary Measures

Corridor Governance and Markets

1. POLITICAL ECONOMY ASSESSMENT

Ensure that **all** the key stakeholders are identified

Understand their power relationships

Identify potential
"winners" and "losers" –
enables compensatory
or mitigation measures
to be addressed

Who is driving the project? What is their level of commitment (evidence)?

TRADE AGREEMENT FOR GOODS AND SERVICES

Identify the trade agreements applicable along the corridor

Identify the tariffs along the route

Identify the products currently traded and potential products, and who is trading

Identify the regulations governing cross-border trade in services

Identify the legal and regulatory policies applicable to ICT and data transfer

3. TRADE AND
TRANSPORT
FACILITATION: TRADE
POLICY, BORDER
POSTS AND CUSTOMS
MODERNIZATION

| Issue | Information Required/Sources | Indicative Response/Intervention |
|---|--|---|
| Are tariffs applied at border posts along the proposed route? | Tariff Policies, Customs Schedules, DTIS reports, WTO TPRM reports | Regional commitments/AfCTFA/RE C protocol |
| Are the border facilities adequate for the expected increase in traffic flows? | # of agencies present at the border Border processing procedures Gender responsiveness Current state of automation | Institutional reform-OSBP, integrated border management |
| What is the status of trade facilitation (WTO –TFA)? | Trade Facilitation Assessment | AEO, advance clearance, risk assessment |
| Transit regime | Benchmark procedures | Regional bond scheme, regulatory reform |
| Is trade-related information readily available? Identify key performance indicators? | Nature of existing trade (product/traders) Data on clearance times, delays, costs | Support transport corridor secretariat |

3. TRADE AND **TRANSPORT FACILITATION: NON-TARIFF** MEASURES, **TRANSPORT POLICY**

| Issue | Information Required | Indicative Response/Intervention |
|--|---|---|
| Technical Regulations | List of controlled commodities (by HS code) and certification requirements Review Non-Tariff Database (MAST –WITS/UNCTAD), and regional databases | Recommend streamlining and simplifying procedures through automation and electronic submission Harmonization of technical regulations, promote mutual recognition/equivalence |
| Sanitary and Phytosanitary measures and arrangements | Review the NTM databases SPS Requirements for moving products along the corridor | Recommend streamlining and simplifying procedures through automation and electronic submission, exchange of data, mutual recognition/equivalence, etc. |
| Tax treatment on goods and services along the corridor | Tax policies and regulations | Possible policy reforms to encourage intra-regional trade |
| Trucking sector competitiveness along the corridor | Transport regulations, cabotage, use of foreign drivers, transport safety, structure of the trucking sector along the corridor | Regulatory reforms, capacity building, access to finance |

4. COMPLEMENTARY MEASURES

- IDENTIFY MEASURES THROUGH MEETING WITH GOVERNMENT OFFICIALS, PRIVATE SECTOR INVESTORS, SMALL SCALE TRADERS, AND CIVIL SOCIETY REPRESENTATIVES.
- ACCESS EXISTING INTERNATIONALLY ACCEPTED INDICATORS-FOR EXAMPLE, WORLD BANK DOING BUSINESS, LOGISTICS PERFORMANCE INDICATORS.
- ACCESS TO ESSENTIAL BUSINESS INFRASTRUCTURE (ENERGY, BUILDINGS, LAND)
- UNDERSTAND THE COMPETITIVENESS OF MARKET STRUCTURES (EASE OF ENTRY)
- IDENTIFY INDIVIDUALS/GROUPS WHO MAY BE ADVERSELY
 IMPACTED BY THE PROPOSED NEW INFRASTRUCTURE

5. CORRIDOR GOVERNAN CE AND MARKETS

| Issue | Information Required | Indicative Response/Intervention |
|---|--|--|
| Management of the transport corridor (institutional structure and capacity), reporting requirements | Lessons learn from transport corridors in Africa (Bank evaluation reports, Multi-donor Sub-Saharan Africa Transport Policy Program (SSATP) reports. | Institutional support, capacity building Develop a charter for the secretariat /observatory |
| Operation and maintenance of the transport corridors | Publications from existing Corridor Management Units/Observatories — Annual Reports | Institutional Strengthening, capacity building Role of Logistics Service Providers |

LESSONS LEARNT

Mainstreaming is vital, but can only be successful if informed by robust upstream diagnostics:

- Reforms require upstream dialogue
- Need to mobilize funds and partnerships for this upstream work (the 10% from the RO should be for implementation)

Collaboration with a wide range of stakeholders (including DPs) is key

 Also means leveraging partnerships and designing stand alone TF projects Strengthen capacity of the executing agencies, but also internally in the Bank

 To effectively add value to TMs and Regional Team Corridor approach is key:
Before the border, at the
border, beyond the border. The
whole range of trade and
transport policies

• Transport policies, transit regimes, NTBs, etc.

THANK YOU!!!
