CONCLUSIONS

- The Law of the Sea great achievement for oceans 1982, the world continues the dynamism of human beings, demanding more knowledge and governance, in this specific case, of the oceans.
- To prioritize the improvement and facilitation of communicational processes between ocean organisms at national, regional or global levels, by the simple process of open invitations.
- There are constructive examples around the world to show how it is possible to have a positive communication approach to ensemble policies with science for effective results to benefit humanity.
- Important to develop assessments for decision making in order to keep clear the communication between science and policy.
