

SDG7 Energy Compact of the United Arab Emirates A next Decade Action Agenda to advance SDG7 on sustainable energy for all, in line with the goals of the Paris Agreement on Climate Change

SECTION 1: AMBITION

1.1. Ambitions to achieve SDG7 by 2030. [Please select all that apply, and make sure to state the baseline of each target]

(Member States targets could be based on their NDCs, energy policies, national five-year plans etc. targets for companies/organizations could be based on their corporat

□ 7.1. By 2030, ensure universal access to	Target(s): UAE population with access to electricity
affordable, reliable and modern energy	Time frame: 2030
Services.	Context for the ambition(s): 100% of UAE population with access to electricity by 2030
	Target(s): UAE population with primary reliance on clean fuels and technologies for cooking by2030
	Time frame: 2030
	Context for the ambition(s): 100% of UAE population primary reliance on clean fuels and technologies for cooking by20
□ 7.2. By 2080, increase substantially the share of renewable energy in the global	Target(s): Renewable energy share in the total final energy consumption
	Time frame: 2030
energymix.	Context for the ambition(s): Generating 2.5 GW from solar energy in building sector by 2030
	In 2017, the UAE launched 'Energy Strategy 2050', which is considered the first unified energy strategy in the country the demand. The strategy aims to increase the contribution of clean energy in the total energy mix from 25 per cent to 50 p carbon footprint of power generation by 70 percent, thus saving AED 700 billion by 2050. It also seeks to increase consumindividuals and corporates by 40 per cent.
	The strategy targets an energy mix that combines renewable, nuclear, and clean energy sources to meet the UAE's ecor
	environmental goals as follows:
	• 44 per cent clean energy
	38 per cent gas
	12 per cent clean coal
	• 6 per cent nuclear.
	The UAE government aims to invest AED 600 billion by 2050 to meet the growing energy demand and ensure a sustaina economy.
	The key objectives of the Energy strategy included the Energy Security, Energy Affordability, as well as he the impact on importantly, the Energy Strategy 2050 seeks to cultivate a collective, coordinated planning process among all UAE Emira goals towards our beloved nation.

te strategy)	
2030	
that is based on supply and per cent by 2050 and reduce sumption efficiency of	
onomic requirements and	
nable growth for the country's	
on climate change. Most irates to fulfill our national	

7.3. By 2030, double the global rate of improvement in energy efficiency.	Target(s): Energy efficiency in 3 main sectors	
	Time frame: 2030	
	Context for the ambition(s): Energy efficiency in (building, manufacturing, transportation) sectors will be 24% by 2030	
	The indicator measures the intensity of primary energy consumption and is calculated on the basis of (domestic production of primary energy + imports + changes in stocks - exports - fuel supplied to ships and aircraft participating in international transport) relative to the population (kg of oil equivalent)	
	The National Water and Energy Demand Management Programme targets 40 per cent efficiency of the three most energy-consuming sectors in the UAE: transport, industry and construction.	
	The programme includes three main pillars: Energy, water and consumption rationalization.	
	Several initiatives will be launched to reduce energy consumption and realize the following targets by 2050:	
	reduce energy demand by 40 per cent	
	 increase the renewable energy's contribution to the energy mix to 50 per cent expand water re-use by 95 per cent. 	
	The programme combines all stakeholders in the UAE to realize the objectives of the UAE Energy Strategy 2050 and UAE Water Security Strategy 2036.	
7.a. By 2030, enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology.	Target(s): Time frame: Context for the ambition(s): Not Applicable	
7.b. By 2030, expand infrastructure and upgrade technology for supplying modern and sustainable energy services for all in developing countries, in particular least developed countries, small island developing States, and land-locked developing countries, in accordance with their respective programs of support.	Target(s): Time frame: Context for the ambition(s):	

1.2. Other ambitions in support of SDG7 by 2030 and net-zero emissions by 2050. [Please describe below e.g., coal phase out or reforming fossil fuel subsidies etc.]

1. Target(s): Reduction of 23.5% in GHG emissions for the year 2030, relative to BAU.

Time frame: Up to 2030

Context for the ambition(s): This is the economy-wide emissions reduction target included in the UAE Second Nationally Determined Contribution to the Paris Agreement. It encompasses planned actions up to 2030 in energy, industry, waste, agriculture and land use change and forestry. UAE's steady economic diversification is yielding co-benefits for both climate mitigation and adaptation. The NDC target is closely tied with SDG7, with expansion of clear energy a key component of UAE's climate goals.

2. Target(s): Manage greenhouse gas (GHG) emissions while sustaining economic growth; Increase climate resilience by minimizing risks and improving adaptive capacity; Advance the UAE's economic diversification agenda through innovative solutions.

Time frame: Up to 2050

Context for the ambition(s): These are the key objectives of UAE's National Climate Change Plan 2017-2050. With mitigation as one of its key pillars, the Plan has direct linkages with SDG7 indicators. With a view on adaptation, the Plan also encompasses increasing the resilience of energy infrastructure. As part of the country's National Adaptation Program, federal and local entities are taking steps to strengthen adaptive capacity of the energy sector by developing smart infrastructure and services and upgrading existing infrastructure.

SECTION 2: ACTIONS TO ACHIEVE THE AMBITION

2.1. Please add at least one key action for each of the elaborated ambition(s) from section 1. [Please add rows as needed].

Launches National Integrated Energy Model	202
The National Integrated Energy Model has been launched by the UAE Ministry of Energy and Infrastructure, in partnership with Khalifa	
University (KU) and the International Renewable Energy Agency (IRENA). The model will outline the future of Energy for the UAE and the	
design of the next 50 years in the energy sector, according to the vision of the future government. It will represent a roadmap for a new phase	
of energy sector sustainability. The model is important because it provides a common framework that brings together stakeholders in the	
energy sector. It is also said to define the contours of the future, as part of the UAE's efforts to maximize the benefits of the sector by	
developing strategies and foundations during the next phase, in line with the National Energy Strategy 2050. The National Integrated Energy	
Model is a major supporter of the national energy strategy that was launched in 2017; work is currently under process on developing a	1
national energy strategy to harmonise developments in the energy sector at local and global levels, and it takes into account the UAE's	
orientation towards diversifying energy sources and developing the sector, finding various solutions in addition to traditional energy, in a way	
that supports sustainable development, national economies, and the country's passage to the next 50 years of achievements, up to the UAE	
Centennial 2071.	202
Review of the UAE energy strategy 2050	202
The ministry is working currently into the reviewing process for the UAE energy strategy 2050 to ensure UAE's sustainable ambitions relate to	
the country's long-term goals of economic diversification and technological advancement: UAE Energy Strategy 2050. The National Energy	
Strategy 2050 has been developed to achieve the government's vision of developing United Arab Emirates (UAE) as one of the most	
advanced, green, and sustainable society. The Energy Strategy 2050 supports and develops upon UAE's current targets in the climate and	1
energy sector, which include the Vision 2021 National Agenda targets as well as UAE's commitments towards global emission reduction.	
Establish the UAE Energy outlook	202
National Water and Energy Demand Management Programme	202

2 - 2023	
2 - 2023	
2 - 2023	
2 - 2023 1 -2050	

The National Water and Energy Demand Management Programme, which was approved by the Federal Cabinet to enhance the efficiency of the three most energy-consuming sectors by 40 percent. Rolled out in cooperation with strategic partners and stakeholders of the federal and local governments and the private sector, the programme targets 40 percent efficiency of the three most energy-consuming sectors in the UAE: transport, industry, and construction. The programme will adopt the best international standards in the nation's largest water and energy efficiency drive. The programme includes three main pillars: Energy, water, and consumption rationalisation. Several initiatives will be launched to reduce energy consumption and realize the following targets by 2050: reduce energy demand by 40 percent; increase the renewable energy's contribution to the energy mix to 50 percent and expand water reuse by 95 percent

Targets 1.2 (1, 2): multi-stakeholder, multi-sectoral engagement to ensure alignment of federal and emirate-level activities towards the national goal of emission reduction enshrined in the NDC; engagement with private sector on both mitigation and adaptation priorities.

SECTION 3: OUTCOMES

3.1. Please add at least one measurable and time based outcome for each of the actions from section 2. [Please add rows as needed].

Dutcome	Date
	2050
The National Energy strategy, in 2021, The Ministry of Energy and Infrastructure has renewed its commitment to.	
- The strategy aims to increase the contribution of clean energy in the total energy mix from 25 per cent to 50 per cent by 2050	
 Reduce carbon footprint of power generation by 70 percent, Saving AED 700 billion by 2050 	
	2050
The National DSM Program	
- Enhance the efficiency of the three most energy-consuming sectors by 40 percent.	
- Reduce energy demand by 40 percent	
- Increase the renewable energy's contribution to the energy mix to 50 percent	
- Expand water reuse by 95 percent	
Targets 1.2 (1, 2):	
Reduction in UAE's emissions and fulfilment of its international commitments on climate	2030
Economic activities and sectoral development plans are in line with UAE's climate and sustainable energy goals.	2050

SECTION 4: REQUIRED RESOURCES AND SUPPORT

4.1. Please specify required finance and investments for <u>each</u> of the actions in section 2.

All the actions mentioned above are financed through the UAE Government with participation of all local entities and main stakeholders. The UAE government with participation of all local entities and main stakeholders. The UAE government 600 billion by 2050 to meet the growing energy demand and ensure a sustainable growth for the country's economy.

4.2. [For countries only] In case support is required for the actions in section 2, please select from below and describe the required support and specify for which action.

[Examples of support for Member States could include: Access to low-cost affordable debt through strategic de-risking instruments, capacity building in data collection; development of integrated energy plans and energy transition pathways; technical assistance, etc.]

rnment aims to invest

SECTION 5: MPACT

5.1. Countries planned for implementation including number of people potentially impacted.

The actions determined in Section 2 are planned for implementation in the UAE with an impact of more than 9,282,410 people.

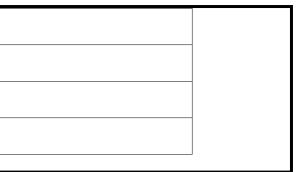

52. Alignment with the 2080 Agenda for Sustainable Development – Please describe how each of the actions from section 2 impact advancing the SDGs by 2080. [up to 500 words, please upload supporting strategy documents as needed]

UAE launched 'Energy Strategy 2050', which is considered the first unified energy strategy in the country that is based on supply and demand. The strategy aims to increase the contribution of dean energy in the total energy mix from 25 per cent to 50 per cent by 2050 and reduce carbon footprint of power generation by 70 percent, thus saving AED 700 billion by 2050. It also seeds to increase consumption efficiency of individuals and corporates by 40 per cent. The strategy targets an energy mix that combines renewable, nuclear and dean energy sources to meet the UAE's economic requirements and environmental goals as follows: 44 per cent dean energy 38 per cent gas 12 per cent clean coal 6 per cent nuclear.

ANationalWater and Energy DemandWanagement Programme has been developed with the target of 40% reduction in energy and 50% reduction in water over business as usual by 2050. Significantly the proposed DSM program balances between the needs of each Emirate, with the requirement of consistency and alignment to support lower costs, investment, and sustainability. The proposed DSM program targets four key areas of focus - "pillars"- as having the greatest potential for impact: 1. Agriculture – Paradigm shift from unsustainable abstraction of groundwater to sustainable management of groundwater, by balancing water and food security requirements, promoting efficient

- irrigation and using alternative water resources
- 2. Built Environment-Optimizing energy and water efficiency within the urban environment through increased phasing in of green building, retrofitting existing building stock, replacing fixtures and equipment and improving public and private imigation practices
- Industry-Fostering responsibility and accountability within industry through regulatory and transparency requirements to encourage efficiency, sustainability and implementation of best practice to driveenergyefficiency
- 4. Transport-It is noted that the Transport Element may be held from implementation pending alignment with the forthcoming UAE Transport Strategy due to be released in 2019

UAENational Energy Strategy 2050 ensure achieving the Sustainable development goals especially SDG 6, 7 and 11 and to rise the quality of life in UAE. The UAE adopts and shares an inspiring vision with the rest of the countries worldwide, working to achieve the UNS stainable Development Goals (SDGs) 2080, and mitigate the effects of climate change and global warming. To achieve this, the National Energy Strategy 2050 have been launched to consolidate sustainable development and shift to clean energy.

53. Alignment with Paris Agreement and net-zero by 2050 - Please describe how each of the actions from section 2 align with the Paris Agreement and national NDCs (if applicable) and support the net-zero emissions by 2050. [up to 500 words, please upload supporting strategy documents as needed]

The United Arab Emirates (UAE) submitted its first Nationally Determined Contribution (NDQ) in 2015, in accordance with Decisions 1/CP.19 and 1/CP.20 and submitted its second NDC submission in 2020. The UAE's second NDC reflects enhanced ambition with the indusion of an economywide emission reduction target in response to the guidance outlined in Article 4.4 of the Paris Agreement. The UAE intends to reduce its greenhouse gas (GHG) emissions for the year 2030 by 23.5%, relative to the Business-As-Usual (BAU) scenario. Consistent with the approach adopted under Article 4.7 of the Paris Agreement. the UAE's climate ambition is underpinned by the country's steady economic diversification, yielding co-benefit's for both dimaternitigation and adaptation.

There are strong linkages and synergies between UAE's actions contributing towards smeeting the goals of SDG7 and those contributing towards SDG13. The expansion of clean energy in the UAE, with concerted efforts in development of renewable and nuclear energy, and increase in efficiency of energy production and use, is a key contributor to UAE's NDC target and its commitments under the Paris Agreement. As the UAE continues to register economic growth, the country is following an approach that embeds sustainable energy and dimate action as a priority across government entities and promotes the development and deployment of sustainable energy solutions across the public and private sectors.

SECTION 6: MONITORING AND REPORTING

6.1. Please describe howyou intend to track the progress of the proposed outcomes in section 3. Please also describe if you intend to use other existing reporting frameworks to track progress on the proposed outcomes.

All actions mentioned in section 2 are linked to Ministry National short-term strategy and the wider Strategy for UAE Government and are explained dearly through separate project charters with defined milestones and timelines. Progress of these actions are monitored monthly, as part of the UAE Government strategy monitoring requirements and is reported on a frequent basis.

Targets 12 (1, 2): The UAE's G-Gemission inventories will support the tracking of progress on emissions reduction, from energy as well as other sectors. The country is also looking to build a mitigation VRV system.

SECTION 7: GUIDING PRINCIPLES CHECK LIST

Please use the checklist below to validate that the proposed Energy Compact is aligned with the guiding principles.

1. Stepping up ambition and accelerating action - Increase contribution of and accelerate the implementation of the SDG7 targets in support of the 2080 Agenda for Sustainable Development for Paris Agreement

- I. 1. Does the Energy Compact strengthen and/or add a target, commitment, policy, action related to SDG7 and its linkages to the other SDGs that results in a higher cumulative impact compared to existing frameworks? ⊠Yes⊡No
- 1.2. Does the Energy Compact increase the geographical and/or sectoral coverage of SDG7 related efforts? \boxtimes Yes \Box No
- 1.3. Does the Energy Compact consider inclusion of key priority issues towards achieving SDG7 by 2030 and the net-zero emission goal of the Paris Agreement by 2050 as defied by latest global analysis and data including the outcome of the Technical Working Groups? \boxtimes Yes \Box No
- II. Alignment with the 2030 agenda on Sustainable Development Goals Ensure coherence and alignment with SDG implementation plans and strategies by 2080 as well as national development plans and priorities.
 - II.1. Has the Energy Compact considered enabling actions of SDG7 to reach the other sustainable development goals by 2030? \boxtimes Yes \Box No
 - II.2. Does the Energy Compact align with national, sectoral, and/or sub-national sustainable development strategies/plans, including SDG implementation plans/roadmaps? 🛛 Yes 🗆 No
 - II.3. Has the Energy Compact considered a timeframe in line with the Decade of Action? \boxtimes Yes \Box No
- III. Alignment with Paris Agreement and net-zero by 2050 Ensure coherence and alignment with the Nationally Determined Contributions, long terminet zero emission strategies.
 - III.1. Has the Energy Compact considered a timeframe in line with the net-zero goal of the Paris Agreement by 2050? \boxtimes Yes \Box No
 - III.2. Has the Energy Compact considered energy-related targets and information in the updated/enhanced NDCs? \boxtimes Yes \Box No
 - III.3. Has the Energy Compact considered alignment with reaching the net-zero emissions goal set by many countries by 2050? \boxtimes Yes \Box No

IV. Leaving no one behind, strengthening inclusion, interlinkages, and synergies - Enabling the achievement of SDGs and just transition by reflecting interlinkages with other SDGs.

IV.1. Does the Energy Compact include socio-economic impacts of measures being considered? \boxtimes Yes \Box No

IV.2. Does the Energy Compact identify steps towards an inclusive, just energy transition? \boxtimes Yes \Box No

IV.3. Does the Energy Compact consider measures that address the needs of the most vulnerable groups (e.g. those impacted the most by energy transitions, lack of energy access)? 🛛 Yes 🗆 No

V. Feasibility and Robustness - Commitments and measures are technically sound, feasible, and verifiable based a set of objectives with specific performance indicators, baselines, targets and data sources as needed.

V.1. Is the information included in the Energy Compact based on updated quality data and sectoral assessments, with clear and transparent methodologies related to the proposed measures? 🛛 Yes 🗆 No

V.2. Has the Energy Compact considered inclusion of a set of SMART (specific, measurable, achievable, resource-based and time based) objectives? 🛛 Yes 🗆 No

V.3. Has the Energy Compact considered issues related to means of implementation to ensure feasibility of measures proposed (e.g. cost and financing strategy, technical assistant needs and partnerships, policy and regulatory gaps, data and technology)? Set a No

SECTION 8: ENERGY COMPACT GENERAL INFORMATION

8.1. Title/nameof the Energy Compact

UAE leads on global dimate action through green economy plans

82. Lead entity name (for joint Energy Compacts please list all parties and include, in parenthesis, its entity type, using entity type from below)

Ministry of Energy and Infrastructure		
8.3. Leadentity type		
⊠ Goverment	□ Local/Regional Government	□ Multilateral body/Intergoverma
□ NonGoverrmental Organization (NGO)	Civil Society organization/Youth	\Box Academic Institution/Scientific G
□ Private Sector		□ Other relevant actor

8.4. Contact Information

EngNaval Yousit Alhanaee, naval.alhanaee@moei.gov.ae

8.5. Please select the geographical coverage of the Energy Compact

□Africa □Asia and Pacific □Europe □Latin America and Caribbean □North America ⊠West Asia □Global

8.6. Please select the Energy Compact thematic focus area(s)

 \boxtimes Energy Access \boxtimes Energy Transition \boxtimes Enabling SDGs through indusive just Energy Transitions \boxtimes Innovation, Technology and Data \square Finance and Investment.

SECTION 9: ADDITIONAL INFORMATION (IF REQUIRED)

Please provide additional website link(s) on your Energy Compact, which may contain relevant key documents, photos, short video dips etc. https://moei.gov.ae/

ets and data sources as needed.
