

United Nations

HIGH-LEVEL DIALOGUE ON ENERGY
UNITED NATIONS, NEW YORK, SEPTEMBER 2021

SIGN UP FORM

NO NEW COAL ENERGY COMPACT

In 2021, at the United Nations High-Level Dialogue on Energy, Sri Lanka, Chile, Montenegro, Denmark, UK, France and Germany signed the No New Coal Energy Compact committing to not building any new and additional coal power projects. The Compact, coordinated jointly with the Powering Past Coal Alliance and UN-Energy, targets additional signatories as a way for countries to demonstrate their commitment and leadership towards a clean energy transition.

- I. The No New Coal Energy Compact is a **voluntary commitment** for countries to demonstrate their leadership and participation in the global clean energy transition.
- II. This commitment is in line with the United Nations Secretary-General's call for No New Coal power production, even as **just and inclusive transition plans** are developed.
- III. For countries that have already moved away from or are not currently dependent on coal-fired power, this Compact demonstrates their commitment to **staying the course** towards a clean energy future.
- IV. This Compact represents an opportunity for all **countries to unite around global net-zero goals** as well as highlights individual leadership in the just energy transition by growing energy demand alongside advancing development of sustainable energy.
- V. By joining you confirm that your government **supports action** towards the following:
 - Cease issuance of **new permits** for unabated coal-fired power generation projects immediately.
 - Cease **construction** of new unabated coal-fired power generation projects as of the end of the year [of signing].
- VI. With this voluntary commitment, your government also expresses its intent to **support UN-Energy** in advancing these principles recognising:
 - The importance of Sustainable Development Goal 7 – ensure access to affordable, reliable, sustainable and modern energy for all. As achieving this goal is realised by 2030, it must go hand-in-hand with other goals of Agenda 2030 on climate action and public health, and others.
 - New coal-fired power capacity is incompatible with meeting the goals of the Paris Agreement, as recognised by the United Nations Secretary-General's call for countries to halt construction of new coal-fired power . Additionally, new unabated coal-fired power generation is not compatible with achieving SDG7 and interlinked SDGs.
 - Countries and communities in the developing world require support in realising a sustainable and economically inclusive energy future without coal power generation and that international co-operation will be needed to provide such support.
- VII. Signatories to will be listed on the Energy Compact registry website at un.org/energycompacts.
