COVID-19 VACCINATION
Protect Yourself & The Community

COVID-19 VACCINATION SAVES LIVES

Vaccination reduces the risks of infection, especially severe infection that leads to hospitalisation.

This will help keep our hospitals and healthcare facilities from being overwhelmed.

Vaccinated people are probably less likely to transmit COVID-19.

Enough vaccinated people can reduce the spread.

The community will be safer, especially for those who cannot be vaccinated.

Vaccination can contribute to a safe & gradual reopening of the economy & society.

COVID-19 VACCINES ARE SAFE AND EFFECTIVE

All COVID-19 vaccines have to undergo rigorous testing as follows:

3 phases of clinical trials

Approval process of Stringent Regulatory Authorities

National drug regulation authority which is considered by the WHO to apply stringent standards for quality, safety and efficacy in its process of regulatory review of drugs and vaccines for marketing authorisation.

While vaccination is voluntary, all who are eligible are encouraged to be vaccinated.

Seek facts, backed by research and data, published by credible health care providers and organisations.

Avoid spreading misinformation.

WHO  ECDC  CDC

If you have any questions or doubts about COVID-19 vaccination, reach out to your trusted doctors and health providers for clarification.
