Chapeau

Tianjin Eco-city Friend of Green Eco-Culture Promotion Association will continue to follow the development philosophy of integration, innovation, participation, and sharing, and actively carry out relevant activities and strengthen the cooperation with international organizations with the aim to cope with the impact of climate change and accelerate the full implementation of the 2030 Agenda for Sustainable Development at all levels. Although many actions have been taken, some of the anthropological activities still intensify vulnerability to climate changes. We call for action-oriented measure should be taken to the wider range to mitigate the impact and identify the routes to map the approaches for the future actions. To achieve, we come up with the input of the Pact of Future

Chapter I. Sustainable development and financing for development

Sustainable Development is profound and unprecedented reform for the society, economy as well as the environment with its depth and breadth. It is also a human reflection and expectation for the future not only a conceptual framework but also the lighthouse for the economic prosperity, social harmony and environmental balance, which contains the reverence for nature, the responsibility for the future, and the pursuit of a harmonious world.

We promise to continue playing our advantages over the Marine protection, maintenance of the ecological diversity, youth environmental and climate education, as well as the popularization and the promotion of environmental-friendly products, etc. On the basis of the previous practice, we reaffirm our commitment to strengthen the public participation and expand the influence on people's awareness of sustainable development.

We promise to prioritize development, and be the practitioner of the Sustainable Development Goals. We need to align the 2030 Agenda with our development strategy to achieve higher-quality and more sustainable development.

We call for and explore a new financial mode with innovative and financing option to put the money on the right place and receive matching outcome.

Chapter II. International peace and security

International peace and security is an issue of widespread concern, concerning political, economic and military relations among countries around the world.

1. International cooperation: The international community needs to strengthen cooperation to jointly address global challenges, such as climate change, infectious diseases, terrorism and transnational crimes. Through international organizations and multilateral mechanisms, countries can work together to formulate and implement solutions to safeguard global peace and security.

2. Conflict prevention: Conflict prevention is the key to maintaining peace and security. The international community needs to take measures to prevent tensions from escalating into an all-out conflict. This may involve diplomatic efforts, mediation, and negotiations.

3. Protecting human rights: Human rights are an important part of international peace and security. Countries should respect human rights and protect them through legal and democratic mechanisms. At the same time, the international community should take action to prevent human rights violations.

4. Combating terrorism: Terrorism is one of the major threats to international peace and security. The international community needs to take action to combat all forms of terrorism and to eliminate its root causes.

5. International law and international order: International law and international order are the basis for safeguarding international peace and security. States should abide by international law and maintain the international order in order to promote peace and cooperation.

6. Economic cooperation and development: Economic development is one of the important factors in maintaining international peace and security. Countries can promote global economic growth and reduce poverty through economic cooperation and development, thereby reducing the risk of social inequality and conflict.

In short, international peace and security requires the joint efforts and maintenance of all countries around the world. This can be achieved by strengthening international cooperation, preventing conflicts, safeguarding human rights, combating terrorism, nuclear disarmament and non-proliferation, observing international law and order, and promoting economic cooperation and development.

Chapter III. Science, technology and innovation and digital cooperation

Science, technology, innovation and digital cooperation are interrelated and mutually reinforcing aspects. They are playing an increasingly important role in modern society, especially in promoting economic development, improving the quality of life and improving social efficiency.

1. Science is the knowledge base for exploring and understanding natural phenomena and inventing new technologies. Scientific research continues to advance our understanding of the world by proposing hypotheses, designing experiments, collecting and analyzing data. At the same time, science also provides basic theoretical support for technological innovation.

2. Technology is an important means to commercialize scientific research results and an important force to promote social progress. With the continuous development of science and technology, people's way of life, working style and even the way of thinking are undergoing profound changes. For example, the development of the Internet, artificial intelligence and other technologies has greatly improved the quality of people's lives and also changed the basic way society operates.

3. Innovation is a key factor driving scientific and technological development. Innovation is not only the invention of new technologies or new products, but also a recombination and optimization of existing knowledge and technologies. This spirit of innovation exists not only in researchers and engineers, but also in entrepreneurs, artists and even ordinary consumers.

4. Digital cooperation is an important mechanism for promoting the development of science, technology and innovation. Digital collaboration helps researchers, technicians and innovators more effectively conduct research and development by sharing data, knowledge and resources. This cooperation can greatly improve research efficiency, reduce development costs, and help promote the globalization of scientific and technological innovation.

In today's digital and information age, the combination of science, technology, innovation and digital cooperation has become an important driving force to promote social progress. With the continuous progress of science and technology and the continuous development of the spirit of innovation, we can look forward to more breakthrough achievements and surprises in the future.

Chapter IV. Youth and future generations

Youth and future generations are two different groups, and the relationship between them is an important way of transmitting and perpetuating human civilization.

Young people are the future and hope of the society. They have vitality and creativity, and they are an important force to promote social progress and development. The growth and development of the young generation is crucial to the future of a country or society. Therefore, we should pay attention to the education and cultivation of young people and provide them with a good environment and opportunities to grow up.

Future generations are the future youth, they are an important force to inherit and carry forward human civilization. The future of a family, a country or a nation depends on the cultivation and development of its descendants. We should pay attention to the growth and education of future generations, provide them with a good family education and social environment, cultivate their moral character, quality and ability, and lay a solid foundation for their future.

Therefore, we should attach attention to the cultivation and development of young people and future generations, provide them with a good education and growth environment, and make positive contributions to the future of human beings.

Chapter V. Transforming global governance

Global governance, like a nuanced blanket, weaves the interests of all parts of the world to form a harmonious and complex pattern. It has gone beyond the shackles of national boundaries and culture, and integrates the global power and wisdom to cope with the challenges and crises hidden in every corner.

On this blanket, the international community is no longer a cold spectator, but an enthusiastic participant. They use cooperation instead of conflict, consensus instead of differences, and mutual assistance instead of independence. Global governance is a gift from them to the world and a seed they sow for the future of mankind.

The concept of sustainable development, like a clear stream, runs through every link of global governance. It enables economic development and environmental protection to promote each other, and makes social progress and ecological balance interdependent. This kind of harmony, like a beautiful picture scroll, showing the beautiful vision of harmonious coexistence between mankind and nature.

At the same time, global governance is also actively responding to the major challenge of climate change. The international community is looking for effective ways to meet this challenge with unprecedented determination and wisdom. They know that only by working together can the earth go back to green and the ecology go back to balance.

In this process, global governance education, like a wise mentor, leads us to deeply understand the connotation and value of global governance. It teaches us to look at the world from a new perspective, accept differences with an inclusive attitude, and solve conflicts in a wise way.

In general, global governance is the call of The Times and the expectation of mankind. It makes the world more closely linked together, and makes mankind more brave to face the challenges in the future. On this magnificent carpet, we look forward to seeing a better scenery and to creating a more harmonious, more prosperous and sustainable future with our partners around the world.
