Despite an increase in global climate finance flows of 17% (2015–2016), compared with 2013–2014, investment in fossil fuels continues to be higher than investment in climate activities.

The global mean temperature in 2018 is approximately 1°C above the pre-industrial baseline.

Climate-related and geophysical disasters claimed an estimated 1.3 million lives between 1998 and 2017.

Atmospheric CO₂ concentration is 146% of pre-industrial levels (2017).

To limit global warming to 1.5°C, global carbon emissions need to fall to 55% of 2010 levels by 2030 and continue a steep decline to zero net emissions by 2050.

Despite an increase in global climate finance flows of 17% (2015–2016), compared with 2013–2014, investment in fossil fuels continues to be higher than investment in climate activities.

186 Parties have ratified the Paris Agreement.
